# 1001 Interesting Islands

*The adventurers, relaxing at last after weeks of hard and dangerous work, are enjoying their current task. In the sloop Swallow, they have been cruising around through numerous small tropical islands, looking for the brother of their patron, who was last seen heading for this area with what he believed was a treasure map.*

GM: You're coming up on the largest island you've visited to date. It looks to be ten or twelve miles in diameter, with a volcanic peak at the center from which a faint trickle of smoke is rising. As you pass the north end, you see a jutting outcrop of rock that resembles a skull.

Party Leader: This may be the place. *(after consulting with other players)* We'll continue sailing around the island and see if there's a protected cove on the west side; that's what was supposedly on Jorgen's map.

Cleric: If there is a cove, maybe I can find some time to do some more fishing. A fish fry on the beach would be delicious.

Warrior: You and your fishing. We could be facing down a giant crocodile and you'd want to know if the fishing was any good in its pond. \*grumbles\*

GM: Yes, after a little while you see the cove you're expecting on the western side of the island.

Party Leader: This definitely looks like the place. We're going to drop anchor, go ashore, and start searching for signs of Jorgen and his companions.

GM: I think the pirates who have a small base there may have something to say about that....

This is a collection of 1001 islands of all shapes and sizes. They range from tiny atolls only a few acres in size to mountainous islands measuring hundreds of square miles. They might have only sand and a few palm trees, or active volcanoes, high waterfalls, and native villages. There are castaways, treasure hunters, and, yes, pirates to be found there, not to mention the occasional giant crocodile, or giant ape.

This collection is much more flexible in time and place than many of the others, which are primarily focused on fantasy, especially OSR-type fantasy, milieus. The islands could certainly be in any type of fantasy world. But they would also fit in perfectly to an early 20th-century pulp adventure campaign, or one set in the modern day, or even in a spacefaring game – with 1001 of them, you have enough to equip an entire watery planet! An island could be home to a necromancer, a millionaire recluse, a villain building a secret base, smugglers, outlaws, or just about anyone and anything else.

The natives could be anything from indigenous people to far-future colonists, with various sorts of industries ranging from whaling to phosphate mining providing reasons for settlements in the recent past, along with scientific research of all types. They could be friendly, hostile, or somewhere in between, which might depend on the relationship, if any, between the country they're affiliated with and the players' own. And then there are those enigmatic ruins....

With this many options, this list is necessarily rather generic. It is also heavily weighted toward interesting islands; adventures, after all, rarely happen in boring places, so there are a lot fewer barren atolls and a lot more large, mountainous islands than there are in the real world. You should, of course, add and remove special features as you desire: maybe you don't want the locals worshiping a giant ape, or you want a waterfall with a cave behind it on an island that doesn't happen to have one. Customize away!

To use this list, you can either start at the top of the list and use them in order, roll three different colors of d10 (treating 10 as 0), or just pick something that strikes your fancy.

***These items were created using our program TableMaster, available at your friendly local game store (tell them to inquire about trade discounts), or on the Wintertree Software website if your FLGS absolutely will not special-order it for you. The table that created them is a modified version of the Islands table from an unreleased table pack.***

# 1001 Interesting Islands

1: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a wooden sculpture of a chief facing toward the sea on the southern shore, and strange ancient ruins.

2: This medium-sized island, 70 square miles in area, is mountainous, and has two active volcanos. It is almost rectangular in shape, with a cove on the northeastern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, a coral sculpture of a chief facing toward the sea on the northwestern shore, a rock outcrop shaped like a skull on the southeast end of the island, a volcanic crater with a lava lake and fire fountains, and a coral sculpture of a local legendary figure facing south at the center of the island. A shipwrecked castaway is living in a lean-to on the southwestern shore. A closer look will reveal a crude grave marker on the southeastern end of the island. Digging there reveals only a few old bones.

3: This medium-sized island, 71 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a cove on the southeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a small native village, a stone sculpture of a canoe at the highest point of the island, and a rock outcrop shaped like a man's head on the south end of the island. Further examination will reveal nothing else interesting.

4: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A mutinous sailor who was marooned here is living in a lean-to on the western shore.

5: This medium-sized island, 69 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a crude hut near the highest point of the island. Further examination will reveal marks of a recent canoe landing on the southwestern beach.

6: This medium-sized island, 86 square miles in area, surrounds an active volcano (40% chance of eruption). It is almost oval in shape, with a cove on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a rough hut on the highest point of the island. Further examination will reveal a seabird rookery on some offshore rocks to the southwest.

7: This small island, 7 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly circular in shape, with a barren islet offshore on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include mysterious ancient ruins, and a small native village. Exploration will reveal nothing else interesting.

8: This huge island, 373 square miles in area, surrounds an apparently extinct volcano. It is generally circular in

shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a swampy area. Exploration will reveal a lake in the volcano's crater, and marks of a recent canoe landing on the southwestern beach.

9: This huge island, 441 square miles in area, is mountainous, and has four active volcanos. It is almost circular in shape, with a sea cave on the western side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a 139-foot-tall waterfall, a very fine beach, a lava tube cave, a small native village, and a rock outcrop shaped like a skull on the west end of the island. Exploration will reveal some random flotsam and jetsam on the western beach, and some random flotsam and jetsam on the southwestern beach.

10: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the southern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a very fine beach, and a mysterious shrine that appears to have had offerings left within the past few days. A mutinous sailor who was marooned here is living in a grass hut invisible from the shore on the northeastern side of the island.

11: This medium-sized island, 78 square miles in area, surrounds an apparently extinct volcano. It is almost rectangular in shape, with a sea cave on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. The only feature of note is a very fine beach. An escaped slave from a nearby country is living in a flimsy hut near the highest point of the island. Exploration will reveal nothing else interesting.

12: This large island, 170 square miles in area, surrounds an apparently extinct volcano. It is approximately rectangular in shape, with a sea cave on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a cave, a lava tube cave, and a swampy area. A treasure seeker with a secret map is living in a tent on the western shore. Exploration will reveal the remains of an old camp on the northwest side of the island, and a crude grave marker on the northern end of the island. Digging there reveals only a few old bones.

13: This large island, 167 square miles in area, is mountainous, and has two active volcanos. It is roughly oval in shape, with a cove on the northwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a small native village, now deserted, a rock outcrop shaped like a skull on the northeast end of the island, a very fine beach, and a lava tube cave. Exploration will reveal a human skeleton on the southwestern beach, and some random flotsam and jetsam on the northern beach.

14: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately circular in shape, with a barren islet offshore on the eastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a ship on the southwest end of the island, and a stone sculpture of a squid facing toward the sea on the southern shore.

15: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly circular in shape, with a cove on the southern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a wooden sculpture of a chief facing north at the center of the island, and a very fine beach. A mad scientist is living in a lean-to near the highest point of the island.

16: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a very fine beach, and a mysterious shrine that appears to have had offerings left within the past few days.

17: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above

sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a grass hut on the southeast side of the atoll. Further examination will reveal nothing else interesting.

18: This medium-sized island, 102 square miles in area, surrounds an active volcano (50% chance of eruption). It is irregular in shape, with a sea cave on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. Further examination will reveal some random flotsam and jetsam on the northern beach.

19: This large island, 170 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a small native village, a rock outcrop shaped like a man's head on the southeast end of the island, and strange ancient ruins. A shipwrecked castaway is living in a crude hut on the northeastern shore. Exploration will reveal some random flotsam and jetsam on the southwestern beach, and mysterious text chisled into a rock on the northeastern end.

20: This small island, 7 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. The only feature of note is high cliffs. An escaped slave from a nearby country is living in a grass hut on the western shore. A closer look will reveal a bottle enclosing a message washed up on a western beach.

21: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a cove on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, mysterious ancient ruins, and a rock outcrop shaped like a skull on the east end of the island.

22: This small island, 10 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately rectangular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include strange ancient ruins, a mysterious shrine that appears to have had offerings left within the past few months, and a coral sculpture of a fishlike humanoid facing south at the highest point of the island. A recluse who is seeking religious enlightenment is living in a grass hut on the southeastern shore. Further examination will reveal traces of a decades-old shipwreck on the southern shore.

23: This huge island, 364 square miles in area, is mountainous, including three apparently extinct volcanos. It is nearly rectangular in shape, with a sea cave on the northeastern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a swampy area, a rock outcrop shaped like a ship on the west end of the island, a mysterious shrine that appears to have had offerings left within the past few months, and mysterious ancient ruins. A prisoner of pirates who was marooned here is living in a lean-to on the highest point of the island. Exploration will reveal marks of a recent canoe landing on the northwestern beach, and mysterious text chisled into a rock on the southwestern end.

24: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the northwest side of the atoll.

25: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

26: This small island, 9 square miles in area, surrounds an active volcano (30% chance of eruption). It is almost circular in shape, with a cove on the southeastern side. Its vegetation consists of bushes and scattered clumps of

palm trees. There is a small freshwater spring. Notable features include a cave, a rock outcrop shaped like a skull on the southeast end of the island, a very fine beach, and a small native village. A closer look will reveal nothing else interesting.

27: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the southwest side of the atoll.

28: This small island, 13 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a small native village, another small native village, a swampy area, and disturbing ancient ruins. Further examination will reveal nothing else interesting.

29: This small island, 16 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. Further examination will reveal nothing else interesting.

30: This small island, 17 square miles in area, surrounds an active volcano (25% chance of eruption). It is generally circular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a cave, and a small native village. A prospector is living in a flimsy hut invisible from the shore on the northeastern side of the island. Exploration will reveal nothing else interesting.

31: This small island, 16 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, mysterious ancient ruins, high cliffs, and a cave. A treasure seeker with a secret map is living in a camp near the highest point of the island. Exploration will reveal some random flotsam and jetsam on the eastern beach.

32: This large island, 156 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly rectangular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a rock outcrop shaped like a ship on the west end of the island. A shipwrecked castaway is living in a rough hut on the southwestern shore. Exploration will reveal a seabird rookery on some offshore rocks to the east, and a substantial amount of driftwood on the northern beach.

33: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the southwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A stowaway who was marooned here is living in a crude hut on the southeastern shore.

34: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and . A shipwrecked castaway is living in a crude hut on the south side of the atoll.

35: This large island, 156 square miles in area, surrounds an active volcano (50% chance of eruption). It is long and narrow in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. An escaped slave from a nearby country is living in a small hut on the southeastern shore. A closer look will reveal hot spring on the southeast side of the volcano, and a bare footprint on the eastern beach.

36: This huge island, 411 square miles in area, surrounds an apparently extinct volcano. It is almost circular in

shape, with a jutting spit of land on the northeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. It has no notable features. Exploration will reveal a substantial amount of driftwood on the western beach, and a lake in the volcano's crater.

37: This small island, 17 square miles in area, surrounds an active volcano (25% chance of eruption). It is roughly oval in shape, with a sea cave on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a 52-foot-tall waterfall, weird ancient ruins, a small native village, and another small native village. Exploration will reveal nothing else interesting.

38: This large island, 155 square miles in area, is mountainous, and has two active volcanos. It is roughly rectangular in shape, with a sea cave on the eastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a cave, a mysterious shrine that appears to have had offerings left within the past few weeks, a native village, and another small native village. An exiled noble from a nearby country is living in a camp invisible from the shore on the northwestern side of the island. Exploration will reveal some random flotsam and jetsam on the northern beach, and a cooking pit containing charred wood and clam shells on the southern beach.

39: This medium-sized island, 78 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There is a freshwater stream. It has no notable features. A shipwrecked castaway is living in a small hut on the highest point of the island. Further examination will reveal a patch of quicksand near a stream to the southeast.

40: This medium-sized island, 86 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a cove on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A mutinous sailor who was marooned here is living in a small hut invisible from the shore on the western side of the island. Further examination will reveal nothing else interesting.

41: This medium-sized island, 104 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost circular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a rough hut on the highest point of the island. Exploration will reveal nothing else interesting.

42: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a chief facing inland on the eastern shore, and a very fine beach. A shipwrecked castaway is living in a crude hut on the southeast side of the atoll.

43: This small island, 17 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a cove on the southeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A stowaway who was marooned here is living in a crude hut on the southwestern shore. Exploration will reveal marks of a recent canoe landing on the northeastern beach.

44: This medium-sized island, 73 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a small native village, now deserted, and a rock outcrop shaped like a man's head on the west end of the island. A treasure seeker with a secret map is living in a flimsy hut invisible from the shore on the northwestern side of the island. Further examination will reveal a substantial amount of driftwood on the southeastern beach.

45: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features

include a mysterious shrine that appears to have had offerings left within the past few days, and a very fine beach.

46: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a lean-to near the highest point of the island.

47: This large island, 146 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, and a mysterious shrine that appears to have had offerings left within the past few days. A shipwrecked castaway is living in a lean-to near the highest point of the island. Exploration will reveal a population of brightly-colored crabs, and a substantial amount of driftwood on the northern beach.

48: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and weird ancient ruins.

49: This huge island, 404 square miles in area, surrounds an active volcano (45% chance of eruption). It is long and narrow in shape, with a barren islet offshore on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and a pond. Notable features include strange ancient ruins, a 55-foot-tall waterfall, a mysterious shrine that appears to have had offerings left within the past few weeks, and a cave. Exploration will reveal a substantial amount of driftwood on the eastern beach, and a bare footprint on the northwestern beach. There is a large pirate base, with 74 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

50: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly circular in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A mad scientist is living in a lean-to near the highest point of the island.

51: This huge island, 393 square miles in area, surrounds an active volcano (10% chance of eruption). It is long and narrow in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and three ponds. Notable features include a small native village, a lava tube cave, and another small native village. A stowaway who was marooned here is living in a grass hut on the highest point of the island. Further examination will reveal a cooking pit containing charred wood and clam shells on the northeastern beach, and a crate containing scientific books, ruined by salt water, washed up on the southeastern beach.

52: This medium-sized island, 97 square miles in area, is mountainous, and has two active volcanos. It is nearly rectangular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and two ponds. Notable features include a very fine beach, a 101-foot-tall waterfall (with a cave behind it), a swampy area, and a very fine beach. A shipwrecked castaway is living in a lean-to on the highest point of the island. Further examination will reveal nothing else interesting.

53: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is anomalous ancient ruins.

54: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few months.

55: This small island, 15 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains

of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a lean-to on the highest point of the island. A closer look will reveal traces of a decades-old shipwreck on the southeastern shore.

56: This small island, 18 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There is a freshwater stream. It has no notable features. A treasure seeker with a secret map is living in a camp invisible from the shore on the western side of the island. Further examination will reveal nothing else interesting.

57: This medium-sized island, 80 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly rectangular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of a few palm trees along the shore. There is a freshwater stream. It has no notable features. A shipwrecked castaway is living in a crude hut on the southeastern shore. Exploration will reveal nothing else interesting.

58: This small island, 20 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a barren islet offshore on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include strange ancient ruins, a mysterious shrine that appears to have had offerings left within the past few months, and a rock outcrop shaped like a skull on the west end of the island. A mad scientist is living in a small hut near the highest point of the island. Further examination will reveal nothing else interesting.

59: This medium-sized island, 86 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the northern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and anomalous ancient ruins. A mutinous sailor who was marooned here is living in a flimsy hut invisible from the shore on the western side of the island. Further examination will reveal a seabird rookery on some offshore rocks to the southeast.

60: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the eastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A madman who lost his reason due to unspeakable horrors and thinks he is a shipwrecked castaway, but is really a mutinous sailor who was marooned here, is living in a grass hut invisible from the shore on the northwestern side of the island.

61: This medium-sized island, 113 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost circular in shape, with a cove on the western side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a small native village, and weird ancient ruins. A shipwrecked castaway is living in a grass hut invisible from the shore on the southern side of the island. Further examination will reveal nothing else interesting.

62: This large island, 166 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly rectangular in shape, with a barren islet offshore on the western side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A recluse who has fled from creditors is living in a rough hut on the highest point of the island. Exploration will reveal mysterious text chisled into a rock on the northeastern end, and a crate containing nothing but sailor's clothes, ruined by salt water, washed up on the northern beach.

63: This large island, 176 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a small native village. A mad scientist is living in a grass hut invisible from the shore on the southeastern side of the island. Exploration will reveal a crate containing nothing but sailor's clothes, ruined by salt water, washed up on the

western beach, and a bottle enclosing a message washed up on a southeastern beach.

64: This large island, 178 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include a small native village, and a very fine beach. Further examination will reveal a bottle enclosing a message washed up on a northern beach, and traces of a decades-old shipwreck on the northwestern shore.

65: This large island, 158 square miles in area, surrounds an active volcano (15% chance of eruption). It is long and narrow in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A madman who lost his reason due to a drug administered to him by someone else and thinks he a scientist who was studying the archaeology of the island, but is really hiding from an enemy, is living in a tent invisible from the shore on the western side of the island. Further examination will reveal a bare footprint on the northeastern beach, and a population of oddly rectangular crabs.

66: This large island, 170 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a sea cave on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a coral sculpture of a squid facing east at the center of the island, and a rock outcrop shaped like a man's head on the southeast end of the island. Further examination will reveal mysterious text chisled into a rock on the northern end, and a human skeleton on the southern beach. There is a large pirate base, with 76 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

67: This large island, 180 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape, with a sea cave on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, and strange ancient ruins. A shipwrecked castaway is living in a lean-to near the highest point of the island. Further examination will reveal a seabird rookery on some offshore rocks to the northeast, and a bottle enclosing a message washed up on a northeastern beach.

68: This large island, 156 square miles in area, surrounds an active volcano (35% chance of eruption). It is almost rectangular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a grass hut on the eastern shore. Further examination will reveal a human skeleton in the southern part of the island, and a crude grave marker on the northwestern end of the island. Digging there reveals only a few old bones.

69: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the eastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include mysterious ancient ruins, a mysterious shrine that appears to have had offerings left within the past few days, and a very fine beach.

70: This large island, 157 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a cove on the southeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A stowaway who was marooned here is living in a rough hut near the highest point of the island. Further examination will reveal a cooking pit containing charred wood and clam shells on the southern beach, and a bottle enclosing a message washed up on a southwestern beach.

71: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and strange ancient ruins.

72: This huge island, 338 square miles in area, surrounds an active volcano (20% chance of eruption). It is long and narrow in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a wooden sculpture of a fish on the eastern shore, a small native village, and another small native village. A prospector is living in a lean-to near the highest point of the island. Exploration will reveal a bare footprint on the eastern beach, and a cooking pit containing charred wood and clam shells on the southwestern beach.

73: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A shipwrecked castaway is living in a grass hut on the east side of the atoll.

74: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is mysterious ancient ruins.

75: This large island, 161 square miles in area, is mountainous, and has two active volcanos. It is almost oval in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a swampy area, a mysterious shrine that appears to have had offerings left within the past few months, a volcanic crater with a lava lake and fire fountains, and a very fine beach. Exploration will reveal marks of a recent canoe landing on the western beach, and a substantial amount of driftwood on the southern beach.

76: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is anomalous ancient ruins.

77: This small island, 17 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a crude hut on the highest point of the island. Exploration will reveal a population of exceptionally large crabs.

78: This medium-sized island, 82 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a flimsy hut invisible from the shore on the southern side of the island. A closer look will reveal some random flotsam and jetsam on the western beach.

79: This medium-sized island, 79 square miles in area, is mountainous, and has two active volcanos. It is roughly rectangular in shape, with a sea cave on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a native village, a mysterious shrine that appears to have had offerings left within the past few weeks, another native village, a 87-foot-tall waterfall, and a coral sculpture of an unrecognizable being facing south at the highest point of the island. Exploration will reveal nothing else interesting.

80: This huge island, 373 square miles in area, is mountainous, and has two active volcanos. It is long and narrow in shape, with a jutting spit of land on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, a cave, a native village, and a mysterious shrine that appears to have had offerings left within the past few months. A madman who lost his reason due to a head injury and thinks he is a shipwrecked castaway, but is really someone who came here seeking religious enlightenment, is living in a lean-to on the southern shore. Further examination will reveal a cooking pit containing charred wood and clam shells on the southern beach, and a crude grave marker on the northwestern end of the island. Digging there reveals only a few old bones.

81: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its

vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the south side of the atoll.

82: This large island, 164 square miles in area, surrounds an active volcano (5% chance of eruption). It is almost circular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a cave. Further examination will reveal a patch of quicksand near a stream to the northeast, and the remains of an old camp on the east side of the island. There is a large pirate base, with 76 permanent residents, on this island. Three pirate ships are anchored offshore, temporarily adding their crews to the population.

83: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

84: This huge island, 368 square miles in area, surrounds an active volcano (30% chance of eruption). It is long and narrow in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a small native village, and a cave. A shipwrecked castaway is living in a crude hut invisible from the shore on the southern side of the island. Further examination will reveal traces of a decades-old shipwreck on the southern shore, and some random flotsam and jetsam on the northwestern beach.

85: This large island, 172 square miles in area, is mountainous, and has four active volcanos. It is nearly circular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, another small native village, a mysterious shrine that appears to have had offerings left within the past few months, and a volcanic crater with a lava lake and fire fountains. Exploration will reveal a patch of quicksand near a stream to the southwest, and a crate containing scientific books, washed up on the northwestern beach.

86: This huge island, 310 square miles in area, surrounds an active volcano (25% chance of eruption). It is nearly rectangular in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and three ponds. Notable features include a rock outcrop shaped like a monkey on the north end of the island, and a small native village. A mutinous sailor who was marooned here is living in a small hut on the western shore. A closer look will reveal a population of brightly-colored crabs, and a seabird rookery on some offshore rocks to the northwest.

87: This huge island, 380 square miles in area, is mountainous, including five apparently extinct volcanos. It is generally rectangular in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a very fine beach, a very fine beach, and a 93-foot-tall waterfall (with a cave behind it). Exploration will reveal a crate containing nothing but sailor's clothes, ruined by salt water, washed up on the western beach, and a bottle enclosing a message washed up on a northern beach. There is a pirate outpost here, occupied by 12 pirates.

88: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is .

89: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is .

90: This huge island, 404 square miles in area, surrounds an apparently extinct volcano. It is almost rectangular in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a lean-to invisible from the shore on the southeastern side of the island. A closer look will reveal some random flotsam and jetsam on

the southern beach, and a bare footprint on the southeastern beach.

91: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

92: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include mysterious ancient ruins, a very fine beach, and a rock outcrop shaped like a skull on the east end of the island.

93: This large island, 171 square miles in area, surrounds an active volcano (15% chance of eruption). It is generally circular in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A recluse who is hiding from the law is living in a lean-to on the highest point of the island. Further examination will reveal a bare footprint on the western beach, and some random flotsam and jetsam on the northeastern beach.

94: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly circular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include anomalous ancient ruins, and a rock outcrop shaped like a skull on the east end of the island. A mad scientist is living in a crude hut on the southwestern shore.

95: This small island, 18 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost rectangular in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There is a freshwater stream. The only feature of note is a very fine beach. A recluse who is hiding from an enemy is living in a crude hut invisible from the shore on the northwestern side of the island. Exploration will reveal nothing else interesting.

96: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the southeast end of the island, and anomalous ancient ruins. A shipwrecked castaway is living in a rough hut on the southwestern shore.

97: This small island, 17 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost circular in shape, with a jutting spit of land on the southern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is seeking religious enlightenment is living in a flimsy hut invisible from the shore on the western side of the island. Further examination will reveal nothing else interesting.

98: This medium-sized island, 122 square miles in area, is mountainous, and has an active volcano. It is roughly oval in shape, with a sea cave on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a swampy area, high cliffs, a 136-foot-tall waterfall, a native village, and a mysterious shrine that appears to have had offerings left within the past few days. Exploration will reveal a crude grave marker on the northern end of the island. Digging there reveals only a few old bones.

99: This medium-sized island, 98 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, and a coral sculpture of a local legendary figure facing south at the highest point of the island. A shipwrecked castaway is living in a lean-to on the southeastern shore. Exploration will reveal marks of a recent canoe landing on the southeastern beach.

100: This medium-sized island, 108 square miles in area, is made up of jutting rocks, which are the mostly-

submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a cove on the eastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include weird ancient ruins, a very fine beach, and a small native village. A closer look will reveal a bare footprint on the southern beach.

101: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and a coral sculpture of a chief facing inland on the eastern shore.

102: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and strange ancient ruins. A shipwrecked castaway is living in a grass hut on the southeast side of the atoll.

103: This huge island, 390 square miles in area, surrounds an apparently extinct volcano. It is almost circular in shape, with a cove on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a 54-foot-tall waterfall, and weird ancient ruins. A closer look will reveal a crate containing nothing but sailor's clothes, washed up on the northeastern beach, and marks of a recent canoe landing on the northeastern beach. There is a large pirate base, with 82 permanent residents, on this island. Three pirate ships are anchored offshore, temporarily adding their crews to the population.

104: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a very fine beach. A prisoner of pirates who was marooned here is living in a rough hut on the highest point of the island.

105: This medium-sized island, 102 square miles in area, is mountainous, and has two active volcanos. It is nearly rectangular in shape, with a sheltered lagoon on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, a small native village, another small native village, and a cave. Further examination will reveal marks of a recent canoe landing on the northwestern beach.

106: This huge island, 476 square miles in area, is mountainous, and has an active volcano. It is long and narrow in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a very fine beach, a very fine beach, weird ancient ruins, a 117-foot-tall waterfall, and a rock outcrop shaped like a skull on the southeast end of the island. A recluse who is hiding from the law is living in a camp on the southwestern shore. A closer look will reveal a seabird rookery on some offshore rocks to the southeast, and a bottle enclosing a message washed up on a southeastern beach.

107: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

108: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. Further examination will reveal a crate containing nothing but sailor's clothes, ruined by salt water, washed up on the southeastern beach.

109: This medium-sized island, 89 square miles in area, is mountainous, and has an active volcano. It is roughly oval in shape, with a cove on the southwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a rock outcrop shaped like a ship on the south end of the island, a volcanic crater with a lava lake and fire fountains, high cliffs, a small native village, and mysterious ancient ruins. A closer look will reveal nothing else interesting.

110: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A recluse who is seeking religious enlightenment is living in a grass hut on the northwest side of the atoll. A closer look will reveal mysterious text chisled into a rock on the northern end.

111: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a barren islet offshore on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features.

112: This large island, 173 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a barren islet offshore on the western side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a small native village, and a very fine beach. A closer look will reveal a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones, and a seabird rookery on some offshore rocks to the north.

113: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the southeast side of the atoll.

114: This medium-sized island, 84 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a crude hut on the northern shore. Further examination will reveal nothing else interesting.

115: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a cove on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a fish on the northwestern shore, and a very fine beach.

116: This small island, 16 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a barren islet offshore on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. The only feature of note is high cliffs. A closer look will reveal a lake in the volcano's crater.

117: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from an enemy is living in a rough hut on the south side of the atoll.

118: This small island, 12 square miles in area, surrounds an active volcano (40% chance of eruption). It is generally oval in shape, with a sea cave on the western side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a small native village. A madman who lost his reason due to a drug administered to him by someone else and thinks he is preparing to conquer the world, but is really someone who came here seeking religious enlightenment, is living in a small hut invisible from the shore on the northeastern side of the island. Exploration will reveal a bare footprint on the northwestern beach.

119: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a cove on the western side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include weird ancient ruins, and a very fine beach. A mad scientist is living in a grass hut invisible from the shore on the southeastern side of the island.

120: This small island, 24 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a sea cave on the western side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the northeastern shore. A closer look will reveal a bottle enclosing a message washed up on a western beach.

121: This huge island, 317 square miles in area, surrounds an active volcano (45% chance of eruption). It is irregular in shape, with a cove on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a small hut on the southwestern shore. A closer look will reveal a patch of quicksand near a stream to the north, and traces of a decades-old shipwreck on the southwestern shore.

122: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and . A recluse who is hiding from an enemy is living in a grass hut on the northeast side of the atoll. A closer look will reveal nothing else interesting.

123: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and a wooden sculpture of a chief facing inland on the eastern shore.

124: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

125: This large island, 176 square miles in area, is mountainous, and has two active volcanos. It is generally rectangular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a swampy area, a very fine beach, a volcanic crater with a lava lake and fire fountains, and a mysterious shrine that appears to have had offerings left within the past few months. An escaped slave from a nearby country is living in a lean-to on the southern shore. A closer look will reveal a crude grave marker on the southern end of the island. Digging there reveals only a few old bones, and a crude grave marker on the western end of the island. Digging there reveals only a few old bones.

126: This small island, 22 square miles in area, surrounds an active volcano (45% chance of eruption). It is long and narrow in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include strange ancient ruins, a small native village, now deserted, high cliffs, and a lava tube cave. A closer look will reveal nothing else interesting.

127: This large island, 157 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a lava tube cave. An escaped slave from a nearby country is living in a small hut invisible from the shore on the northwestern side of the island. A closer look will reveal a human skeleton in the southeastern part of the island, and marks of a recent canoe landing on the northern beach.

128: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and a very fine beach.

129: This small island, 14 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a rock outcrop shaped like a monkey on the east end of the island. A mutinous sailor who was marooned here is living in a small hut invisible from the shore on

the southwestern side of the island. Exploration will reveal some random flotsam and jetsam on the western beach.

130: This large island, 172 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, a stone sculpture of a whale on the northern shore, and anomalous ancient ruins. A closer look will reveal a patch of quicksand near a stream to the north, and marks of a recent canoe landing on the eastern beach. There is a large pirate base, with 95 permanent residents, on this island. Three pirate ships are anchored offshore, temporarily adding their crews to the population.

131: This small island, 23 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A mad scientist is living in a rough hut near the highest point of the island. A closer look will reveal nothing else interesting.

132: This huge island, 378 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a barren islet offshore on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and two ponds. The only feature of note is strange ancient ruins. A closer look will reveal a human skeleton in the northern part of the island, and traces of a decades-old shipwreck on the southern shore. There is a large pirate base, with 87 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

133: This large island, 165 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a coral sculpture of a fishlike humanoid facing north at the center of the island. A shipwrecked castaway is living in a flimsy hut on the northern shore. Exploration will reveal a crude grave marker on the northwestern end of the island. Digging there reveals only a few old bones, and a substantial amount of driftwood on the southwestern beach.

134: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from the law is living in a camp on the southwest side of the atoll. Further examination will reveal nothing else interesting.

135: This large island, 163 square miles in area, surrounds an active volcano (45% chance of eruption). It is irregular in shape, with a cove on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A closer look will reveal the remains of an old camp on the south side of the island, and some random flotsam and jetsam on the northeastern beach. There is a small pirate base, with 32 permanent residents, on this island. No pirate ships are present.

136: This large island, 173 square miles in area, is mountainous, and has two active volcanos. It is approximately rectangular in shape, with a cove on the northeastern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a lava tube cave, a cave, a small native village, and a coral sculpture of a chief facing inland on the southwestern shore. A shipwrecked castaway is living in a small hut near the highest point of the island. Exploration will reveal mysterious text chiseled into a rock on the northern end, and a crate containing a supply of ship's biscuit, full of weevils and waterlogged, washed up on the northern beach.

137: This large island, 167 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the highest point of the island. Exploration will reveal a population of brightly-colored crabs, and a bottle enclosing a message washed up on a northeastern beach.

138: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a barren islet offshore on the southern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features.

139: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

140: This small island, 15 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There is a small freshwater spring. It has no notable features. A stowaway who was marooned here is living in a small hut near the highest point of the island. Further examination will reveal nothing else interesting.

141: This medium-sized island, 83 square miles in area, surrounds an apparently extinct volcano. It is almost rectangular in shape, with a sea cave on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is high cliffs. A prisoner of pirates who was marooned here is living in a rough hut on the highest point of the island. A closer look will reveal nothing else interesting.

142: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include , and a very fine beach.

143: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and . A shipwrecked castaway is living in a grass hut on the west side of the atoll.

144: This large island, 154 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A prospector is living in a grass hut invisible from the shore on the northern side of the island. A closer look will reveal a seabird rookery on some offshore rocks to the northwest, and a lake in the volcano's crater.

145: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few weeks.

146: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly rectangular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a wooden sculpture of a chief facing north at the highest point of the island, a rock outcrop shaped like a skull on the west end of the island, and a very fine beach.

147: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and a rock outcrop shaped like a skull on the southeast end of the island.

148: This small island, 19 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a cove on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a coral sculpture of a chief facing north at the center of the

island, and weird ancient ruins. A shipwrecked castaway is living in a crude hut on the western shore. A closer look will reveal a cooking pit containing charred wood and clam shells on the northern beach.

149: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly rectangular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a rock outcrop shaped like a skull on the northwest end of the island. A shipwrecked castaway is living in a rough hut near the highest point of the island.

150: This medium-sized island, 83 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a rock outcrop shaped like a skull on the southwest end of the island, a coral sculpture of a fish at the highest point of the island, a small native village, and anomalous ancient ruins. A closer look will reveal some random flotsam and jetsam on the western beach.

151: This large island, 170 square miles in area, surrounds an apparently extinct volcano. It is almost rectangular in shape, with a cove on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, and a small native village. A shipwrecked castaway is living in a grass hut on the highest point of the island. Exploration will reveal marks of a recent canoe landing on the eastern beach, and a seabird rookery on some offshore rocks to the southeast.

152: This medium-sized island, 80 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost rectangular in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a very fine beach, and a small native village. A mad scientist is living in a grass hut on the highest point of the island. A closer look will reveal nothing else interesting.

153: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is disturbing ancient ruins. A recluse who is hiding from an enemy is living in a rough hut on the southwest side of the atoll.

154: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few days. A shipwrecked castaway is living in a grass hut on the south side of the atoll.

155: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a cove on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, a mysterious shrine that appears to have had offerings left within the past few days, and a wooden sculpture of a local legendary figure facing north at the highest point of the island.

156: This large island, 169 square miles in area, surrounds an active volcano (30% chance of eruption). It is nearly rectangular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a swampy area, mysterious ancient ruins, and high cliffs. A treasure seeker with a secret map is living in a rough hut near the highest point of the island. Exploration will reveal some random flotsam and jetsam on the southern beach, and a human skeleton on the northern beach.

157: This medium-sized island, 86 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a wooden sculpture of an octopus facing west at the highest point of the island, a

small native village, and a very fine beach. A closer look will reveal traces of a decades-old shipwreck on the northeastern shore.

158: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a small native village, and . A closer look will reveal nothing else interesting.

159: This small island, 16 square miles in area, surrounds an active volcano (5% chance of eruption). It is irregular in shape, with a sea cave on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and another small native village. A closer look will reveal a patch of quicksand near a stream to the north.

160: This medium-sized island, 101 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a very fine beach, and a stone sculpture of a fish at the highest point of the island. Exploration will reveal some random flotsam and jetsam on the northeastern beach. There is a pirate outpost here, occupied by 17 pirates.

161: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and . A shipwrecked castaway is living in a rough hut on the north side of the atoll.

162: This medium-sized island, 92 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a cove on the northeastern side. Its vegetation consists of a few palm trees along the shore. There is a freshwater stream. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few months. A madman who lost his reason due to a head injury and thinks he is a mutinous sailor who was marooned here, but is really a stowaway who was marooned here, is living in a grass hut invisible from the shore on the northern side of the island. Exploration will reveal hot spring on the south side of the volcano.

163: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a lean-to on the eastern shore.

164: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include disturbing ancient ruins, and a mysterious shrine that appears to have had offerings left within the past few months. A recluse who is hiding from an enemy is living in a tent on the east side of the atoll.

165: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the northwest side of the atoll. A closer look will reveal a cooking pit containing charred wood and clam shells on the northwestern beach.

166: This huge island, 388 square miles in area, is mountainous, including three apparently extinct volcanos. It is long and narrow in shape, with a cove on the southeastern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, a lava tube cave, strange ancient ruins, a cave, and a coral sculpture of a chief facing north at the highest point of the island. A madman who lost his reason due to a

head injury and thinks he a scientist who was studying the biology of the island, but is really fleeing from creditors, is living in a lean-to in the jungle on the southern side of the island. Further examination will reveal a bottle enclosing a message washed up on a northeastern beach, and a human skeleton in the southeastern part of the island.

167: This large island, 157 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly circular in shape, with a cove on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a rock outcrop shaped like a skull on the north end of the island, and a small native village. A shipwrecked castaway is living in a flimsy hut on the southwestern shore. Exploration will reveal a patch of quicksand near a stream to the east, and a cooking pit containing charred wood and clam shells on the southeastern beach.

168: This large island, 170 square miles in area, is mountainous, and has two active volcanos. It is generally rectangular in shape, with a sea cave on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a small native village, another small native village, and a 144-foot-tall waterfall. A mutinous sailor who was marooned here is living in a small hut invisible from the shore on the northern side of the island. Exploration will reveal hot spring on the north side of the volcano, and a substantial amount of driftwood on the southern beach.

169: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost circular in shape, with a jutting spit of land on the southern side. Its vegetation consists of open forest. There is a freshwater stream. It has no notable features. A shipwrecked castaway is living in a flimsy hut invisible from the shore on the western side of the island.

170: This large island, 173 square miles in area, surrounds an active volcano (45% chance of eruption). It is nearly rectangular in shape, with a cove on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few weeks. A treasure seeker with a secret map is living in a crude hut on the northern shore. Exploration will reveal a crude grave marker on the northwestern end of the island. Digging there reveals only a few old bones, and some random flotsam and jetsam on the northeastern beach.

171: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few weeks. A prisoner of pirates who was marooned here is living in a small hut invisible from the shore on the eastern side of the island.

172: This small island, 22 square miles in area, surrounds an active volcano (25% chance of eruption). It is generally rectangular in shape, with a barren islet offshore on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, high cliffs, a rock outcrop shaped like a skull on the southwest end of the island, and mysterious ancient ruins. Further examination will reveal nothing else interesting.

173: This huge island, 354 square miles in area, surrounds an active volcano (30% chance of eruption). It is roughly rectangular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, another small native village, a wooden sculpture of a recognizable local legendary figure facing inland on the northwestern shore, and a mysterious shrine that appears to have had offerings left within the past few days. Exploration will reveal the remains of an old camp on the south side of the island, and hot spring on the northeast side of the volcano.

174: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

175: This small island, 11 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost circular in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a very fine beach, and a small native village, now deserted. Further examination will reveal the remains of an old camp on the southeast side of the island.

176: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost oval in shape, with a cove on the western side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a squid facing toward the sea on the western shore, and disturbing ancient ruins.

177: This small island, 15 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a cove on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. The only feature of note is a wooden sculpture of a chief facing toward the sea on the northeastern shore. A madman who lost his reason due to great emotional trauma and thinks he is hiding from an enemy, but is really a scientist who was studying the geology of the island, is living in a lean-to invisible from the shore on the eastern side of the island. A closer look will reveal nothing else interesting.

178: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a wooden sculpture of a chief facing toward the sea on the northwestern shore.

179: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the east side of the atoll. A closer look will reveal nothing else interesting.

180: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a very fine beach. A shipwrecked castaway is living in a grass hut on the north side of the atoll.

181: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and weird ancient ruins.

182: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a cove on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a rock outcrop shaped like a skull on the north end of the island, and a coral sculpture of a squid facing west at the center of the island.

183: This medium-sized island, 104 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a small native village, and a very fine beach. Exploration will reveal nothing else interesting.

184: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

185: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the southwest

side of the atoll.

186: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a barren islet offshore on the southern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a freshwater stream. Notable features include weird ancient ruins, a very fine beach, and a rock outcrop shaped like a ship on the south end of the island.

187: This medium-sized island, 122 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a barren islet offshore on the southwestern side. Its vegetation consists of open forest. There is a small freshwater spring. It has no notable features. A treasure seeker with a secret map is living in a small hut on the southern shore. A closer look will reveal a population of oddly rectangular crabs.

188: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. The only feature of note is mysterious ancient ruins.

189: This small island, 21 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a cove on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a rock outcrop shaped like a ship on the west end of the island. A recluse who is seeking religious enlightenment is living in a small hut on the northwestern shore. A closer look will reveal the remains of an old camp on the west side of the island.

190: This small island, 11 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately circular in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include weird ancient ruins, and a very fine beach. Further examination will reveal marks of a recent canoe landing on the southwestern beach.

191: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include , and a very fine beach.

192: This huge island, 405 square miles in area, surrounds an active volcano (25% chance of eruption). It is generally circular in shape, with a cove on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. The only feature of note is a 66-foot-tall waterfall. A shipwrecked castaway is living in a small hut near the highest point of the island. A closer look will reveal a human skeleton on the eastern beach, and some random flotsam and jetsam on the southeastern beach.

193: This huge island, 374 square miles in area, surrounds an active volcano (35% chance of eruption). It is generally rectangular in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is high cliffs. Further examination will reveal a bottle enclosing a message washed up on a southeastern beach, and a bottle enclosing a message washed up on a southwestern beach. There is a pirate town, with 293 permanent residents, on this island. Three pirate ships are at the docks, arriving, or departing, temporarily adding their crews to the population.

194: This small island, 22 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a sheltered lagoon on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, a small native village, another small native village, and mysterious ancient ruins. Further examination will reveal a population of exceptionally large crabs.

195: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost

oval in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A recluse who has fled from creditors is living in a tent on the northwestern shore.

196: This large island, 167 square miles in area, is mountainous, and has an active volcano. It is approximately rectangular in shape, with a sheltered lagoon on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a rock outcrop shaped like a skull on the north end of the island, a small native village, a very fine beach, and a 81-foot-tall waterfall. Exploration will reveal marks of a recent canoe landing on the northern beach, and a cooking pit containing charred wood and clam shells on the southern beach.

197: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a cove on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include strange ancient ruins, and a rock outcrop shaped like a man's head on the northwest end of the island. A shipwrecked castaway is living in a grass hut near the highest point of the island.

198: This medium-sized island, 114 square miles in area, is mountainous, including two apparently extinct volcanos. It is generally circular in shape, with a cove on the eastern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, a lava tube cave, and anomalous ancient ruins. A closer look will reveal hot spring on the southeast side of the volcano.

199: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost rectangular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a coral sculpture of a crab at the highest point of the island, a rock outcrop shaped like a skull on the southwest end of the island, and a very fine beach.

200: This small island, 18 square miles in area, surrounds an active volcano (20% chance of eruption). It is long and narrow in shape, with a cove on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include strange ancient ruins, a small native village, and another small native village. Exploration will reveal a crate containing nothing but sailor's clothes, washed up on the southern beach.

201: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the south side of the atoll.

202: This medium-sized island, 112 square miles in area, surrounds an active volcano (30% chance of eruption). It is generally oval in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include anomalous ancient ruins, a lava tube cave, a small native village, and a swampy area. Further examination will reveal nothing else interesting.

203: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly circular in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a very fine beach. A shipwrecked castaway is living in a lean-to on the highest point of the island.

204: This medium-sized island, 84 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a very fine beach, a small native village, now deserted, another small native village, and anomalous ancient ruins. Exploration will reveal nothing else interesting.

205: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the southeast side of the atoll.

206: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, and mysterious ancient ruins.

207: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A shipwrecked castaway is living in a grass hut on the east side of the atoll.

208: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a sea cave on the northeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include mysterious ancient ruins, a mysterious shrine that appears to have had offerings left within the past few days, and a rock outcrop shaped like a monkey on the northeast end of the island. A recluse who is hiding from an enemy is living in a tent near the highest point of the island.

209: This medium-sized island, 99 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, and a small native village. Further examination will reveal nothing else interesting.

210: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. Exploration will reveal some random flotsam and jetsam on the eastern beach.

211: This huge island, 366 square miles in area, is mountainous, including three apparently extinct volcanos. It is irregular in shape, with a sheltered lagoon on the western side. Its vegetation consists of a dense jungle. There is a small freshwater spring. Notable features include a small native village, another small native village, a lava tube cave, a rock outcrop shaped like a man's head on the west end of the island, and a mysterious shrine that appears to have had offerings left within the past few weeks. Exploration will reveal a seabird rookery on some offshore rocks to the northwest, and a cooking pit containing charred wood and clam shells on the southwestern beach.

212: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A prisoner of pirates who was marooned here is living in a crude hut on the east side of the atoll.

213: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include , and mysterious ancient ruins. A recluse who is hiding from the law is living in a tent on the southeast side of the atoll. Exploration will reveal nothing else interesting.

214: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is anomalous ancient ruins. A recluse who is hiding from an enemy is living in a tent on the northeast side of the atoll.

215: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no

notable features.

216: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a barren islet offshore on the southwestern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and a coral sculpture of a fish at the center of the island.

217: This medium-sized island, 98 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A mutinous sailor who was marooned here is living in a grass hut on the northeastern shore. Exploration will reveal some random flotsam and jetsam on the northeastern beach.

218: This large island, 167 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a cove on the southeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a small native village, now deserted, and a mysterious shrine that appears to have had offerings left within the past few months. A closer look will reveal a cooking pit containing charred wood and clam shells on the southern beach, and a population of oddly rectangular crabs.

219: This medium-sized island, 95 square miles in area, is mountainous, and has an active volcano. It is generally oval in shape, with a cove on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a rock outcrop shaped like a man's head on the northeast end of the island, a volcanic crater with a lava lake and fire fountains, a small native village, a 87-foot-tall waterfall, and high cliffs. Further examination will reveal a human skeleton on the northeastern beach.

220: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include mysterious ancient ruins, and . A closer look will reveal a population of enormous crabs.

221: This medium-sized island, 84 square miles in area, is mountainous, and has an active volcano. It is generally rectangular in shape, with a sea cave on the southeastern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a fish on the southwestern shore, a mysterious shrine that appears to have had offerings left within the past few months, and a very fine beach. An escaped slave from a nearby country is living in a lean-to on the highest point of the island. A closer look will reveal nothing else interesting.

222: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

223: This large island, 157 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A closer look will reveal some random flotsam and jetsam on the southwestern beach, and a population of brightly-colored crabs. There is a large pirate base, with 77 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

224: This large island, 163 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost rectangular in shape, with a cove on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a lean-to on the northwestern shore. Exploration will reveal a population of oddly rectangular crabs, and a crate containing preserved food, washed up on the northern beach.

225: This huge island, 412 square miles in area, surrounds an active volcano (35% chance of eruption). It is roughly oval in shape, with a sea cave on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. It has no notable features. A treasure seeker with a secret map is living in a crude hut invisible from the shore on the southeastern side of the island. A closer look will reveal a patch of quicksand near a stream to the south, and a population of exceptionally large crabs.

226: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

227: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost circular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include disturbing ancient ruins, and a mysterious shrine that appears to have had offerings left within the past few weeks. A shipwrecked castaway is living in a rough hut on the southern shore.

228: This small island, 19 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A prisoner of pirates who was marooned here is living in a grass hut on the southeastern shore. Exploration will reveal some random flotsam and jetsam on the southern beach.

229: This huge island, 412 square miles in area, is mountainous, and has an active volcano. It is almost rectangular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a native village, a mysterious shrine that appears to have had offerings left within the past few months, another small native village, and another native village. A shipwrecked family is living in a tent invisible from the shore on the southeastern side of the island. A closer look will reveal a population of brightly-colored crabs, and a seabird rookery on some offshore rocks to the northwest.

230: This large island, 173 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. Exploration will reveal a substantial amount of driftwood on the southwestern beach, and a bare footprint on the southwestern beach. There is a large pirate base, with 88 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

231: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the southwest side of the atoll.

232: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and .

233: This large island, 171 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a jutting spit of land on the northern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. The only feature of note is a very fine beach. A recluse who is hiding from the law is living in a flimsy hut on the highest point of the island. Exploration will reveal a bottle enclosing a message washed up on a northwestern beach, and hot spring on the southwest side of the volcano.

234: This medium-sized island, 116 square miles in area, is mountainous, and has three active volcanos. It is

roughly oval in shape, with a cove on the northern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a volcanic crater with a lava lake and fire fountains, a very fine beach, a small native village, now deserted, another small native village, and weird ancient ruins. Further examination will reveal some random flotsam and jetsam on the northwestern beach.

235: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the south side of the atoll.

236: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include anomalous ancient ruins, and a stone sculpture of a squid facing inland on the southern shore. A shipwrecked castaway is living in a grass hut on the north side of the atoll.

237: This medium-sized island, 93 square miles in area, is mountainous, and has two active volcanos. It is generally circular in shape, with a sea cave on the northwestern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, high cliffs, and a rock outcrop shaped like a man's head on the north end of the island. A closer look will reveal the remains of an old camp on the northeast side of the island.

238: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a jutting spit of land on the southern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the highest point of the island.

239: This large island, 157 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a small native village, a rock outcrop shaped like a skull on the west end of the island, and a stone sculpture of a chief facing north at the center of the island. Further examination will reveal the remains of an old camp on the east side of the island, and a bare footprint on the northeastern beach.

240: This medium-sized island, 106 square miles in area, surrounds an apparently extinct volcano. It is nearly rectangular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, another small native village, and a very fine beach. A closer look will reveal a seabird rookery on some offshore rocks to the northeast.

241: This huge island, 361 square miles in area, is mountainous, and has four active volcanos. It is almost rectangular in shape, with a barren islet offshore on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a cave, a lava tube cave, a volcanic crater with a lava lake and fire fountains, a rock outcrop shaped like a skull on the south end of the island, and a native village. A madman who lost his reason due to the effects of a tropical disease and thinks he is preparing to conquer the world, but is really fleeing from creditors, is living in a small hut invisible from the shore on the southeastern side of the island. Exploration will reveal hot spring on the east side of the volcano, and traces of a decades-old shipwreck on the southwestern shore.

242: This large island, 168 square miles in area, is mountainous, including two apparently extinct volcanos. It is approximately rectangular in shape, with a sea cave on the western side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a small native village, another small native village, a swampy area, a mysterious shrine that appears to have had offerings left within the past few days, and a coral sculpture of a local legendary figure facing west at the highest point of the island. Further examination will reveal a patch of quicksand near a stream to the east, and marks of a recent canoe landing on the western beach.

243: This large island, 164 square miles in area, is mountainous, and has two active volcanos. It is nearly circular in shape, with a cove on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, a small native village, strange ancient ruins, another small native village, and a swampy area. Exploration will reveal a bottle enclosing a message washed up on a eastern beach, and a seabird rookery on some offshore rocks to the east.

244: This small island, 13 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a very fine beach, and a small native village, now deserted. A shipwrecked castaway is living in a flimsy hut on the northeastern shore. Further examination will reveal nothing else interesting.

245: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from the law is living in a camp on the northwest side of the atoll.

246: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to the effects of a tropical disease and thinks he a scientist who was studying the archaeology of the island, but is really a shipwrecked castaway, is living in a crude hut on the southwest side of the atoll.

247: This small island, 21 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a barren islet offshore on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include disturbing ancient ruins, and a rock outcrop shaped like a skull on the west end of the island. A prospector is living in a small hut near the highest point of the island. A closer look will reveal traces of a decades-old shipwreck on the southwestern shore.

248: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a sea cave on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a small hut on the northeastern shore.

249: This medium-sized island, 96 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a barren islet offshore on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include weird ancient ruins, a small native village, and a very fine beach. Further examination will reveal traces of a decades-old shipwreck on the western shore.

250: This medium-sized island, 98 square miles in area, is mountainous, and has three active volcanos. It is approximately rectangular in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a very fine beach, a mysterious shrine that appears to have had offerings left within the past few weeks, and a rock outcrop shaped like a ship on the southeast end of the island. A closer look will reveal nothing else interesting.

251: This small island, 8 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly circular in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A mad scientist is living in a crude hut invisible from the shore on the southwestern side of the island. A closer look will reveal the remains of an old camp on the southeast side of the island.

252: This medium-sized island, 96 square miles in area, surrounds an active volcano (5% chance of eruption). It is nearly oval in shape, with a sheltered lagoon on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a 51-foot-tall waterfall, and a small native village. A mutinous sailor who was marooned here is living in a lean-to invisible from the shore on the western side of the island. Further examination will reveal the remains of an old camp on the northwest side of the island.

253: This large island, 151 square miles in area, surrounds an apparently extinct volcano. It is nearly rectangular in shape, with a sea cave on the southern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a small hut on the northeastern shore. A closer look will reveal a patch of quicksand near a stream to the north, and mysterious text chisled into a rock on the southwestern end.

254: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a very fine beach.

255: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from an enemy is living in a tent on the south side of the atoll.

256: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the western side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A stowaway who was marooned here is living in a grass hut invisible from the shore on the northeastern side of the island.

257: This large island, 164 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a jutting spit of land on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. The only feature of note is a small native village. A shipwrecked castaway is living in a rough hut near the highest point of the island. A closer look will reveal a human skeleton on the southeastern beach, and the remains of an old camp on the northwest side of the island.

258: This large island, 153 square miles in area, surrounds an apparently extinct volcano. It is nearly oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and another small native village. A closer look will reveal some random flotsam and jetsam on the southwestern beach, and a lake in the volcano's crater.

259: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a crude hut on the southwest side of the atoll. Further examination will reveal nothing else interesting.

260: This large island, 162 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. It has no notable features. A mad scientist is living in a grass hut invisible from the shore on the southwestern side of the island. Further examination will reveal a bare footprint on the southwestern beach, and a seabird rookery on some offshore rocks to the north.

261: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and . Further examination will reveal some random flotsam and jetsam on the eastern beach.

262: This large island, 165 square miles in area, surrounds an apparently extinct volcano. It is approximately rectangular in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. Exploration will reveal a human skeleton on the western beach, and a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones. There is a large pirate base, with 82 permanent residents, on this island. Three pirate ships are anchored offshore, temporarily adding their crews to the population.

263: This medium-sized island, 74 square miles in area, is mountainous, and has two active volcanos. It is irregular in shape, with a cove on the northeastern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a 111-foot-tall waterfall, a native village, another small native village, a swampy area, and a cave. Further examination will reveal traces of a decades-old shipwreck on the western shore.

264: This large island, 161 square miles in area, is mountainous, and has an active volcano. It is generally oval in shape, with a sea cave on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a 97-foot-tall waterfall, a small native village, another native village, a lava tube cave, and a cave. Exploration will reveal a patch of quicksand near a stream to the southeast, and the remains of an old camp on the northeast side of the island.

265: This medium-sized island, 91 square miles in area, surrounds an active volcano (40% chance of eruption). It is approximately circular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a small native village, a swampy area, and a swampy area. Exploration will reveal nothing else interesting.

266: This large island, 182 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a cove on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, and a very fine beach. Exploration will reveal a substantial amount of driftwood on the northwestern beach, and mysterious text chiseled into a rock on the western end.

267: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a small native village, and a coral sculpture of a squid facing toward the sea on the southeastern shore. A closer look will reveal some random flotsam and jetsam on the eastern beach.

268: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A recluse who has fled from creditors is living in a tent on the southeast side of the atoll.

269: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the southeast side of the atoll.

270: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the southeast side of the atoll.

271: This medium-sized island, 89 square miles in area, surrounds an active volcano (45% chance of eruption). It is generally oval in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, a cave, and a rock outcrop shaped like a skull on the northwest end of the island. A closer look will reveal nothing else interesting.

272: This large island, 177 square miles in area, surrounds an active volcano (15% chance of eruption). It is irregular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a coral sculpture of a chief facing south at the highest point of the island, and a 67-foot-tall waterfall. Exploration will reveal a bare footprint on the southern beach, and a cooking pit containing charred wood and clam shells on the southern beach. There is a small pirate base, with 29 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

273: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost rectangular in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is anomalous ancient ruins.

274: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a lean-to near the highest point of the island.

275: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a barren islet offshore on the northern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and a rock outcrop shaped like a ship on the southeast end of the island. A shipwrecked castaway is living in a flimsy hut on the eastern shore.

276: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a sheltered lagoon on the western side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a very fine beach, and a coral sculpture of a fish at the center of the island. A shipwrecked castaway is living in a flimsy hut invisible from the shore on the northeastern side of the island.

277: This huge island, 389 square miles in area, surrounds an active volcano (15% chance of eruption). It is irregular in shape, with a cove on the western side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include high cliffs, a very fine beach, a small native village, and a coral sculpture of a fish at the highest point of the island. Further examination will reveal a crude grave marker on the northern end of the island. Digging there reveals only a few old bones, and a bottle enclosing a message washed up on a southwestern beach.

278: This large island, 157 square miles in area, is mountainous, and has four active volcanos. It is long and narrow in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and two ponds. Notable features include a native village, another small native village, now deserted, a rock outcrop shaped like a monkey on the west end of the island, a native ritual center, and high cliffs. A closer look will reveal a bare footprint on the southeastern beach, and a cooking pit containing charred wood and clam shells on the northwestern beach.

279: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a wooden sculpture of a chief facing south at the center of the island. A shipwrecked castaway is living in a crude hut on the southwest side of the atoll.

280: This large island, 173 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a sheltered lagoon on the western side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a grass hut near the highest point of the island. Further examination will reveal traces of a decades-old shipwreck on the northeastern shore, and a cooking pit containing charred wood and clam shells on the

southeastern beach.

281: This medium-sized island, 120 square miles in area, is mountainous, and has three active volcanos. It is long and narrow in shape, with a sheltered lagoon on the northern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, anomalous ancient ruins, a rock outcrop shaped like a man's head on the east end of the island, and a cave. Further examination will reveal nothing else interesting. There is a large pirate base, with 107 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

282: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is anomalous ancient ruins. A recluse who is hiding from an enemy is living in a tent on the northeast side of the atoll.

283: This small island, 11 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a monkey on the northwest end of the island, and a stone sculpture of a canoe at the highest point of the island. A mad scientist is living in a crude hut on the highest point of the island. Exploration will reveal marks of a recent canoe landing on the southern beach.

284: This small island, 21 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a cave, and a small native village. A mad scientist is living in a small hut invisible from the shore on the western side of the island. Exploration will reveal the remains of an old camp on the east side of the island.

285: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and a coral sculpture of a crab at the center of the island.

286: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a wooden sculpture of a squid facing west at the center of the island, and a very fine beach.

287: This small island, 11 square miles in area, surrounds an active volcano (35% chance of eruption). It is generally circular in shape, with a barren islet offshore on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a swampy area, a rock outcrop shaped like a skull on the northeast end of the island, a 38-foot-tall waterfall, and a wooden sculpture of a chief facing east at the highest point of the island. Further examination will reveal nothing else interesting.

288: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include anomalous ancient ruins, and . A shipwrecked castaway is living in a crude hut on the northeast side of the atoll.

289: This medium-sized island, 105 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape, with a cove on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include high cliffs, and a small native village. Exploration will reveal some random flotsam and jetsam on the northern beach.

290: This medium-sized island, 86 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly rectangular in shape, with a barren islet offshore on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a very fine beach, and a small native village. Further examination will reveal nothing else interesting.

291: This medium-sized island, 90 square miles in area, surrounds an active volcano (25% chance of eruption). It is roughly rectangular in shape, with a cove on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, now deserted, high cliffs, and a swampy area. A stowaway who was marooned here is living in a small hut invisible from the shore on the northeastern side of the island. Further examination will reveal a population of exceptionally large crabs.

292: This huge island, 351 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape, with a sheltered lagoon on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and three ponds. The only feature of note is a rock outcrop shaped like a ship on the west end of the island. A prospector is living in a flimsy hut invisible from the shore on the eastern side of the island. A closer look will reveal a crate containing nothing but sailor's clothes, washed up on the northwestern beach, and a human skeleton in the western part of the island.

293: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

294: This huge island, 384 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. It has no notable features. A madman who lost his reason due to a drug administered to him by someone else and thinks he is hiding from an enemy, but is really fleeing from creditors, is living in a camp invisible from the shore on the western side of the island. Exploration will reveal some random flotsam and jetsam on the northwestern beach, and a human skeleton on the southern beach.

295: This huge island, 345 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a cove on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, and another small native village. A mad scientist is living in a small hut invisible from the shore on the northwestern side of the island. Further examination will reveal a bottle enclosing a message washed up on a southwestern beach, and hot spring on the west side of the volcano.

296: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a cove on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a wooden sculpture of a whale at the highest point of the island, and disturbing ancient ruins. A mutinous sailor who was marooned here is living in a small hut on the northern shore.

297: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is mysterious ancient ruins.

298: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include strange ancient ruins, and a very fine beach.

299: This medium-sized island, 87 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly rectangular in shape, with a

sea cave on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A prisoner of pirates who was marooned here is living in a flimsy hut invisible from the shore on the northern side of the island. Further examination will reveal some random flotsam and jetsam on the western beach.

300: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and a very fine beach.

301: This medium-sized island, 83 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a cave, and a rock outcrop shaped like a monkey on the southeast end of the island. Exploration will reveal traces of a decades-old shipwreck on the northern shore.

302: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

303: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include disturbing ancient ruins, and .

304: This large island, 162 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a sea cave on the western side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include anomalous ancient ruins, a very fine beach, and a small native village. Further examination will reveal some random flotsam and jetsam on the northwestern beach, and a seabird rookery on some offshore rocks to the southeast.

305: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a cove on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and a very fine beach. A shipwrecked castaway is living in a flimsy hut on the highest point of the island.

306: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the southeastern shore.

307: This small island, 18 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, now deserted, and a mysterious shrine that appears to have had offerings left within the past few days. A shipwrecked castaway is living in a lean-to on the highest point of the island. Further examination will reveal nothing else interesting.

308: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the northeast side of the atoll. A closer look will reveal a crude grave marker on the northern end of the island. Digging there reveals only a few old bones.

309: This huge island, 378 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a cove on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and three ponds. Notable features include a small native village, and another small native village. A closer look will reveal hot spring on the south side of the volcano, and mysterious text chisled into a rock on the eastern end.

310: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is .

311: This medium-sized island, 104 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a barren islet offshore on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a lean-to near the highest point of the island. Further examination will reveal mysterious text chisled into a rock on the western end.

312: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the northern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A stowaway who was marooned here is living in a flimsy hut on the southeastern shore.

313: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to a head injury and thinks he is hiding from an enemy, but is really a shipwrecked castaway, is living in a rough hut on the south side of the atoll.

314: This medium-sized island, 69 square miles in area, surrounds an active volcano (30% chance of eruption). It is long and narrow in shape, with a cove on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, another small native village, now deserted, and a rock outcrop shaped like a man's head on the northwest end of the island. A closer look will reveal some random flotsam and jetsam on the northwestern beach.

315: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include , and .

316: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A shipwrecked castaway is living in a rough hut on the northeast side of the atoll.

317: This medium-sized island, 86 square miles in area, surrounds an active volcano (40% chance of eruption). It is nearly circular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a small hut on the highest point of the island. Exploration will reveal nothing else interesting.

318: This large island, 167 square miles in area, is mountainous, and has four active volcanos. It is nearly oval in shape, with a sea cave on the southwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a small native village, another small native village, another native village, a 104-foot-tall waterfall, and mysterious ancient ruins. A recluse who is hiding from an enemy is living in a small house on the highest point of the island. A closer look will reveal some random flotsam and jetsam on the southern beach, and some random flotsam and jetsam on the northwestern beach.

319: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a cove on the northeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a stone sculpture of a local legendary figure facing west at the highest point of the island, a rock outcrop shaped like a skull on the southeast end of the island, and a very fine beach. A mad scientist is living in a flimsy hut invisible from the shore on the northern side of the island.

320: This large island, 174 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a cove on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a very fine beach. Exploration will reveal mysterious text chisled into a rock on the southeastern end, and a patch of quicksand near a stream to the west.

321: This medium-sized island, 83 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape, with a cove on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, and a very fine beach. A recluse who has fled from creditors is living in a lean-to invisible from the shore on the northern side of the island. A closer look will reveal mysterious text chisled into a rock on the northeastern end.

322: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include weird ancient ruins, and .

323: This medium-sized island, 92 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost circular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A treasure seeker with a secret map is living in a tent near the highest point of the island. Exploration will reveal nothing else interesting.

324: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a barren islet offshore on the southwestern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a grass hut on the southwestern shore.

325: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include weird ancient ruins, and a rock outcrop shaped like a skull on the east end of the island. A mad scientist is living in a crude hut invisible from the shore on the southern side of the island.

326: This small island, 24 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly circular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. Further examination will reveal nothing else interesting.

327: This huge island, 413 square miles in area, is mountainous, and has an active volcano. It is nearly circular in shape, with a cove on the southwestern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and a pond. Notable features include a native village, another small native village, another small native village, a 120-foot-tall waterfall, and a mysterious shrine that appears to have had offerings left within the past few weeks. A closer look will reveal the remains of an old camp on the northwest side of the island, and a seabird rookery on some offshore rocks to the southeast.

328: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and .

329: This large island, 164 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is

generally rectangular in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and a very fine beach. A shipwrecked castaway is living in a small hut on the northern shore. Further examination will reveal a bottle enclosing a message washed up on a southwestern beach, and some random flotsam and jetsam on the northeastern beach.

330: This medium-sized island, 68 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly rectangular in shape, with a sea cave on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a freshwater stream. Notable features include a small native village, and a mysterious shrine that appears to have had offerings left within the past few months. Exploration will reveal some random flotsam and jetsam on the northwestern beach.

331: This huge island, 406 square miles in area, is mountainous, and has four active volcanos. It is roughly rectangular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include anomalous ancient ruins, a very fine beach, and a swampy area. A closer look will reveal some random flotsam and jetsam on the eastern beach, and a human skeleton on the western beach. There is a large pirate base, with 80 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

332: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a chief facing west at the highest point of the island, and a rock outcrop shaped like a ship on the east end of the island.

333: This large island, 160 square miles in area, is mountainous, including three apparently extinct volcanos. It is roughly oval in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very large extinct volcanic crater, a cave, a mysterious shrine that appears to have had offerings left within the past few days, and a native ritual center. A madman who lost his reason due to drink and thinks he came here seeking religious enlightenment, but is really a scientist who was studying the archaeology of the island, is living in a lean-to on the highest point of the island. Exploration will reveal a bottle enclosing a message washed up on a northern beach, and some random flotsam and jetsam on the northeastern beach.

334: This medium-sized island, 81 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a sea cave on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A mutinous sailor who was marooned here is living in a flimsy hut invisible from the shore on the southwestern side of the island. Further examination will reveal nothing else interesting.

335: This medium-sized island, 87 square miles in area, is mountainous, and has an active volcano. It is generally circular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, a volcanic crater with a lava lake and fire fountains, and a very fine beach. A recluse who has fled from creditors is living in a small hut on the highest point of the island. Further examination will reveal a bare footprint on the northwestern beach.

336: This small island, 15 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A madman who lost his reason due to drink and thinks he a scientist who was studying the archaeology of the island, but is really fleeing from creditors, is living in a tent on the southern shore. Exploration will reveal nothing else interesting.

337: This medium-sized island, 96 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a camp invisible from the shore on the western side of the island. A closer look will reveal some random flotsam and jetsam on the western beach.

338: This medium-sized island, 59 square miles in area, is mountainous, and has an active volcano. It is long and narrow in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include strange ancient ruins, a swampy area, and a small native village. A mad scientist is living in a lean-to invisible from the shore on the northern side of the island. Further examination will reveal mysterious text chisled into a rock on the eastern end.

339: This large island, 169 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a 65-foot-tall waterfall (with a cave behind it), a wooden sculpture of a whale at the highest point of the island, a small native village, and another small native village. A prisoner of pirates who was marooned here is living in a lean-to near the highest point of the island. Exploration will reveal a population of oddly rectangular crabs, and a crate containing nothing but sailor's clothes, washed up on the eastern beach.

340: This medium-sized island, 105 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include weird ancient ruins, a mysterious shrine that appears to have had offerings left within the past few months, and a lava tube cave. A closer look will reveal a crate containing 307 silver coins, washed up on the southeastern beach.

341: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from an enemy is living in a camp on the east side of the atoll.

342: This huge island, 391 square miles in area, is mountainous, and has an active volcano. It is generally oval in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a small native village, a 108-foot-tall waterfall (with a cave behind it), and a swampy area. A mad scientist is living in a small house on the highest point of the island. Further examination will reveal some random flotsam and jetsam on the western beach, and a human skeleton in the northeastern part of the island.

343: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a barren islet offshore on the northern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a rock outcrop shaped like a skull on the northeast end of the island, a coral sculpture of a recognizable local legendary figure facing toward the sea on the southeastern shore, and strange ancient ruins. A shipwrecked castaway is living in a flimsy hut on the southeastern shore.

344: This medium-sized island, 87 square miles in area, surrounds an apparently extinct volcano. It is nearly rectangular in shape, with a jutting spit of land on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a coral sculpture of a local legendary figure facing south at the highest point of the island, a small native village, a swampy area, and a cave. Further examination will reveal nothing else interesting.

345: This huge island, 350 square miles in area, is mountainous, and has four active volcanos. It is generally circular in shape, with a barren islet offshore on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a native ritual center, a giant ape, and a small native village. A closer look will reveal a crude grave marker on the northeastern end of the island. Digging there reveals only a few old bones, and some random flotsam and jetsam on the northeastern beach.

346: This large island, 149 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly rectangular in shape, with a cove on the southern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a small native village, a very fine beach, and mysterious ancient ruins. Further examination will reveal traces of a decades-old shipwreck on the eastern shore, and some random flotsam and jetsam on the southwestern beach.

347: This small island, 21 square miles in area, surrounds an apparently extinct volcano. It is almost circular in shape, with a barren islet offshore on the northern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a lean-to invisible from the shore on the southern side of the island. Further examination will reveal a population of oddly rectangular crabs.

348: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, a mysterious shrine that appears to have had offerings left within the past few days, and a rock outcrop shaped like a skull on the southeast end of the island. A mad scientist is living in a rough hut invisible from the shore on the southern side of the island.

349: This medium-sized island, 102 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, a swampy area, a rock outcrop shaped like a skull on the northeast end of the island, and a lava tube cave. Further examination will reveal hot spring on the northeast side of the volcano. There is a small pirate base, with 27 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

350: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the eastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features.

351: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few months. A shipwrecked castaway is living in a grass hut on the east side of the atoll.

352: This large island, 176 square miles in area, is mountainous, and has an active volcano. It is generally oval in shape, with a sheltered lagoon on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, a giant snake, a small native village, and a mysterious shrine that appears to have had offerings left within the past few weeks. Further examination will reveal mysterious text chisled into a rock on the western end, and a crate containing a supply of ship's biscuit, full of weevils and waterlogged, washed up on the northern beach.

353: This large island, 170 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately rectangular in shape, with a sea cave on the northeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A mad scientist is living in a grass hut on the southwestern shore. Exploration will reveal a cooking pit containing charred wood and clam shells on the northern beach, and a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones.

354: This medium-sized island, 84 square miles in area, is mountainous, and has three active volcanos. It is generally rectangular in shape, with a sea cave on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, a cave, a swampy area, high cliffs, and a 135-foot-tall waterfall. Further examination will reveal a cooking pit containing charred wood and clam shells

on the western beach.

355: This large island, 173 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost rectangular in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a rough hut invisible from the shore on the southwestern side of the island. Further examination will reveal a cooking pit containing charred wood and clam shells on the southwestern beach, and a human skeleton in the southeastern part of the island.

356: This large island, 157 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost circular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include a small native village, and a very fine beach. A stowaway who was marooned here is living in a grass hut near the highest point of the island. Further examination will reveal hot spring on the north side of the volcano, and a bare footprint on the western beach.

357: This medium-sized island, 114 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost circular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There is a small freshwater spring. The only feature of note is a coral sculpture of a chief facing east at the center of the island. A shipwrecked castaway is living in a rough hut near the highest point of the island. Exploration will reveal a substantial amount of driftwood on the eastern beach.

358: This small island, 11 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a crude hut near the highest point of the island. Exploration will reveal a crude grave marker on the southeastern end of the island. Digging there reveals only a few old bones.

359: This small island, 21 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the northern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a small native village, now deserted. Exploration will reveal a patch of quicksand near a stream to the northwest.

360: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to drink and thinks he is preparing to conquer the world, but is really a shipwrecked castaway, is living in a grass hut on the southeast side of the atoll.

361: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from the law is living in a grass hut on the north side of the atoll.

362: This small island, 25 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a swampy area. A madman who lost his reason due to a head injury and thinks he is hiding from an enemy, but is really the last survivor of an expedition to the island, is living in a tent on the eastern shore. Exploration will reveal nothing else interesting.

363: This small island, 16 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a cove on the southwestern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A mad scientist is living in a rough hut near the highest point of the island. Exploration will reveal nothing else interesting.

364: This medium-sized island, 100 square miles in area, surrounds an active volcano (5% chance of eruption). It is generally oval in shape, with a sea cave on the northern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. Further examination will reveal nothing else interesting. There are signs that pirates have visited this island, but there are none here now.

365: This huge island, 393 square miles in area, is mountainous, and has an active volcano. It is generally rectangular in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, a giant crocodile, a 88-foot-tall waterfall, high cliffs, and a rock outcrop shaped like a ship on the southwest end of the island. Exploration will reveal marks of a recent canoe landing on the western beach, and mysterious text chisled into a rock on the northwestern end.

366: This medium-sized island, 78 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of a few palm trees along the shore. There is a freshwater stream. Notable features include a very fine beach, and a small native village. A prisoner of pirates who was marooned here is living in a grass hut on the highest point of the island. Further examination will reveal a human skeleton in the eastern part of the island.

367: This medium-sized island, 81 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a wooden sculpture of a local legendary figure facing east at the center of the island. A shipwrecked castaway is living in a rough hut invisible from the shore on the northern side of the island. A closer look will reveal a crude grave marker on the eastern end of the island. Digging there reveals only a few old bones.

368: This huge island, 354 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape, with a sea cave on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, strange ancient ruins, and a very fine beach. A closer look will reveal hot spring on the southeast side of the volcano, and the remains of an old camp on the southeast side of the island. There is a large pirate base, with 75 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

369: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the northwest side of the atoll. Further examination will reveal nothing else interesting.

370: This large island, 172 square miles in area, surrounds an active volcano (20% chance of eruption). It is roughly circular in shape, with a sea cave on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a swampy area, a small native village, weird ancient ruins, and high cliffs. Exploration will reveal some random flotsam and jetsam on the eastern beach, and traces of a decades-old shipwreck on the northern shore.

371: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a barren islet offshore on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A stowaway who was marooned here is living in a flimsy hut invisible from the shore on the southern side of the island.

372: This large island, 175 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a very fine beach. Exploration

will reveal a crude grave marker on the northeastern end of the island. Digging there reveals only a few old bones, and a crude grave marker on the northeastern end of the island. Digging there reveals only a few old bones.

373: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a tent invisible from the shore on the eastern side of the island.

374: This large island, 156 square miles in area, surrounds an apparently extinct volcano. It is almost rectangular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, and a rock outcrop shaped like a skull on the northwest end of the island. A closer look will reveal a population of brightly-colored crabs, and a patch of quicksand near a stream to the northwest. There is a large pirate base, with 82 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

375: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a cove on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A mutinous sailor who was marooned here is living in a small hut on the southeastern shore.

376: This large island, 171 square miles in area, surrounds an apparently extinct volcano. It is almost rectangular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A closer look will reveal a crate containing preserved food, washed up on the northwestern beach, and a cooking pit containing charred wood and clam shells on the eastern beach. There is a pirate outpost here, occupied by 17 pirates. A pirate ship is anchored offshore, temporarily adding its crew to the population.

377: This small island, 9 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, a very fine beach, and a lava tube cave. Further examination will reveal traces of a decades-old shipwreck on the southeastern shore.

378: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the south side of the atoll.

379: This large island, 161 square miles in area, is mountainous, and has two active volcanos. It is nearly rectangular in shape, with a cove on the northern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a small native village, a rock outcrop shaped like a skull on the northeast end of the island, a coral sculpture of a local legendary figure facing east at the highest point of the island, and another small native village. Further examination will reveal mysterious text chiseled into a rock on the northwestern end, and a crude grave marker on the northeastern end of the island. Digging there reveals only a few old bones.

380: This medium-sized island, 103 square miles in area, surrounds an apparently extinct volcano. It is nearly oval in shape, with a cove on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, now deserted, and another small native village. A closer look will reveal a lake in the volcano's crater.

381: This medium-sized island, 89 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a rock outcrop shaped like a monkey on the north end of the

islanda mysterious shrine that appears to have had offerings left within the past few weeks, and a very fine beach. Further examination will reveal nothing else interesting.

382: This medium-sized island, 78 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of a few palm trees along the shore. There is a freshwater stream. The only feature of note is a very fine beach. A shipwrecked castaway is living in a flimsy hut on the northeastern shore. Further examination will reveal a cooking pit containing charred wood and clam shells on the western beach.

383: This large island, 168 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a 65-foot-tall waterfall, and a mysterious shrine that appears to have had offerings left within the past few days. A treasure seeker with a secret map is living in a small hut on the highest point of the island. Exploration will reveal traces of a decades-old shipwreck on the southern shore, and a lake in the volcano's crater.

384: This small island, 16 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, another small native village, a swampy area, and a 52-foot-tall waterfall. Further examination will reveal a bare footprint on the southern beach.

385: This small island, 21 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a cave, and high cliffs. Further examination will reveal a patch of quicksand near a stream to the northwest.

386: This huge island, 416 square miles in area, is mountainous, and has an active volcano. It is almost rectangular in shape, with a sea cave on the southern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include high cliffs, a volcanic crater with a lava lake and fire fountains, a small native village, and high cliffs. A shipwrecked castaway is living in a flimsy hut invisible from the shore on the southern side of the island. A closer look will reveal a bottle enclosing a message washed up on a northeastern beach, and a population of enormous crabs.

387: This large island, 161 square miles in area, is mountainous, and has an active volcano. It is irregular in shape, with a cove on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, another small native village, and a very fine beach. A treasure seeker with a secret map is living in a small house on the eastern shore. Further examination will reveal a human skeleton on the eastern beach, and a human skeleton on the southwestern beach.

388: This huge island, 427 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a cove on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. It has no notable features. A stowaway who was marooned here is living in a lean-to on the highest point of the island. Exploration will reveal a patch of quicksand near a stream to the north, and some random flotsam and jetsam on the southern beach.

389: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a barren islet offshore on the southern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the southern shore.

390: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater

spring. The only feature of note is a very fine beach. A shipwrecked castaway is living in a small hut invisible from the shore on the southern side of the island.

391: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from an enemy is living in a camp on the southeast side of the atoll.

392: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a jutting spit of land on the southern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, a rock outcrop shaped like a skull on the northwest end of the island, and a coral sculpture of a crab at the center of the island.

393: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly circular in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a rock outcrop shaped like a ship on the west end of the island.

394: This medium-sized island, 96 square miles in area, is mountainous, and has two active volcanos. It is roughly rectangular in shape, with a barren islet offshore on the southwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a stone sculpture of a fish on the northwestern shore, a native ritual center, mysterious ancient ruins, a swampy area, and a lava tube cave. Exploration will reveal a substantial amount of driftwood on the western beach. There are signs that pirates have visited this island, but there are none here now.

395: This small island, 18 square miles in area, surrounds an active volcano (50% chance of eruption). It is generally oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A prospector is living in a lean-to invisible from the shore on the southern side of the island. Further examination will reveal some random flotsam and jetsam on the northern beach.

396: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost oval in shape, with a cove on the southern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include strange ancient ruins, and a rock outcrop shaped like a monkey on the west end of the island.

397: This small island, 11 square miles in area, surrounds an active volcano (50% chance of eruption). It is long and narrow in shape, with a barren islet offshore on the western side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. Further examination will reveal a crude grave marker on the southern end of the island. Digging there reveals only a few old bones.

398: This medium-sized island, 80 square miles in area, surrounds an active volcano (20% chance of eruption). It is nearly oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A prospector is living in a small hut on the northern shore. Further examination will reveal a bottle enclosing a message washed up on a northwestern beach.

399: This huge island, 361 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape, with a cove on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and three ponds. Notable features include a rock outcrop shaped like a skull on the northeast end of the island, and a cave. A closer look will reveal some random flotsam and jetsam on the southeastern beach, and a lake in the volcano's crater. There is a large pirate base, with 90 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

400: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a sea cave on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a very fine beach. A treasure seeker with a secret map is living in a camp near the highest point of the island.

401: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to great emotional trauma and thinks he came here seeking religious enlightenment, but is really a shipwrecked castaway, is living in a flimsy hut invisible from the shore on the southeastern side of the island.

402: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the northeast side of the atoll. Further examination will reveal some random flotsam and jetsam on the southwestern beach.

403: This small island, 14 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a cove on the western side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the western shore. Further examination will reveal some random flotsam and jetsam on the northeastern beach.

404: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include strange ancient ruins, and . A shipwrecked castaway is living in a grass hut on the east side of the atoll.

405: This huge island, 392 square miles in area, is mountainous, and has an active volcano. It is roughly oval in shape, with a sheltered lagoon on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a valley of living prehistoric creatures, a small native village, another small native village, and a 115-foot-tall waterfall. A madman who lost his reason due to eating some strange berries he found on the island and thinks he came here seeking religious enlightenment, but is really a shipwrecked castaway, is living in a lean-to on the northwestern shore. Further examination will reveal marks of a recent canoe landing on the northwestern beach, and a crate containing a supply of ship's biscuit, full of weevils, washed up on the northern beach.

406: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few months. Exploration will reveal a bare footprint on the southwestern beach.

407: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A shipwrecked castaway is living in a grass hut on the east side of the atoll.

408: This small island, 15 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a cove on the northeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, a small native village, and mysterious ancient ruins. A closer look will reveal a human skeleton on the northern beach.

409: This small island, 9 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape,

with a cove on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a lean-to near the highest point of the island. Further examination will reveal traces of a decades-old shipwreck on the southeastern shore.

410: This large island, 152 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. The only feature of note is a very fine beach. A shipwrecked castaway is living in a grass hut on the western shore. Further examination will reveal a patch of quicksand near a stream to the west, and a seabird rookery on some offshore rocks to the northwest.

411: This huge island, 367 square miles in area, is mountainous, and has two active volcanos. It is roughly rectangular in shape, with a cove on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, a giant panther which is worshipped by the local inhabitants, a lava tube cave, another native village, and a 88-foot-tall waterfall (with a cave behind it). A closer look will reveal hot spring on the west side of the volcano, and the remains of an old camp on the west side of the island.

412: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a very fine beach, anomalous ancient ruins, and a wooden sculpture of a chief facing east at the center of the island. A recluse who is studying the biology of the island is living in a grass hut on the highest point of the island.

413: This small island, 16 square miles in area, surrounds an active volcano (5% chance of eruption). It is almost oval in shape, with a cove on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a cave, a small native village, now deserted, and a rock outcrop shaped like a skull on the southwest end of the island. A recluse who has fled from creditors is living in a tent on the northwestern shore. Exploration will reveal a cooking pit containing charred wood and clam shells on the western beach.

414: This medium-sized island, 96 square miles in area, is mountainous, and has two active volcanos. It is long and narrow in shape, with a cove on the southern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a rock outcrop shaped like a ship on the north end of the island a native village, high cliffs, a giant panther which is feared by the local inhabitants, and mysterious ancient ruins. Exploration will reveal traces of a decades-old shipwreck on the northwestern shore.

415: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few weeks. A recluse who is hiding from the law is living in a flimsy hut on the northwest side of the atoll.

416: This small island, 11 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. An escaped slave from a nearby country is living in a crude hut invisible from the shore on the southwestern side of the island. Exploration will reveal a bare footprint on the northern beach.

417: This medium-sized island, 76 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of a few palm trees along the shore. There is a freshwater stream. Notable features include weird ancient ruins, and a small native village. A recluse who is hiding from an enemy is living in a camp on the highest point of the island. A closer look will reveal mysterious text chisled into a rock on the southwestern end.

418: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost rectangular in shape, with a cove on the northeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few months. A recluse who is hiding from the law is living in a camp on the highest point of the island.

419: This small island, 13 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a 53-foot-tall waterfall. A shipwrecked castaway is living in a small hut on the highest point of the island. Further examination will reveal traces of a decades-old shipwreck on the southeastern shore.

420: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a cove on the southeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the southwestern shore.

421: This small island, 15 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost rectangular in shape, with a cove on the southwestern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a small native village, and mysterious ancient ruins. A shipwrecked castaway is living in a small hut invisible from the shore on the southern side of the island. Exploration will reveal traces of a decades-old shipwreck on the western shore.

422: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

423: This small island, 12 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a small native village. Further examination will reveal nothing else interesting.

424: This huge island, 355 square miles in area, is mountainous, and has four active volcanos. It is nearly rectangular in shape, with a cove on the northern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a lava tube cave, a rock outcrop shaped like a skull on the southeast end of the island, and high cliffs. A closer look will reveal marks of a recent canoe landing on the southwestern beach, and a seabird rookery on some offshore rocks to the north. There is a large pirate base, with 87 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

425: This medium-sized island, 101 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a cove on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is weird ancient ruins. A shipwrecked castaway is living in a small hut invisible from the shore on the northeastern side of the island. A closer look will reveal marks of a recent canoe landing on the southwestern beach.

426: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is .

427: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a cove on the western side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a wooden sculpture of a whale on the southern shore, a rock outcrop shaped like a skull on the southeast end of the island, and anomalous ancient ruins. A treasure seeker with a secret map is living in a tent invisible from the shore on the western side of the island.

428: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a cove on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and a wooden sculpture of a fishlike humanoid facing east at the center of the island. A treasure seeker with a secret map is living in a tent on the northeastern shore.

429: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and strange ancient ruins. A shipwrecked castaway is living in a flimsy hut on the northeast side of the atoll.

430: This large island, 157 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a cove on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a camp invisible from the shore on the southwestern side of the island. A closer look will reveal some random flotsam and jetsam on the northern beach, and hot spring on the north side of the volcano.

431: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features.

432: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a sea cave on the northern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, a coral sculpture of a whale on the southern shore, and strange ancient ruins. A mad scientist is living in a grass hut on the highest point of the island.

433: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the southwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features.

434: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is strange ancient ruins. A shipwrecked castaway is living in a small hut near the highest point of the island.

435: This large island, 173 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a sheltered lagoon on the western side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include disturbing ancient ruins, and a mysterious shrine that appears to have had offerings left within the past few weeks. A shipwrecked castaway is living in a flimsy hut on the northern shore. Further examination will reveal mysterious text chiseled into a rock on the western end, and some random flotsam and jetsam on the northeastern beach.

436: This small island, 16 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a cove on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A mad scientist is living in a small hut invisible from the shore on the northeastern side of the island. Further examination will reveal a substantial amount of driftwood on the northwestern beach.

437: This medium-sized island, 89 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a cove on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a lean-to near the highest point of the island. A closer look will reveal nothing else interesting.

438: This huge island, 340 square miles in area, is mountainous, and has five active volcanos. It is roughly rectangular in shape, with a jutting spit of land on the western side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a cave, a small native village, a volcanic crater with a lava lake and fire fountains, another small native village, now deserted, and a giant ape which is feared by the local inhabitants. A recluse who is hiding from the law is living in a camp invisible from the shore on the northeastern side of the island. A closer look will reveal a patch of quicksand near a stream to the north, and a substantial amount of driftwood on the southeastern beach.

439: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the west side of the atoll.

440: This medium-sized island, 80 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a sheltered lagoon on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a very fine beach, a small native village, and mysterious ancient ruins. A prisoner of pirates who was marooned here is living in a lean-to on the western shore. Further examination will reveal mysterious text chisled into a rock on the eastern end.

441: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from an enemy is living in a flimsy hut on the northwest side of the atoll.

442: This large island, 159 square miles in area, surrounds an active volcano (35% chance of eruption). It is almost rectangular in shape, with a cove on the northern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a camp on the southeastern shore. Exploration will reveal traces of a decades-old shipwreck on the southern shore, and mysterious text chisled into a rock on the eastern end.

443: This medium-sized island, 90 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a rock outcrop shaped like a skull on the west end of the island. A closer look will reveal nothing else interesting.

444: This medium-sized island, 86 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a barren islet offshore on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a flimsy hut invisible from the shore on the southwestern side of the island. A closer look will reveal mysterious text chisled into a rock on the northwestern end.

445: This huge island, 345 square miles in area, surrounds an apparently extinct volcano. It is almost circular in shape, with a jutting spit of land on the southern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. It has no notable features. A treasure seeker with a secret map is living in a tent invisible from the shore on the northeastern side of the island. A closer look will reveal mysterious text chisled into a rock on the northern end, and hot spring on the west side of the volcano.

446: This large island, 165 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a sea cave on the southeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a very fine beach, a rock outcrop shaped like a monkey on the northeast end of the island, and a mysterious shrine that appears to have had offerings left within the past few days. Further examination will reveal the remains of an old camp on the north side of the island, and a crude grave marker on the southeastern end of the island. Digging there reveals only a few old bones.

447: This small island, 25 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and weird ancient ruins. A closer look will reveal a substantial amount of driftwood on the eastern beach.

448: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a freshwater stream. The only feature of note is a coral sculpture of a fish at the center of the island. A madman who lost his reason due to eating some strange berries he found on the island and thinks he is preparing to conquer the world, but is really the last survivor of an expedition to the island, is living in a camp near the highest point of the island.

449: This small island, 16 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a rock outcrop shaped like a skull on the northeast end of the island. A closer look will reveal nothing else interesting.

450: This small island, 14 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who has fled from creditors is living in a lean-to invisible from the shore on the western side of the island. Exploration will reveal nothing else interesting.

451: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and a wooden sculpture of a fish on the northeastern shore. A mutinous sailor who was marooned here is living in a rough hut on the north side of the atoll.

452: This small island, 16 square miles in area, surrounds an active volcano (40% chance of eruption). It is roughly oval in shape, with a jutting spit of land on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A closer look will reveal nothing else interesting.

453: This huge island, 338 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a rock outcrop shaped like a monkey on the west end of the island, a small native village, another small native village, and a stone sculpture of a whale at the highest point of the island. Further examination will reveal a bottle enclosing a message washed up on an eastern beach, and a population of oddly rectangular crabs.

454: This large island, 160 square miles in area, surrounds an active volcano (45% chance of eruption). It is long and narrow in shape, with a sea cave on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, and another small native village. Further examination will reveal some random flotsam and jetsam on the southwestern beach, and mysterious text chiseled into a rock on the southwestern end.

455: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a cove on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who has fled from creditors is living in a tent on the highest point of the island.

456: This small island, 15 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a cove on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A mad scientist is living in a small hut invisible from the shore on the southwestern side of the island. Exploration will reveal a cooking pit containing charred wood and clam shells on the northwestern beach.

457: This large island, 168 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a cove on the northeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and a very fine beach. A mad scientist is living in a flimsy hut near the highest point of the island. A closer look will reveal the remains of an old camp on the northeast side of the island, and a substantial amount of driftwood on the southern beach.

458: This huge island, 410 square miles in area, is mountainous, and has three active volcanos. It is generally oval in shape, with a cove on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include strange ancient ruins, a mysterious shrine that appears to have had offerings left within the past few months, and a 124-foot-tall waterfall (with a cave behind it). A closer look will reveal a bare footprint on the southern beach, and marks of a recent canoe landing on the western beach. There is a large pirate base, with 65 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

459: This large island, 162 square miles in area, surrounds an apparently extinct volcano. It is approximately oval in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, high cliffs, and a cave. Further examination will reveal a cooking pit containing charred wood and clam shells on the western beach, and a crude grave marker on the northeastern end of the island. Digging there reveals only a few old bones. There is a pirate outpost here, occupied by 16 pirates.

460: This large island, 163 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a sheltered lagoon on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, a cave, a small native village, and another small native village. Exploration will reveal a human skeleton on the western beach, and traces of a decades-old shipwreck on the southeastern shore.

461: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a wooden sculpture of a chief facing north at the center of the island, a mysterious shrine that appears to have had offerings left within the past few weeks, and a rock outcrop shaped like a skull on the west end of the island.

462: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a stone sculpture of a squid facing toward the sea on the eastern shore, and .

463: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

464: This medium-sized island, 85 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, and a small native village. Exploration will reveal nothing else interesting.

465: This large island, 162 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a sea cave on the western side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A mad scientist is living in a flimsy hut on the southeastern shore. Exploration will reveal a crate containing various books, ruined by salt water, washed up on the northwestern beach, and a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones.

466: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly circular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A mad scientist is living in a crude hut near the highest point of the island.

467: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a cove on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, a very fine beach, and a rock outcrop shaped like a skull on the southeast end of the island. A shipwrecked castaway is living in a grass hut on the northwestern shore.

468: This huge island, 393 square miles in area, surrounds an active volcano (40% chance of eruption). It is long and narrow in shape, with a cove on the eastern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a coral sculpture of a fish at the center of the island, a rock outcrop shaped like a skull on the north end of the island, a small native village, and high cliffs. Further examination will reveal a human skeleton on the northern beach, and traces of a decades-old shipwreck on the southern shore.

469: This huge island, 427 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape, with a cove on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and a pond. Notable features include a small native village, a coral sculpture of a canoe at the center of the island, high cliffs, and a 36-foot-tall waterfall. An escaped slave from a nearby country is living in a small hut on the northeastern shore. A closer look will reveal a population of oddly rectangular crabs, and the remains of an old camp on the southwest side of the island.

470: This small island, 8 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a jutting spit of land on the southern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a small native village, now deserted, a stone sculpture of a recognizable local legendary figure facing inland on the eastern shore, and a rock outcrop shaped like a man's head on the southwest end of the island. Exploration will reveal nothing else interesting.

471: This medium-sized island, 99 square miles in area, surrounds an active volcano (35% chance of eruption). It is long and narrow in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include high cliffs, a 59-foot-tall waterfall, and a small native village. Exploration will reveal nothing else interesting.

472: This huge island, 403 square miles in area, surrounds an active volcano (10% chance of eruption). It is roughly oval in shape, with a cove on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and a pond. Notable features include a small native village, another small native village, and a 45-foot-tall waterfall. An escaped slave from a nearby country is living in a small hut on the highest point of the island. A closer look will reveal the remains of an old camp on the northwest side of the island, and some random flotsam and jetsam on the southwestern beach.

473: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a barren islet offshore on the western side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a coral sculpture of a chief facing inland on the northeastern

shore. A treasure seeker with a secret map is living in a rough hut invisible from the shore on the southwestern side of the island.

474: This small island, 11 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A treasure seeker with a secret map is living in a tent near the highest point of the island. Exploration will reveal a population of oddly rectangular crabs.

475: This small island, 17 square miles in area, surrounds an apparently extinct volcano. It is almost rectangular in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include high cliffs, a lava tube cave, weird ancient ruins, and a 75-foot-tall waterfall. A mad scientist is living in a small hut on the southwestern shore. A closer look will reveal a bare footprint on the northern beach.

476: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost oval in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A treasure seeker with a secret map is living in a grass hut on the highest point of the island.

477: This huge island, 338 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sheltered lagoon on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and three ponds. It has no notable features. A madman who lost his reason due to a head injury and thinks he is a stowaway who was marooned here, but is really a shipwrecked castaway, is living in a small hut invisible from the shore on the northern side of the island. A closer look will reveal a bare footprint on the southwestern beach, and a population of exceptionally large crabs.

478: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost circular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a rock outcrop shaped like a monkey on the north end of the island, disturbing ancient ruins, and a coral sculpture of an octopus facing inland on the southern shore.

479: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few weeks. A shipwrecked castaway is living in a flimsy hut on the southwest side of the atoll.

480: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a sea cave on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and mysterious ancient ruins.

481: This large island, 174 square miles in area, surrounds an active volcano (5% chance of eruption). It is irregular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A mad scientist is living in a small hut on the highest point of the island. A closer look will reveal traces of a decades-old shipwreck on the northeastern shore, and hot spring on the west side of the volcano.

482: This huge island, 428 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a small native village, another small native village, and strange ancient ruins. Further examination will reveal a population of brightly-colored crabs, and a crate containing navigational instruments, washed up on the northern beach.

483: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost rectangular in shape, with a barren islet offshore on the northern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features.

484: This large island, 167 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A mad scientist is living in a grass hut on the western shore. Further examination will reveal a population of exceptionally large crabs, and traces of a decades-old shipwreck on the western shore.

485: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is .

486: This huge island, 355 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a cove on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. It has no notable features. Further examination will reveal some random flotsam and jetsam on the northwestern beach, and a substantial amount of driftwood on the northern beach. There is a small pirate base, with 24 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

487: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A prisoner of pirates who was marooned here is living in a flimsy hut on the southeast side of the atoll.

488: This huge island, 355 square miles in area, is mountainous, and has an active volcano. It is nearly circular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include high cliffs, a rock outcrop shaped like a monkey on the northeast end of the island, a native village, and another native village. An exiled noble from a nearby country is living in a small hut invisible from the shore on the northeastern side of the island. A closer look will reveal a crate containing preserved food, apparently spoiled, washed up on the northeastern beach, and a cooking pit containing charred wood and clam shells on the southeastern beach.

489: This large island, 178 square miles in area, surrounds an active volcano (30% chance of eruption). It is generally rectangular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a lava tube cave, a 39-foot-tall waterfall, high cliffs, and a cave. Exploration will reveal a seabird rookery on some offshore rocks to the southeast, and a bare footprint on the southwestern beach. There is a pirate outpost here, occupied by 4 pirates. A pirate ship is anchored offshore, temporarily adding its crew to the population.

490: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

491: This large island, 178 square miles in area, surrounds an active volcano (45% chance of eruption). It is roughly oval in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a small native village, now deserted. A madman who lost his reason due to the effects of a tropical disease and thinks he is hiding from an enemy, but is really the last survivor of an expedition to the island, is living in a tent on the northeastern shore. Further examination will reveal mysterious text chiseled into a rock on the northwestern end, and a population of exceptionally large crabs.

492: This large island, 152 square miles in area, is mountainous, and has three active volcanos. It is nearly rectangular in shape, with a barren islet offshore on the western side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a valley of living prehistoric creatures, a small native village, another native village, now deserted, another small native village, and a very fine beach. A closer look will reveal a substantial amount of driftwood on the southeastern beach, and a substantial amount of driftwood on the eastern beach.

493: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and mysterious ancient ruins.

494: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the north side of the atoll. Further examination will reveal nothing else interesting.

495: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly circular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the southeast end of the island, and anomalous ancient ruins.

496: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is .

497: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a wooden sculpture of a chief facing south at the center of the island, and .

498: This medium-sized island, 81 square miles in area, surrounds an active volcano (40% chance of eruption). It is generally circular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include high cliffs, and a small native village. A mutinous sailor who was marooned here is living in a lean-to invisible from the shore on the western side of the island. A closer look will reveal some random flotsam and jetsam on the northeastern beach.

499: This medium-sized island, 96 square miles in area, surrounds an active volcano (35% chance of eruption). It is long and narrow in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, a 53-foot-tall waterfall, and a rock outcrop shaped like a skull on the north end of the island. Further examination will reveal nothing else interesting. There is a small pirate base, with 30 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

500: This small island, 13 square miles in area, surrounds an active volcano (15% chance of eruption). It is almost circular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a 52-foot-tall waterfall (with a cave behind it), and a very fine beach. A shipwrecked castaway is living in a lean-to near the highest point of the island. Further examination will reveal nothing else interesting.

501: This medium-sized island, 105 square miles in area, surrounds an active volcano (25% chance of eruption). It is generally oval in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a swampy area. A shipwrecked castaway is living in a lean-to invisible from the shore on the northeastern side of the island. Further examination will reveal some random flotsam and jetsam on the northwestern beach.

502: This medium-sized island, 92 square miles in area, is mountainous, and has three active volcanos. It is almost circular in shape, with a sea cave on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a swampy area, a volcanic crater with a lava lake and fire fountains, and a wooden sculpture of a chief facing inland on the northwestern shore. A shipwrecked family is living in a tent near the highest point of the island. Exploration will reveal nothing else interesting.

503: This medium-sized island, 108 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a freshwater stream. It has no notable features. A stowaway who was marooned here is living in a small hut on the eastern shore. A closer look will reveal nothing else interesting.

504: This small island, 15 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost rectangular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a small native village, and a wooden sculpture of a whale on the southern shore. A treasure seeker with a secret map is living in a small hut on the northern shore. A closer look will reveal a crude grave marker on the southeastern end of the island. Digging there reveals only a few old bones.

505: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly rectangular in shape, with a sea cave on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A treasure seeker with a secret map is living in a camp near the highest point of the island.

506: This medium-sized island, 85 square miles in area, is mountainous, and has an active volcano. It is nearly circular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a lava tube cave, strange ancient ruins, and a swampy area. A treasure seeker with a secret map is living in the cave. Further examination will reveal a cooking pit containing charred wood and clam shells on the eastern beach.

507: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the west side of the atoll. Further examination will reveal nothing else interesting.

508: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a grass hut near the highest point of the island.

509: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a very fine beach.

510: This huge island, 414 square miles in area, is mountainous, and has two active volcanos. It is almost circular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and a pond. Notable features include a cave, a volcanic crater with a lava lake and fire fountains, a very fine beach, and disturbing ancient ruins. A shipwrecked castaway is living in a grass hut invisible from the shore on the northeastern side of the island. Exploration will reveal a seabird rookery on some offshore rocks to the northwest, and mysterious text chisled into a rock on the western end.

511: This huge island, 359 square miles in area, is mountainous, and has five active volcanos. It is approximately

rectangular in shape, with a cove on the western side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a volcanic crater with a lava lake and fire fountains, a native village, a mysterious shrine that appears to have had offerings left within the past few weeks, a very fine beach, and another small native village. A closer look will reveal a population of exceptionally large crabs, and marks of a recent canoe landing on the western beach.

512: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and a coral sculpture of a chief facing east at the center of the island.

513: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately circular in shape, with a cove on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a coral sculpture of a chief facing north at the highest point of the island, a rock outcrop shaped like a man's head on the north end of the island, and weird ancient ruins.

514: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to drink and thinks he is a stowaway who was marooned here, but is really a shipwrecked castaway, is living in a grass hut on the northwest side of the atoll.

515: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a sea cave on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a very fine beach. A recluse who has fled from creditors is living in a flimsy hut invisible from the shore on the southeastern side of the island.

516: This large island, 165 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A madman who lost his reason due to drink and thinks he is preparing to conquer the world, but is really a mutinous sailor who was marooned here, is living in a lean-to on the eastern shore. A closer look will reveal a substantial amount of driftwood on the northeastern beach, and traces of a decades-old shipwreck on the southwestern shore.

517: This large island, 163 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a very fine beach. A madman who lost his reason due to a head injury and thinks he a scientist who was studying the archaeology of the island, but is really the last survivor of an expedition to the island, is living in a small hut near the highest point of the island. A closer look will reveal some random flotsam and jetsam on the western beach, and a population of oddly rectangular crabs.

518: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

519: This large island, 158 square miles in area, is mountainous, and has four active volcanos. It is long and narrow in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a cave, a small native village, a very fine beach, a mysterious shrine that appears to have had offerings left within the past few months, and another small native village, now deserted. A mutinous sailor who was marooned here is living in a grass hut invisible from the shore on the western side of the island. Further examination will reveal a bottle enclosing a message washed up on a northern beach, and a crate containing 210 silver coins, washed up on the eastern beach.

520: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly circular in shape, with a cove on the northern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, a very fine beach, and a wooden sculpture of a fish at the center of the island. A mad scientist is living in a grass hut on the western shore.

521: This medium-sized island, 88 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly rectangular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A closer look will reveal some random flotsam and jetsam on the southern beach.

522: This small island, 7 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a cove on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few months. An escaped slave from a nearby country is living in a crude hut on the eastern shore. Exploration will reveal a hot spring on the northeast side of the volcano.

523: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

524: This huge island, 367 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a cave, strange ancient ruins, and a very fine beach. A closer look will reveal marks of a recent canoe landing on the southern beach, and a crude grave marker on the northern end of the island. Digging there reveals only a few old bones.

525: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and a coral sculpture of a chief facing toward the sea on the western shore. A shipwrecked castaway is living in a grass hut on the east side of the atoll.

526: This large island, 167 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a cove on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, high cliffs, and a small native village. A treasure seeker with a secret map is living in a lean-to invisible from the shore on the western side of the island. Further examination will reveal mysterious text chiseled into a rock on the northern end, and some random flotsam and jetsam on the northern beach.

527: This medium-sized island, 85 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a sea cave on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a freshwater stream. Notable features include a cave, a small native village, and weird ancient ruins. An escaped slave from a nearby country is living in a small hut invisible from the shore on the southwestern side of the island. A closer look will reveal a lake in the volcano's crater.

528: This large island, 174 square miles in area, is mountainous, and has two active volcanos. It is approximately oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a lava tube cave, a coral sculpture of a local legendary figure facing east at the center of the island, a rock outcrop shaped like a man's head on the north end of the island, a small native village, and another small native village. A mutinous sailor who was marooned here is living in the cave. A closer look will reveal some random flotsam and jetsam on the southern beach, and some random flotsam and jetsam on the northwestern beach.

529: This large island, 161 square miles in area, is mountainous, including four apparently extinct volcanos. It is almost rectangular in shape, with a cove on the eastern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and a pond. Notable features include a coral sculpture of a chief facing south at the highest point of the island, a small native village, and another small native village. A mutinous sailor who was marooned here is living in a grass hut in the jungle on the eastern side of the island. Further examination will reveal traces of a decades-old shipwreck on the northwestern shore, and a substantial amount of driftwood on the western beach.

530: This huge island, 367 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a sea cave on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and three ponds. The only feature of note is a very fine beach. Further examination will reveal a cooking pit containing charred wood and clam shells on the southern beach, and some random flotsam and jetsam on the northwestern beach. There is a pirate outpost here, occupied by 14 pirates.

531: This large island, 156 square miles in area, is mountainous, and has two active volcanos. It is nearly circular in shape, with a sea cave on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, a volcanic crater with a lava lake and fire fountains, and a swampy area. A closer look will reveal a human skeleton in the southeastern part of the island, and a crate containing nothing but sailor's clothes, washed up on the southern beach.

532: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. Exploration will reveal a seabird rookery on some offshore rocks to the south.

533: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the northwest side of the atoll.

534: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a coral sculpture of a chief facing toward the sea on the southern shore. A shipwrecked castaway is living in a flimsy hut on the northwest side of the atoll.

535: This huge island, 381 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a lava tube cave, and a swampy area. A closer look will reveal a substantial amount of driftwood on the eastern beach, and a bottle enclosing a message washed up on a northern beach. There is a large pirate base, with 105 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

536: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a chief facing east at the center of the island, and .

537: This small island, 19 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost rectangular in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. It has no notable features. Further examination will reveal nothing else interesting.

538: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present

is rainwater caught in temporary pools. Notable features include a coral sculpture of a chief facing inland on the northern shore, and . A shipwrecked castaway is living in a crude hut on the northeast side of the atoll. A closer look will reveal some random flotsam and jetsam on the eastern beach.

539: This large island, 165 square miles in area, surrounds an active volcano (40% chance of eruption). It is generally rectangular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a coral sculpture of a fishlike humanoid facing inland on the northeastern shore. A closer look will reveal a bare footprint on the northwestern beach, and a seabird rookery on some offshore rocks to the east.

540: This huge island, 428 square miles in area, surrounds an active volcano (25% chance of eruption). It is nearly oval in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and two ponds. It has no notable features. A closer look will reveal mysterious text chisled into a rock on the northwestern end, and hot spring on the southwest side of the volcano. There is a large pirate base, with 95 permanent residents, on this island. Three pirate ships are anchored offshore, temporarily adding their crews to the population.

541: This medium-sized island, 87 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A prospector is living in a grass hut on the southern shore. A closer look will reveal nothing else interesting.

542: This large island, 164 square miles in area, surrounds an active volcano (5% chance of eruption). It is generally rectangular in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is high cliffs. A madman who lost his reason due to a head injury and thinks he is hiding from an enemy, but is really a shipwrecked castaway, is living in a small hut on the southern shore. A closer look will reveal a seabird rookery on some offshore rocks to the southwest, and a bottle enclosing a message washed up on a northwestern beach.

543: This large island, 157 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a barren islet offshore on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a wooden sculpture of a fish at the center of the island, and a small native village. A mad scientist is living in a lean-to near the highest point of the island. Exploration will reveal a substantial amount of driftwood on the eastern beach, and a crate containing various books, ruined by salt water, washed up on the northern beach.

544: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the western side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a very fine beach.

545: This small island, 13 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a tent near the highest point of the island. A closer look will reveal marks of a recent canoe landing on the southern beach.

546: This small island, 13 square miles in area, surrounds an active volcano (20% chance of eruption). It is generally circular in shape, with a sea cave on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a lean-to invisible from the shore on the southwestern side of the island. Exploration will reveal nothing else interesting.

547: This medium-sized island, 101 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A stowaway who was marooned here is living in a rough hut near the highest point of the island. Further examination will reveal nothing

else interesting.

548: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

549: This large island, 173 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a sea cave on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, a rock outcrop shaped like a skull on the southeast end of the island, another small native village, and a stone sculpture of a chief facing east at the highest point of the island. Exploration will reveal a patch of quicksand near a stream to the southeast, and a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones.

550: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a rock outcrop shaped like a man's head on the southwest end of the island, and strange ancient ruins.

551: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a grass hut on the northwest side of the atoll. Exploration will reveal nothing else interesting.

552: This medium-sized island, 84 square miles in area, is mountainous, and has an active volcano. It is generally rectangular in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of a dense jungle. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, strange ancient ruins, and a volcanic crater with a lava lake and fire fountains. Exploration will reveal nothing else interesting.

553: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A prisoner of pirates who was marooned here is living in a grass hut on the southwestern shore.

554: This large island, 158 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a barren islet offshore on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include mysterious ancient ruins, a rock outcrop shaped like a ship on the west end of the island, and a mysterious shrine that appears to have had offerings left within the past few months. Further examination will reveal the remains of an old camp on the northwest side of the island, and some random flotsam and jetsam on the western beach.

555: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include disturbing ancient ruins, and a mysterious shrine that appears to have had offerings left within the past few days. A recluse who is hiding from an enemy is living in a camp on the south side of the atoll.

556: This small island, 25 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A madman who lost his reason due to the effects of a tropical disease and thinks he came here seeking religious enlightenment, but is really the last survivor of an expedition to the island, is living in a camp invisible from the shore on the southern side of the island. A closer look will reveal nothing else interesting.

557: This small island, 7 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape,

with a barren islet offshore on the northern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a lava tube cave. A shipwrecked castaway is living in a lean-to invisible from the shore on the northeastern side of the island. A closer look will reveal a bare footprint on the northwestern beach.

558: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is strange ancient ruins. A shipwrecked castaway is living in a grass hut on the northeast side of the atoll. Exploration will reveal a cooking pit containing charred wood and clam shells on the southwestern beach.

559: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

560: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and anomalous ancient ruins. A shipwrecked castaway is living in a grass hut on the west side of the atoll.

561: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly circular in shape, with a sea cave on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the highest point of the island.

562: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from an enemy is living in a grass hut on the east side of the atoll.

563: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is .

564: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a small hut near the highest point of the island.

565: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the southeast side of the atoll.

566: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who has fled from creditors is living in a tent on the southwest side of the atoll.

567: This medium-sized island, 64 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a freshwater stream. It has no notable features. A mutinous sailor who was marooned here is living in a crude hut invisible from the shore on the western side of the island. Further examination will reveal a bottle enclosing a message washed up on a southeastern beach.

568: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a cove on the southeastern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a very fine beach, a wooden sculpture of a crab on the northwestern shore, and mysterious ancient ruins. A mad scientist is living in a small hut invisible from the shore on the eastern side of the island.

569: This medium-sized island, 109 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a small native village, now deserted. A treasure seeker with a secret map is living in a camp invisible from the shore on the eastern side of the island. Further examination will reveal nothing else interesting.

570: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately rectangular in shape, with a jutting spit of land on the southern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a rock outcrop shaped like a skull on the west end of the island, and anomalous ancient ruins.

571: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a cove on the eastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the eastern shore.

572: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a very fine beach.

573: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a wooden sculpture of a chief facing north at the center of the island. A shipwrecked castaway is living in a crude hut on the southeast side of the atoll.

574: This huge island, 377 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include mysterious ancient ruins, and a lava tube cave. A closer look will reveal a human skeleton on the northeastern beach, and a bottle enclosing a message washed up on an eastern beach.

575: This large island, 173 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost oval in shape, with a cove on the southern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. Further examination will reveal a cooking pit containing charred wood and clam shells on the northern beach, and a bottle enclosing a message washed up on a southern beach. There is a large pirate base, with 91 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

576: This large island, 162 square miles in area, is mountainous, and has two active volcanos. It is generally circular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a cave, a volcanic crater with a lava lake and fire fountains, a rock outcrop shaped like a man's head on the northeast end of the island, high cliffs, and high cliffs. A madman who lost his reason due to the effects of a tropical disease and thinks he is preparing to conquer the world, but is really someone who came here seeking religious enlightenment, is living in a lean-to on the southwestern shore. Further examination will reveal a crate containing nothing but sailor's clothes, ruined by salt

water, washed up on the northeastern beach, and hot spring on the southwest side of the volcano.

577: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

578: This large island, 169 square miles in area, is mountainous, and has an active volcano. It is long and narrow in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a small native village, a rock outcrop shaped like a skull on the east end of the island, and a cave. A treasure seeker with a secret map is living in a tent on the highest point of the island. Exploration will reveal mysterious text chisled into a rock on the southern end, and a substantial amount of driftwood on the northern beach.

579: This small island, 13 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the northern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. Further examination will reveal nothing else interesting.

580: This large island, 160 square miles in area, surrounds an apparently extinct volcano. It is approximately oval in shape, with a cove on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a small native village. A stowaway who was marooned here is living in a lean-to invisible from the shore on the southeastern side of the island. Further examination will reveal a crude grave marker on the southern end of the island. Digging there reveals only a few old bones, and a lake in the volcano's crater.

581: This large island, 162 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a barren islet offshore on the eastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a coral sculpture of a chief facing west at the highest point of the island, and a very fine beach. A shipwrecked castaway is living in a crude hut on the highest point of the island. Exploration will reveal a crude grave marker on the eastern end of the island. Digging there reveals only a few old bones, and a cooking pit containing charred wood and clam shells on the southwestern beach.

582: This medium-sized island, 96 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A mutinous sailor who was marooned here is living in a rough hut invisible from the shore on the northern side of the island. Exploration will reveal nothing else interesting.

583: This large island, 169 square miles in area, is mountainous, and has an active volcano. It is nearly oval in shape, with a jutting spit of land on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a native village, a coral sculpture of a whale at the highest point of the island, a 96-foot-tall waterfall, another small native village, and a rock outcrop shaped like a monkey on the southwest end of the island. A closer look will reveal some random flotsam and jetsam on the northern beach, and the remains of an old camp on the east side of the island.

584: This medium-sized island, 80 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a freshwater stream. The only feature of note is high cliffs. A closer look will reveal hot spring on the north side of the volcano. There is a large pirate base, with 87 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

585: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a cove on the western side. Its vegetation consists of a few palm trees along the shore. The

only water that may be present is rainwater caught in temporary pools. It has no notable features. A stowaway who was marooned here is living in a rough hut on the highest point of the island.

586: This small island, 9 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sea cave on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a wooden sculpture of a local legendary figure facing south at the highest point of the island, a very fine beach, a small native village, and another small native village. Exploration will reveal a lake in the volcano's crater.

587: This large island, 168 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a barren islet offshore on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, a rock outcrop shaped like a skull on the southwest end of the island, and a coral sculpture of a chief facing inland on the southern shore. Exploration will reveal a cooking pit containing charred wood and clam shells on the northern beach, and a human skeleton on the southeastern beach.

588: This small island, 21 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost rectangular in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a rock outcrop shaped like a monkey on the west end of the island. A mutinous sailor who was marooned here is living in a crude hut on the highest point of the island. A closer look will reveal nothing else interesting.

589: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. The only feature of note is . A madman who lost his reason due to the effects of a tropical disease and thinks he a scientist who was studying the biology of the island, but is really a shipwrecked castaway, is living in a grass hut on the northeast side of the atoll.

590: This huge island, 369 square miles in area, surrounds an active volcano (15% chance of eruption). It is approximately circular in shape, with a jutting spit of land on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and two ponds. Notable features include a small native village, and a very fine beach. An escaped slave from a nearby country is living in a rough hut on the northeastern shore. Exploration will reveal a crate containing nothing but sailor's clothes, washed up on the northeastern beach, and marks of a recent canoe landing on the northwestern beach.

591: This large island, 164 square miles in area, surrounds an active volcano (45% chance of eruption). It is generally oval in shape, with a sea cave on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a small native village. A prospector is living in a small hut on the eastern shore. Exploration will reveal some random flotsam and jetsam on the southwestern beach, and a human skeleton on the western beach.

592: This large island, 155 square miles in area, surrounds an apparently extinct volcano. It is nearly oval in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a very fine beach. A prospector is living in a lean-to on the highest point of the island. Further examination will reveal some random flotsam and jetsam on the southwestern beach, and hot spring on the east side of the volcano.

593: This medium-sized island, 87 square miles in area, is mountainous, and has an active volcano. It is long and narrow in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a cave, a mysterious shrine that appears to have had offerings left within the past few days, and a small native village. An escaped slave from a nearby country is living in a lean-to on the western shore. A closer look will reveal nothing else interesting.

594: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-

submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a jutting spit of land on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

595: This medium-sized island, 64 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A mutinous sailor who was marooned here is living in a grass hut invisible from the shore on the southeastern side of the island. Exploration will reveal a human skeleton in the southeastern part of the island.

596: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the northeast side of the atoll.

597: This small island, 16 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a jutting spit of land on the northern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A treasure seeker with a secret map is living in a tent near the highest point of the island. Further examination will reveal nothing else interesting.

598: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and .

599: This large island, 170 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a cove on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a rock outcrop shaped like a man's head on the west end of the island. A shipwrecked castaway is living in a rough hut on the northwestern shore. Further examination will reveal a crate containing navigational instruments, washed up on the southwestern beach, and a patch of quicksand near a stream to the northeast.

600: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and . A shipwrecked castaway is living in a grass hut on the east side of the atoll. Further examination will reveal nothing else interesting.

601: This medium-sized island, 102 square miles in area, is mountainous, and has three active volcanos. It is generally oval in shape, with a jutting spit of land on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, a small native village, mysterious ancient ruins, another small native village, and high cliffs. A shipwrecked family is living in a tent invisible from the shore on the eastern side of the island. A closer look will reveal the remains of an old camp on the southeast side of the island.

602: This small island, 17 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a 54-foot-tall waterfall, a wooden sculpture of an unrecognizable being facing toward the sea on the eastern shore, a small native village, and another small native village, now deserted. A stowaway who was marooned here is living in a small hut near the highest point of the island. Further examination will reveal a cooking pit containing charred wood and clam shells on the northwestern beach.

603: This large island, 150 square miles in area, is made up of jutting rocks, which are the mostly-submerged

remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include anomalous ancient ruins, a very fine beach, and a wooden sculpture of a fish at the center of the island. Exploration will reveal mysterious text chisled into a rock on the southwestern end, and a substantial amount of driftwood on the southern beach. There is a small pirate base, with 33 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

604: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to a drug administered to him by someone else and thinks he is a prisoner of pirates who was marooned here, but is really a prisoner of pirates who was marooned here, is living in a flimsy hut on the southern shore.

605: This huge island, 387 square miles in area, is mountainous, and has five active volcanos. It is almost oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a very fine beach, a giant panther, and a mysterious shrine that appears to have had offerings left within the past few weeks. A shipwrecked castaway is living in a crude hut near the highest point of the island. Exploration will reveal hot spring on the northeast side of the volcano, and a seabird rookery on some offshore rocks to the northwest.

606: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and a very fine beach.

607: This large island, 156 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape, with a sea cave on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A madman who lost his reason due to a drug administered to him by someone else and thinks he is a prisoner of pirates who was marooned here, but is really the last survivor of an expedition to the island, is living in a crude hut on the northwestern shore. Further examination will reveal hot spring on the south side of the volcano, and a crate containing a supply of ship's biscuit, full of weevils and waterlogged, washed up on the western beach.

608: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and . A shipwrecked castaway is living in a crude hut on the west side of the atoll. Exploration will reveal a human skeleton on the northern beach.

609: This large island, 159 square miles in area, surrounds an apparently extinct volcano. It is nearly circular in shape, with a cove on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a small native village. A prisoner of pirates who was marooned here is living in a flimsy hut on the southeastern shore. A closer look will reveal a crude grave marker on the northeastern end of the island. Digging there reveals only a few old bones, and a cooking pit containing charred wood and clam shells on the northern beach.

610: This huge island, 329 square miles in area, surrounds an active volcano (25% chance of eruption). It is irregular in shape, with a sea cave on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, a cave, a lava tube cave, and high cliffs. Further examination will reveal a crude grave marker on the northwestern end of the island. Digging there reveals only a few old bones, and a crate containing preserved food, apparently spoiled, washed up on the southern beach.

611: This medium-sized island, 81 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately circular in shape, with a barren islet offshore on the southern side. Its vegetation consists of a few

palm trees along the shore. There is a small freshwater spring. The only feature of note is a stone sculpture of an unrecognizable being facing north at the highest point of the island. A madman who lost his reason due to drink and thinks he is preparing to conquer the world, but is really the last survivor of an expedition to the island, is living in a tent invisible from the shore on the southeastern side of the island. Exploration will reveal traces of a decades-old shipwreck on the southwestern shore.

612: This huge island, 417 square miles in area, surrounds an active volcano (45% chance of eruption). It is irregular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a cave, a small native village, now deserted, a mysterious shrine that appears to have had offerings left within the past few months, and mysterious ancient ruins. A closer look will reveal traces of a decades-old shipwreck on the southwestern shore, and a seabird rookery on some offshore rocks to the northeast.

613: This large island, 171 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a sea cave on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A recluse who has fled from creditors is living in a lean-to on the highest point of the island. Exploration will reveal hot spring on the northeast side of the volcano, and a population of oddly rectangular crabs.

614: This medium-sized island, 64 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately circular in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a freshwater stream. Notable features include a small native village, and a very fine beach. A treasure seeker with a secret map is living in a lean-to near the highest point of the island. Exploration will reveal mysterious text chisled into a rock on the southern end.

615: This large island, 161 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the northwestern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include a rock outcrop shaped like a monkey on the east end of the island, a very fine beach, and a small native village. A shipwrecked castaway is living in a flimsy hut near the highest point of the island. Further examination will reveal traces of a decades-old shipwreck on the western shore, and a bottle enclosing a message washed up on a southeastern beach.

616: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include disturbing ancient ruins, and a stone sculpture of a chief facing south at the center of the island. A shipwrecked castaway is living in a crude hut on the southwest side of the atoll.

617: This medium-sized island, 75 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. The only feature of note is a swampy area. A closer look will reveal nothing else interesting.

618: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. The only feature of note is a very fine beach. Exploration will reveal some random flotsam and jetsam on the eastern beach.

619: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost circular in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is weird ancient ruins. A shipwrecked castaway is living in a grass hut on the western shore.

620: This large island, 166 square miles in area, surrounds an active volcano (15% chance of eruption). It is roughly circular in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a cave, a lava tube cave, a small native village, now

deserted, and a rock outcrop shaped like a monkey on the southeast end of the island. Further examination will reveal a cooking pit containing charred wood and clam shells on the southeastern beach, and a bottle enclosing a message washed up on a southeastern beach.

621: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to drink and thinks he is preparing to conquer the world, but is really a shipwrecked castaway, is living in a crude hut on the north side of the atoll. Further examination will reveal the remains of an old camp on the southwest side of the island.

622: This large island, 168 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly rectangular in shape, with a cove on the southern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include a small native village, and a mysterious shrine that appears to have had offerings left within the past few days. A prisoner of pirates who was marooned here is living in a crude hut near the highest point of the island. Exploration will reveal a bare footprint on the southern beach, and some random flotsam and jetsam on the southeastern beach.

623: This huge island, 362 square miles in area, surrounds an active volcano (10% chance of eruption). It is generally rectangular in shape, with a sea cave on the eastern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include mysterious ancient ruins, high cliffs, high cliffs, and a rock outcrop shaped like a ship on the southeast end of the island. A shipwrecked castaway is living in a small hut on the highest point of the island. Further examination will reveal a cooking pit containing charred wood and clam shells on the western beach, and a substantial amount of driftwood on the northwestern beach.

624: This large island, 166 square miles in area, is mountainous, and has four active volcanos. It is roughly oval in shape, with a jutting spit of land on the northern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and a pond. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, a volcanic crater with a lava lake and fire fountains, a lava tube cave, and high cliffs. A closer look will reveal a seabird rookery on some offshore rocks to the north, and a crude grave marker on the southeastern end of the island. Digging there reveals only a few old bones. There is a pirate outpost here, occupied by 6 pirates.

625: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from the law is living in a tent near the highest point of the island.

626: This medium-sized island, 110 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a grass hut invisible from the shore on the southeastern side of the island. A closer look will reveal a cooking pit containing charred wood and clam shells on the western beach.

627: This medium-sized island, 111 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a jutting spit of land on the western side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a flimsy hut invisible from the shore on the northern side of the island. Exploration will reveal a human skeleton in the western part of the island.

628: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on

the southwest side of the atoll. Further examination will reveal a population of enormous crabs.

629: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and a very fine beach.

630: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a barren islet offshore on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, and weird ancient ruins. A mutinous sailor who was marooned here is living in a small hut on the northern shore.

631: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A madman who lost his reason due to the effects of a tropical disease and thinks he is hiding from an enemy, but is really a scientist who was studying the archaeology of the island, is living in a camp on the northwestern shore.

632: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a sheltered lagoon on the western side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few weeks. A mad scientist is living in a crude hut invisible from the shore on the southern side of the island.

633: This medium-sized island, 82 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, and a small native village. Exploration will reveal a crude grave marker on the southern end of the island. Digging there reveals only a few old bones.

634: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly rectangular in shape, with a cove on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a coral sculpture of a chief facing east at the center of the island, a rock outcrop shaped like a skull on the east end of the island, and a mysterious shrine that appears to have had offerings left within the past few months.

635: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from the law is living in a flimsy hut on the south side of the atoll.

636: This medium-sized island, 86 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a cove on the western side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. The only feature of note is a coral sculpture of a fishlike humanoid facing east at the center of the island. Exploration will reveal nothing else interesting.

637: This medium-sized island, 101 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a 68-foot-tall waterfall. An escaped slave from a nearby country is living in a small hut on the highest point of the island. Exploration will reveal a cooking pit containing charred wood and clam shells on the western beach.

638: This large island, 157 square miles in area, is mountainous, and has an active volcano. It is roughly circular in shape, with a cove on the northeastern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a small native village, disturbing ancient ruins, a lava tube cave, a volcanic crater with a lava lake and fire fountains, and a mysterious shrine that appears to have had offerings left within the past few months. A shipwrecked castaway is living in a rough hut invisible from the shore on the southeastern side of the island. Further examination will reveal a patch of quicksand near a stream to the northwest, and a bare footprint on the southwestern beach.

639: This small island, 13 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost circular in shape, with a sea cave on the southwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a grass hut near the highest point of the island. A closer look will reveal nothing else interesting.

640: This medium-sized island, 106 square miles in area, is mountainous, and has an active volcano. It is generally rectangular in shape, with a sea cave on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a rock outcrop shaped like a skull on the southwest end of the island, a mysterious shrine that appears to have had offerings left within the past few months, a small native village, a lava tube cave, and high cliffs. An exiled noble from a nearby country is living in a small hut invisible from the shore on the western side of the island. Further examination will reveal some random flotsam and jetsam on the eastern beach.

641: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the southeast end of the island, and a very fine beach.

642: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

643: This huge island, 375 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sea cave on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, another small native village, and a cave. A shipwrecked castaway is living in a small hut on the highest point of the island. A closer look will reveal a crate containing preserved food, washed up on the northeastern beach, and a substantial amount of driftwood on the southern beach.

644: This medium-sized island, 96 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a cove on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A mutinous sailor who was marooned here is living in a grass hut invisible from the shore on the northwestern side of the island. A closer look will reveal a crude grave marker on the northern end of the island. Digging there reveals only a few old bones.

645: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from an enemy is living in a tent on the northeast side of the atoll. A closer look will reveal a bare footprint on the western beach.

646: This huge island, 352 square miles in area, is mountainous, and has two active volcanos. It is almost oval in shape, with a cove on the southwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include high cliffs, a rock outcrop shaped like a monkey on the northeast end of the island, a mysterious shrine that appears to have had offerings left within the past few weeks, and a volcanic crater with a lava lake and fire fountains. A shipwrecked family is living in a tent on the western shore.

Exploration will reveal a substantial amount of driftwood on the northwestern beach, and a seabird rookery on some offshore rocks to the southeast.

647: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to a head injury and thinks he is a scientist who was studying the geology of the island, but is really a shipwrecked castaway, is living in a crude hut on the northeast side of the atoll.

648: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately oval in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the northeast end of the island, a wooden sculpture of a recognizable local legendary figure facing inland on the northeastern shore, and mysterious ancient ruins.

649: This large island, 173 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a cove on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A recluse who is hiding from an enemy is living in a lean-to on the southeastern shore. A closer look will reveal a crude grave marker on the northwestern end of the island. Digging there reveals only a few old bones, and some random flotsam and jetsam on the western beach.

650: This medium-sized island, 70 square miles in area, is mountainous, and has three active volcanos. It is generally circular in shape, with a cove on the southern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a lava tube cave, a volcanic crater with a lava lake and fire fountains, a mysterious shrine that appears to have had offerings left within the past few days, a very fine beach, and a swampy area. Further examination will reveal a bottle enclosing a message washed up on a northwestern beach. There is a large pirate base, with 79 permanent residents, on this island. Three pirate ships are anchored offshore, temporarily adding their crews to the population.

651: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the north side of the atoll.

652: This medium-sized island, 87 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a cove on the northwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. Exploration will reveal a cooking pit containing charred wood and clam shells on the northern beach.

653: This medium-sized island, 84 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a jutting spit of land on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a freshwater stream. It has no notable features. A madman who lost his reason due to the effects of a tropical disease and thinks he is hiding from an enemy, but is really the last survivor of an expedition to the island, is living in a camp on the highest point of the island. Exploration will reveal nothing else interesting.

654: This huge island, 417 square miles in area, is mountainous, and has four active volcanos. It is long and narrow in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a rock outcrop shaped like a skull on the northwest end of the island, a volcanic crater with a lava lake and fire fountains, a stone sculpture of a whale at the center of the island, and a swampy area. A shipwrecked castaway is living in a lean-to on the eastern shore. Further examination will reveal a crate containing a supply of ship's biscuit, full of weevils and waterlogged, washed up on the southwestern beach, and a human skeleton on the northwestern beach.

655: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A recluse who has fled from creditors is living in a grass hut on the west side of the atoll. A closer look will reveal nothing else interesting.

656: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the southwest side of the atoll.

657: This medium-sized island, 102 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a cove on the southern side. Its vegetation consists of a few palm trees along the shore. There is a freshwater stream. Notable features include a small native village, a rock outcrop shaped like a skull on the west end of the island, and a coral sculpture of a whale at the highest point of the island. A closer look will reveal nothing else interesting.

658: This medium-sized island, 85 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a cove on the northern side. Its vegetation consists of a few palm trees along the shore. There is a freshwater stream. Notable features include a rock outcrop shaped like a skull on the southwest end of the island, and a small native village. A closer look will reveal a crate containing a supply of ship's biscuit, full of weevils and waterlogged, washed up on the southwestern beach.

659: This small island, 17 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, now deserted, and a very fine beach. A mad scientist is living in a lean-to invisible from the shore on the eastern side of the island. Further examination will reveal a substantial amount of driftwood on the southeastern beach.

660: This small island, 24 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the west end of the island, and strange ancient ruins. A treasure seeker with a secret map is living in a tent near the highest point of the island. A closer look will reveal mysterious text chisled into a rock on the southeastern end.

661: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly circular in shape, with a cove on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features.

662: This medium-sized island, 93 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a sea cave on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a freshwater stream. The only feature of note is a small native village. A mad scientist is living in a crude hut invisible from the shore on the northern side of the island. Exploration will reveal a crate containing various books, ruined by salt water, washed up on the northern beach.

663: This large island, 149 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sea cave on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include high cliffs, a 60-foot-tall waterfall, and high cliffs. A closer look will reveal a lake in the volcano's crater, and a population of exceptionally large crabs. There is a small pirate base, with 35 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

664: This huge island, 341 square miles in area, is mountainous, and has three active volcanos. It is roughly

circular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include mysterious ancient ruins, a small native village, a rock outcrop shaped like a ship on the south end of the island, and a swampy area. A prospector is living in a small hut on the highest point of the island. Exploration will reveal a population of exceptionally large crabs, and some random flotsam and jetsam on the southern beach.

665: This huge island, 363 square miles in area, is mountainous, and has five active volcanos. It is nearly rectangular in shape, with a sea cave on the northeastern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and three ponds. Notable features include a 90-foot-tall waterfall, a mysterious shrine that appears to have had offerings left within the past few weeks, and a very fine beach. A shipwrecked family is living in a small house on the western shore. Exploration will reveal a bottle enclosing a message washed up on a southwestern beach, and some random flotsam and jetsam on the northern beach.

666: This huge island, 407 square miles in area, surrounds an apparently extinct volcano. It is nearly rectangular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include mysterious ancient ruins, a mysterious shrine that appears to have had offerings left within the past few days, a small native village, and a cave. A closer look will reveal a population of brightly-colored crabs, and a lake in the volcano's crater.

667: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to a head injury and thinks he is preparing to conquer the world, but is really a shipwrecked castaway, is living in a grass hut on the southeast side of the atoll.

668: This medium-sized island, 89 square miles in area, is mountainous, and has two active volcanos. It is approximately circular in shape, with a jutting spit of land on the southern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include weird ancient ruins, a coral sculpture of a chief facing west at the center of the island, and a native village. A closer look will reveal nothing else interesting.

669: This small island, 11 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately rectangular in shape, with a sea cave on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. Exploration will reveal nothing else interesting.

670: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the southeast side of the atoll.

671: This medium-sized island, 96 square miles in area, surrounds an active volcano (40% chance of eruption). It is irregular in shape, with a barren islet offshore on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, now deserted, another small native village, and disturbing ancient ruins. Further examination will reveal nothing else interesting.

672: This huge island, 366 square miles in area, surrounds an active volcano (35% chance of eruption). It is generally circular in shape, with a cove on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a small hut on the southern shore. Exploration will reveal a patch of quicksand near a stream to the southeast, and a crate containing nothing but sailor's clothes, washed up on the northwestern beach.

673: This medium-sized island, 74 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a cove on

the northwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A treasure seeker with a secret map is living in a tent on the southwestern shore. Exploration will reveal hot spring on the west side of the volcano.

674: This medium-sized island, 91 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a cove on the western side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and a coral sculpture of an octopus facing west at the highest point of the island. A mutinous sailor who was marooned here is living in a rough hut invisible from the shore on the southwestern side of the island. Exploration will reveal nothing else interesting.

675: This huge island, 380 square miles in area, surrounds an active volcano (35% chance of eruption). It is roughly oval in shape, with a cove on the eastern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a coral sculpture of a fish at the center of the island, a small native village, strange ancient ruins, and a very fine beach. Exploration will reveal marks of a recent canoe landing on the northeastern beach, and a cooking pit containing charred wood and clam shells on the southern beach.

676: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and anomalous ancient ruins.

677: This large island, 172 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. An escaped slave from a nearby country is living in a crude hut on the highest point of the island. A closer look will reveal a bare footprint on the southern beach, and a population of brightly-colored crabs.

678: This small island, 9 square miles in area, surrounds an apparently extinct volcano. It is nearly oval in shape, with a barren islet offshore on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include high cliffs, a coral sculpture of a chief facing north at the highest point of the island, a lava tube cave, and high cliffs. Exploration will reveal a cooking pit containing charred wood and clam shells on the eastern beach.

679: This huge island, 381 square miles in area, surrounds an apparently extinct volcano. It is nearly oval in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a cave, and a lava tube cave. Exploration will reveal a population of oddly rectangular crabs, and a bottle enclosing a message washed up on a western beach. There is a pirate town, with 312 permanent residents, on this island. Six pirate ships are at the docks, arriving, or departing, temporarily adding their crews to the population.

680: This large island, 172 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately circular in shape, with a cove on the western side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. The only feature of note is a small native village. A madman who lost his reason due to great emotional trauma and thinks he a scientist who was studying the archaeology of the island, but is really hiding from an enemy, is living in a crude hut on the highest point of the island. Exploration will reveal some random flotsam and jetsam on the southern beach, and a human skeleton in the northwestern part of the island.

681: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A madman who lost his reason due to drink and thinks he is hiding from an enemy, but is really a shipwrecked castaway, is living in a rough hut on the east side of the atoll.

682: This small island, 17 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a 45-foot-tall waterfall, a small native village, and another small native village. Exploration will reveal a seabird rookery on some offshore rocks to the east.

683: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a coral sculpture of a chief facing inland on the western shore.

684: This large island, 164 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a very fine beach. A closer look will reveal a crude grave marker on the southeastern end of the island. Digging there reveals only a few old bones, and a seabird rookery on some offshore rocks to the northeast.

685: This huge island, 355 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a barren islet offshore on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few days. Further examination will reveal a bare footprint on the northeastern beach, and a population of oddly rectangular crabs. There is a large pirate base, with 97 permanent residents, on this island. Three pirate ships are anchored offshore, temporarily adding their crews to the population.

686: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few weeks.

687: This small island, 22 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sea cave on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a small native village, and another small native village. A treasure seeker with a secret map is living in a lean-to on the northeastern shore. Exploration will reveal nothing else interesting.

688: This large island, 160 square miles in area, surrounds an active volcano (35% chance of eruption). It is roughly rectangular in shape, with a cove on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A closer look will reveal a substantial amount of driftwood on the southwestern beach, and a crude grave marker on the northeastern end of the island. Digging there reveals only a few old bones. There is a pirate outpost here, occupied by 9 pirates. A pirate ship is anchored offshore, temporarily adding its crew to the population.

689: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the south side of the atoll. Exploration will reveal a bare footprint on the northwestern beach.

690: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a sea cave on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A mad scientist is living in a lean-to on the southwestern shore.

691: This large island, 174 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a sea cave on the

northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. It has no notable features. A madman who lost his reason due to the effects of a tropical disease and thinks he came here seeking religious enlightenment, but is really hiding from an enemy, is living in a tent near the highest point of the island. A closer look will reveal a seabird rookery on some offshore rocks to the south, and the remains of an old camp on the northwest side of the island.

692: This small island, 15 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the western side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and mysterious ancient ruins. Exploration will reveal some random flotsam and jetsam on the southern beach.

693: This large island, 163 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, strange ancient ruins, and a mysterious shrine that appears to have had offerings left within the past few weeks. A recluse who has fled from creditors is living in a flimsy hut invisible from the shore on the southeastern side of the island. A closer look will reveal traces of a decades-old shipwreck on the eastern shore, and a cooking pit containing charred wood and clam shells on the southern beach.

694: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a coral sculpture of a crab at the center of the island. A shipwrecked castaway is living in a grass hut on the northwest side of the atoll.

695: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the southwest side of the atoll.

696: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A closer look will reveal nothing else interesting.

697: This large island, 158 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a sea cave on the northwestern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a rock outcrop shaped like a ship on the east end of the island, and a small native village. A treasure seeker with a secret map is living in a tent on the highest point of the island. A closer look will reveal the remains of an old camp on the south side of the island, and some random flotsam and jetsam on the western beach.

698: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a wooden sculpture of a chief facing north at the center of the island, and .

699: This huge island, 400 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, strange ancient ruins, a lava tube cave, and a stone sculpture of a chief facing south at the center of the island. Further examination will reveal a substantial amount of driftwood on the northern beach, and marks of a recent canoe landing on the southwestern beach. There is a large pirate base, with 85 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

700: This medium-sized island, 90 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a rock outcrop shaped like a ship on the west end of the island, a swampy area, and a small native village. A closer look will reveal mysterious text chiseled into a rock on the northeastern end.

701: This large island, 155 square miles in area, is mountainous, and has four active volcanoes. It is almost oval in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a volcanic crater with a lava lake and fire fountains, a 109-foot-tall waterfall, and a small native village. A recluse who is hiding from an enemy is living in a small hut invisible from the shore on the southwestern side of the island. Further examination will reveal a bare footprint on the northern beach, and a crude grave marker on the eastern end of the island. Digging there reveals only a few old bones.

702: This large island, 167 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A madman who lost his reason due to a drug administered to him by someone else and thinks he is hiding from an enemy, but is really a shipwrecked castaway, is living in a grass hut near the highest point of the island. Exploration will reveal marks of a recent canoe landing on the northwestern beach, and a bare footprint on the northwestern beach.

703: This small island, 23 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly rectangular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a coral sculpture of a chief facing inland on the northern shore. A mad scientist is living in a flimsy hut on the highest point of the island. A closer look will reveal nothing else interesting.

704: This large island, 162 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A recluse who has fled from creditors is living in a flimsy hut on the highest point of the island. A closer look will reveal traces of a decades-old shipwreck on the southwestern shore, and a cooking pit containing charred wood and clam shells on the southern beach.

705: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a crude hut on the southwest side of the atoll. A closer look will reveal nothing else interesting.

706: This medium-sized island, 72 square miles in area, is mountainous, and has three active volcanoes. It is roughly circular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a native village, a 128-foot-tall waterfall, strange ancient ruins, and another native village, now deserted. Further examination will reveal nothing else interesting.

707: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a sea cave on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A mad scientist is living in a small hut near the highest point of the island.

708: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately rectangular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is mysterious ancient ruins. A shipwrecked castaway is living in a small hut invisible from the shore on the eastern side of the island.

709: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the west side of the atoll. A closer look will reveal nothing else interesting.

710: This huge island, 323 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a sea cave on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and a pond. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and a cave. A treasure seeker with a secret map is living in a small hut on the northeastern shore. A closer look will reveal a seabird rookery on some offshore rocks to the north, and a patch of quicksand near a stream to the southeast.

711: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a sea cave on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the southeastern shore.

712: This medium-sized island, 96 square miles in area, is mountainous, and has an active volcano. It is nearly circular in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a cave, a native village, and a rock outcrop shaped like a monkey on the south end of the island. An escaped slave from a nearby country is living in a small house invisible from the shore on the southern side of the island. Further examination will reveal the remains of an old camp on the north side of the island.

713: This small island, 10 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a jutting spit of land on the southern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a stone sculpture of a chief facing west at the highest point of the island, a mysterious shrine that appears to have had offerings left within the past few days, and a rock outcrop shaped like a skull on the west end of the island. A closer look will reveal a human skeleton in the eastern part of the island.

714: This medium-sized island, 102 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost oval in shape, with a jutting spit of land on the northern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a very fine beach, and a small native village. Exploration will reveal nothing else interesting.

715: This large island, 163 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly circular in shape, with a sea cave on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A prisoner of pirates who was marooned here is living in a grass hut invisible from the shore on the southeastern side of the island. Further examination will reveal marks of a recent canoe landing on the southwestern beach, and traces of a decades-old shipwreck on the southwestern shore.

716: This small island, 16 square miles in area, surrounds an active volcano (45% chance of eruption). It is generally circular in shape, with a cove on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a 45-foot-tall waterfall, a small native village, strange ancient ruins, and another small native village, now deserted. A closer look will reveal nothing else interesting.

717: This medium-sized island, 80 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a cove on the western side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. Exploration will reveal nothing else interesting.

718: This medium-sized island, 100 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a lava tube cave, a small native village, a 53-foot-tall waterfall (with a cave behind it), and a cave. A madman who lost his reason due to drink and thinks he is hiding from an enemy, but is really a stowaway who was marooned here, is living in a small hut invisible from the shore on the southern side of the island. Exploration will reveal nothing else interesting.

719: This medium-sized island, 102 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a rock outcrop shaped like a monkey on the northwest end of the island, a small native village, and a mysterious shrine that appears to have had offerings left within the past few weeks. Further examination will reveal nothing else interesting.

720: This medium-sized island, 64 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a jutting spit of land on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A mad scientist is living in a small hut invisible from the shore on the northwestern side of the island. Exploration will reveal nothing else interesting.

721: This huge island, 370 square miles in area, is mountainous, and has three active volcanos. It is generally oval in shape, with a barren islet offshore on the southern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and three ponds. Notable features include a small native village, high cliffs, a volcanic crater with a lava lake and fire fountains, and a coral sculpture of a chief facing inland on the western shore. A closer look will reveal a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones, and traces of a decades-old shipwreck on the northern shore.

722: This large island, 159 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a sheltered lagoon on the western side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a small native village, a coral sculpture of a crab at the highest point of the island, and a rock outcrop shaped like a ship on the south end of the island. A treasure seeker with a secret map is living in a grass hut invisible from the shore on the southeastern side of the island. Exploration will reveal some random flotsam and jetsam on the northern beach, and some random flotsam and jetsam on the southern beach.

723: This huge island, 344 square miles in area, is mountainous, and has an active volcano. It is generally rectangular in shape, with a jutting spit of land on the southern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a giant snake, a native village, and a cave. A madman who lost his reason due to a head injury and thinks he is hiding from an enemy, but is really the last survivor of an expedition to the island, is living in a small hut near the highest point of the island. A closer look will reveal some random flotsam and jetsam on the southeastern beach, and mysterious text chisled into a rock on the western end.

724: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a sea cave on the northeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A mad scientist is living in a grass hut invisible from the shore on the northern side of the island.

725: This large island, 162 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly rectangular in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a small native village. Exploration will reveal the remains of an old camp on the southeast side of the island, and some random flotsam and jetsam on the southeastern beach.

726: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a stone sculpture of a chief facing east at the highest point of the island, and a mysterious shrine that appears to have had offerings left within the past few days. A shipwrecked castaway is living in a lean-to on the northwestern shore.

727: This medium-sized island, 101 square miles in area, is mountainous, and has an active volcano. It is nearly rectangular in shape, with a cove on the eastern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include high cliffs, a mysterious shrine that appears to have had offerings left within the past few months, a very fine beach, and a small native village. An exiled noble from a nearby country is living in a tent on the highest point of the island. A closer look will reveal a hot spring on the north side of the volcano.

728: This large island, 159 square miles in area, is mountainous, and has an active volcano. It is long and narrow in shape, with a cove on the northwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a native village, high cliffs, and another small native village. A treasure seeker with a secret map is living in a lean-to invisible from the shore on the southeastern side of the island. Exploration will reveal a seabird rookery on some offshore rocks to the east, and a bare footprint on the northeastern beach.

729: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

730: This medium-sized island, 77 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a barren islet offshore on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include strange ancient ruins, a 53-foot-tall waterfall, a mysterious shrine that appears to have had offerings left within the past few months, and a small native village. A closer look will reveal traces of a decades-old shipwreck on the southeastern shore.

731: This huge island, 352 square miles in area, surrounds an apparently extinct volcano. It is approximately oval in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a swampy area. A prospector is living in a crude hut near the highest point of the island. Further examination will reveal a substantial amount of driftwood on the northern beach, and some random flotsam and jetsam on the northern beach.

732: This large island, 170 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include mysterious ancient ruins, a mysterious shrine that appears to have had offerings left within the past few weeks, and a small native village. A closer look will reveal a seabird rookery on some offshore rocks to the south, and the remains of an old camp on the northeast side of the island.

733: This tiny island, 2 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost circular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a coral sculpture of a chief facing south at the highest point of the island. A recluse who is hiding from an enemy is living in a camp near the highest point of the island.

734: This huge island, 403 square miles in area, surrounds an active volcano (40% chance of eruption). It is roughly rectangular in shape, with a sea cave on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and a pond. It has no notable features. A shipwrecked castaway is living in a grass hut invisible from the shore on the northern side of the island. Exploration will reveal some random flotsam and jetsam on the southern beach, and a hot spring on the south side of the volcano.

735: This medium-sized island, 94 square miles in area, is mountainous, including three apparently extinct

volcanos. It is roughly circular in shape, with a cove on the southeastern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and two ponds. Notable features include a native village, a mysterious shrine that appears to have had offerings left within the past few days, a lava tube cave, and another small native village. A stowaway who was marooned here is living in a small hut in the jungle on the southwestern side of the island. A closer look will reveal a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones.

736: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a very fine beach. A madman who lost his reason due to a head injury and thinks he a scientist who was studying the history of the island, but is really a shipwrecked castaway, is living in a crude hut on the northwest side of the atoll.

737: This small island, 17 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a barren islet offshore on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a crude hut on the highest point of the island. Exploration will reveal nothing else interesting.

738: This large island, 156 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a very fine beach, and a mysterious shrine that appears to have had offerings left within the past few weeks. A recluse who is studying the archaeology of the island is living in a small hut near the highest point of the island. Exploration will reveal a cooking pit containing charred wood and clam shells on the northeastern beach, and a bottle enclosing a message washed up on a northeastern beach.

739: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a stone sculpture of a local legendary figure facing east at the center of the island, and a mysterious shrine that appears to have had offerings left within the past few months.

740: This medium-sized island, 109 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a jutting spit of land on the southern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a very fine beach, a small native village, and a rock outcrop shaped like a skull on the southeast end of the island. A treasure seeker with a secret map is living in a tent on the northwestern shore. A closer look will reveal traces of a decades-old shipwreck on the southwestern shore.

741: This large island, 168 square miles in area, surrounds an apparently extinct volcano. It is nearly circular in shape, with a barren islet offshore on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include weird ancient ruins, a small native village, a lava tube cave, and another small native village. Further examination will reveal a population of exceptionally large crabs, and a human skeleton on the southern beach.

742: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a coral sculpture of a fish on the eastern shore. A madman who lost his reason due to a drug administered to him by someone else and thinks he is preparing to conquer the world, but is really hiding from an enemy, is living in a tent on the highest point of the island.

743: This medium-sized island, 86 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a rock outcrop

shaped like a man's head on the southeast end of the island a small native village, and a mysterious shrine that appears to have had offerings left within the past few days. Exploration will reveal nothing else interesting.

744: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include mysterious ancient ruins, and a coral sculpture of a fish at the center of the island. Further examination will reveal nothing else interesting.

745: This large island, 159 square miles in area, is mountainous, and has an active volcano. It is roughly oval in shape, with a sheltered lagoon on the western side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a very fine beach, a lava tube cave, a very fine beach, a small native village, and a stone sculpture of a chief facing north at the center of the island. A treasure seeker with a secret map is living in a small hut near the highest point of the island. Further examination will reveal a crude grave marker on the western end of the island. Digging there reveals only a few old bones, and mysterious text chisled into a rock on the northern end.

746: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the southeast side of the atoll.

747: This huge island, 354 square miles in area, is mountainous, including an apparently extinct volcano. It is almost oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and three ponds. Notable features include a wooden sculpture of a chief facing inland on the southern shore, a small native village, another small native village, and a 119-foot-tall waterfall (with a cave behind it). A closer look will reveal a crate containing preserved food, apparently spoiled, washed up on the northern beach, and a substantial amount of driftwood on the southwestern beach.

748: This medium-sized island, 75 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a sea cave on the southeastern side. Its vegetation consists of open forest. There is a freshwater stream. It has no notable features. Further examination will reveal a crate containing a supply of ship's biscuit, full of weevils and waterlogged, washed up on the eastern beach. There is a pirate outpost here, occupied by 9 pirates. A pirate ship is anchored offshore, temporarily adding its crew to the population.

749: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the northeast side of the atoll.

750: This small island, 14 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape, with a cove on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, now deserted, another small native village, a stone sculpture of a whale at the highest point of the island, and a lava tube cave. A mad scientist is living in a lean-to on the northeastern shore. Further examination will reveal a seabird rookery on some offshore rocks to the west.

751: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the south side of the atoll.

752: This small island, 18 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the eastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, a mysterious shrine that appears to have had offerings left within the past few months, and a rock outcrop shaped like a ship on the northwest end of

the island. Further examination will reveal nothing else interesting.

753: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and a coral sculpture of a fish on the northeastern shore.

754: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the northeast side of the atoll.

755: This large island, 172 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost circular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. Exploration will reveal traces of a decades-old shipwreck on the southeastern shore, and a crude grave marker on the southeastern end of the island. Digging there reveals only a few old bones.

756: This huge island, 351 square miles in area, is mountainous, and has five active volcanos. It is generally circular in shape, with a cove on the northern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a small native village, a volcanic crater with a lava lake and fire fountains, and a very fine beach. A prospector is living in a small house near the highest point of the island. Further examination will reveal a patch of quicksand near a stream to the northwest, and some random flotsam and jetsam on the northern beach.

757: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the northeast side of the atoll.

758: This large island, 160 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost circular in shape, with a cove on the northern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a rough hut invisible from the shore on the southwestern side of the island. A closer look will reveal a bare footprint on the eastern beach, and a crude grave marker on the southern end of the island. Digging there reveals a chest of buried pirate treasure.

759: This small island, 16 square miles in area, surrounds an active volcano (10% chance of eruption). It is roughly oval in shape, with a jutting spit of land on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. The only feature of note is a very fine beach. A prospector is living in a grass hut invisible from the shore on the northeastern side of the island. A closer look will reveal hot spring on the northwest side of the volcano.

760: This huge island, 360 square miles in area, surrounds an active volcano (35% chance of eruption). It is irregular in shape, with a cove on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. It has no notable features. A madman who lost his reason due to eating some strange berries he found on the island and thinks he a scientist who was studying the history of the island, but is really a shipwrecked castaway, is living in a lean-to invisible from the shore on the northeastern side of the island. Exploration will reveal a crate containing a supply of ship's biscuit, full of weevils and waterlogged, washed up on the northern beach, and a human skeleton in the northwestern part of the island.

761: This huge island, 364 square miles in area, is mountainous, and has two active volcanos. It is roughly rectangular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a 96-foot-tall waterfall, a very fine beach, disturbing ancient ruins, a mysterious shrine that appears to have had offerings left within the past few months, and

a swampy area. A mad scientist is living in a small hut on the southeastern shore. A closer look will reveal some random flotsam and jetsam on the eastern beach, and a bare footprint on the southwestern beach.

762: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the west side of the atoll.

763: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a wooden sculpture of a squid facing inland on the northwestern shore, and .

764: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly circular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a wooden sculpture of a chief facing toward the sea on the western shore, and weird ancient ruins.

765: This medium-sized island, 110 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a sheltered lagoon on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a very fine beach, a lava tube cave, a mysterious shrine that appears to have had offerings left within the past few weeks, and a small native village. A closer look will reveal some random flotsam and jetsam on the southeastern beach.

766: This medium-sized island, 101 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a cove on the northern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a coral sculpture of a local legendary figure facing west at the center of the island, a mysterious shrine that appears to have had offerings left within the past few days, and a small native village. Further examination will reveal mysterious text chisled into a rock on the northern end.

767: This small island, 10 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a jutting spit of land on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and another small native village. A shipwrecked castaway is living in a flimsy hut invisible from the shore on the northern side of the island. A closer look will reveal a seabird rookery on some offshore rocks to the southwest.

768: This medium-sized island, 77 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, another small native village, and a coral sculpture of a local legendary figure facing north at the center of the island. Further examination will reveal nothing else interesting.

769: This large island, 168 square miles in area, is mountainous, and has three active volcanos. It is generally rectangular in shape, with a sea cave on the southern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a rock outcrop shaped like a skull on the east end of the island, a small native village, now deserted, and a swampy area. A recluse who is hiding from the law is living in a lean-to near the highest point of the island. Further examination will reveal marks of a recent canoe landing on the northern beach, and mysterious text chisled into a rock on the northeastern end.

770: This small island, 13 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a barren islet offshore on the western side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a lean-to invisible from the shore on the northern side of the island. A closer look will reveal marks of a recent canoe landing on the eastern beach.

771: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a small native village, and mysterious ancient ruins. Exploration will reveal nothing else interesting.

772: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a stone sculpture of a squid facing toward the sea on the eastern shore, and .

773: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A recluse who is seeking religious enlightenment is living in a crude hut on the north side of the atoll. Further examination will reveal nothing else interesting.

774: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a barren islet offshore on the eastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the northeast end of the island, and a very fine beach.

775: This large island, 170 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a jutting spit of land on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. It has no notable features. A madman who lost his reason due to the effects of a tropical disease and thinks he is a prisoner of pirates who was marooned here, but is really the last survivor of an expedition to the island, is living in a tent near the highest point of the island. Exploration will reveal traces of a decades-old shipwreck on the western shore, and mysterious text chisled into a rock on the eastern end.

776: This medium-sized island, 90 square miles in area, surrounds an active volcano (45% chance of eruption). It is generally oval in shape, with a sea cave on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a small native village, mysterious ancient ruins, another small native village, and a coral sculpture of a fish on the southern shore. A treasure seeker with a secret map is living in a crude hut on the southern shore. Further examination will reveal the remains of an old camp on the southwest side of the island.

777: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a coral sculpture of an unrecognizable being facing west at the highest point of the island. A shipwrecked castaway is living in a lean-to near the highest point of the island.

778: This large island, 161 square miles in area, surrounds an active volcano (5% chance of eruption). It is long and narrow in shape, with a sea cave on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. An escaped slave from a nearby country is living in a lean-to on the eastern shore. A closer look will reveal the remains of an old camp on the southwest side of the island, and the remains of an old camp on the west side of the island.

779: This medium-sized island, 90 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a sheltered lagoon on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a freshwater stream. It has no notable features. A closer look will reveal marks of a recent canoe landing on the southwestern beach. There is a pirate outpost here, occupied by 14 pirates.

780: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and . A shipwrecked castaway is living in a rough hut on the southeast side of the atoll.

781: This large island, 167 square miles in area, surrounds an active volcano (35% chance of eruption). It is long and narrow in shape, with a cove on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a lean-to near the highest point of the island. Exploration will reveal a crude grave marker on the northeastern end of the island. Digging there reveals only a few old bones, and a bottle enclosing a message washed up on a western beach.

782: This large island, 170 square miles in area, surrounds an active volcano (5% chance of eruption). It is long and narrow in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a cave. A shipwrecked castaway is living in a crude hut on the western shore. Exploration will reveal a population of brightly-colored crabs, and a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones.

783: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the south side of the atoll.

784: This huge island, 403 square miles in area, surrounds an apparently extinct volcano. It is generally circular in shape, with a sea cave on the southern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a camp on the southeastern shore. Further examination will reveal a substantial amount of driftwood on the western beach, and a population of exceptionally large crabs.

785: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a ship on the southeast end of the island a mysterious shrine that appears to have had offerings left within the past few weeks, and a coral sculpture of a fish on the southern shore.

786: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A shipwrecked castaway is living in a rough hut on the northwest side of the atoll.

787: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a coral sculpture of a chief facing east at the center of the island. A shipwrecked castaway is living in a crude hut on the southeast side of the atoll.

788: This medium-sized island, 100 square miles in area, is mountainous, and has three active volcanos. It is roughly oval in shape, with a cove on the eastern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a volcanic crater with a lava lake and fire fountains, a rock outcrop shaped like a skull on the southeast end of the island high cliffs, and a very fine beach. A closer look will reveal a substantial amount of driftwood on the northern beach.

789: This small island, 12 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately rectangular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of a few

palm trees along the shore. There is a small freshwater spring. The only feature of note is a very fine beach. A shipwrecked castaway is living in a crude hut on the northeastern shore. Exploration will reveal a bare footprint on the western beach.

790: This huge island, 310 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and three ponds. Notable features include a lava tube cave, high cliffs, and a small native village. Further examination will reveal marks of a recent canoe landing on the southwestern beach, and a population of exceptionally large crabs.

791: This medium-sized island, 63 square miles in area, surrounds an apparently extinct volcano. It is nearly circular in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a 54-foot-tall waterfall. Exploration will reveal a bare footprint on the southern beach.

792: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few months. A mutinous sailor who was marooned here is living in a rough hut on the southwest side of the atoll. A closer look will reveal a population of enormous crabs.

793: This large island, 151 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly rectangular in shape, with a sea cave on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and a small native village. Exploration will reveal mysterious text chiseled into a rock on the northern end, and a population of oddly rectangular crabs.

794: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. Exploration will reveal marks of a recent canoe landing on the northwestern beach.

795: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who has fled from creditors is living in a rough hut on the southwest side of the atoll. Further examination will reveal a crude grave marker on the eastern end of the island. Digging there reveals only a few old bones.

796: This small island, 17 square miles in area, surrounds an active volcano (50% chance of eruption). It is nearly rectangular in shape, with a cove on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a small native village, weird ancient ruins, and another small native village. Exploration will reveal a crude grave marker on the eastern end of the island. Digging there reveals only a few old bones.

797: This large island, 167 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a sea cave on the western side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the highest point of the island. Further examination will reveal marks of a recent canoe landing on the northwestern beach, and traces of a decades-old shipwreck on the northern shore.

798: This medium-sized island, 92 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a cove on the northwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A treasure seeker with a secret map is living in a rough hut invisible from the shore on the northeastern side of the island. Exploration will reveal some random flotsam and jetsam on the

southeastern beach.

799: This medium-sized island, 94 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a freshwater stream. Notable features include disturbing ancient ruins, and a lava tube cave. A treasure seeker with a secret map is living in a small hut on the western shore. A closer look will reveal a lake in the volcano's crater.

800: This medium-sized island, 109 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a cave, a small native village, and another small native village. Further examination will reveal a crude grave marker on the northeastern end of the island. Digging there reveals only a few old bones.

801: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a barren islet offshore on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. The only feature of note is disturbing ancient ruins.

802: This huge island, 361 square miles in area, is mountainous, and has five active volcanos. It is almost rectangular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a cave, a lava tube cave, and a small native village. Further examination will reveal a seabird rookery on some offshore rocks to the southwest, and mysterious text chisled into a rock on the northern end.

803: This large island, 170 square miles in area, is mountainous, and has four active volcanos. It is long and narrow in shape, with a sheltered lagoon on the western side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and two ponds. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, a small native village, another small native village, a rock outcrop shaped like a monkey on the north end of the island, and mysterious ancient ruins. Further examination will reveal a cooking pit containing charred wood and clam shells on the southern beach, and a population of exceptionally large crabs.

804: This large island, 176 square miles in area, is mountainous, and has three active volcanos. It is long and narrow in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, a cave, another small native village, and a volcanic crater with a lava lake and fire fountains. A closer look will reveal a substantial amount of driftwood on the southern beach, and a bare footprint on the southern beach.

805: This small island, 15 square miles in area, surrounds an active volcano (25% chance of eruption). It is roughly rectangular in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a swampy area, a small native village, and a swampy area. A prospector is living in a small hut invisible from the shore on the southwestern side of the island. Further examination will reveal a crate containing various books, washed up on the northern beach.

806: This small island, 10 square miles in area, surrounds an active volcano (35% chance of eruption). It is long and narrow in shape, with a cove on the western side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a swampy area, and strange ancient ruins. A closer look will reveal nothing else interesting.

807: This huge island, 340 square miles in area, is mountainous, and has five active volcanos. It is almost rectangular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a native village, now deserted, a volcanic crater with a lava lake and fire fountains, a mysterious shrine that appears to have had offerings left within the past

few days, another native village, and weird ancient ruins. Further examination will reveal hot spring on the southwest side of the volcano, and a crate containing various books, washed up on the northeastern beach.

808: This large island, 173 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a barren islet offshore on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a rock outcrop shaped like a skull on the northwest end of the island a cave, a small native village, now deserted, and another small native village. Exploration will reveal a seabird rookery on some offshore rocks to the southwest, and traces of a decades-old shipwreck on the northeastern shore.

809: This small island, 16 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a sea cave on the northeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a rough hut on the eastern shore. Further examination will reveal a crude grave marker on the northern end of the island. Digging there reveals a chest of buried pirate treasure.

810: This large island, 157 square miles in area, is mountainous, and has three active volcanos. It is nearly rectangular in shape, with a cove on the western side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a rock outcrop shaped like a monkey on the northeast end of the island a mysterious shrine that appears to have had offerings left within the past few days, a coral sculpture of a fish at the highest point of the island, and disturbing ancient ruins. An escaped slave from a nearby country is living in a lean-to in the jungle on the southwestern side of the island. Further examination will reveal a population of brightly-colored crabs, and a crude grave marker on the northwestern end of the island. Digging there reveals only a few old bones.

811: This medium-sized island, 96 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a barren islet offshore on the southwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include anomalous ancient ruins, and a very fine beach. Exploration will reveal a population of exceptionally large crabs.

812: This large island, 160 square miles in area, is mountainous, and has two active volcanos. It is long and narrow in shape, with a sea cave on the northwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a stone sculpture of a canoe on the southwestern shore, anomalous ancient ruins, a small native village, another small native village, and a swampy area. Exploration will reveal a bare footprint on the northwestern beach, and a substantial amount of driftwood on the eastern beach.

813: This small island, 15 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a rock outcrop shaped like a skull on the southeast end of the island. Exploration will reveal nothing else interesting. There is a pirate outpost here, occupied by 14 pirates.

814: This small island, 10 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a cove on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a small hut on the northwestern shore. Further examination will reveal a substantial amount of driftwood on the eastern beach.

815: This small island, 16 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There is a freshwater stream. Notable features include a very fine beach, a small native village, and a mysterious shrine that appears to have had offerings left within the past few weeks. Further examination will reveal a crude grave marker on the northern end of the island. Digging there reveals only a few old bones.

816: This medium-sized island, 84 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of a few palm trees along the shore. There is a freshwater stream. It has no notable features. A madman who lost his reason due to a head injury and thinks he is preparing to conquer the world, but is really a prisoner of pirates who was marooned here, is living in a flimsy hut invisible from the shore on the northwestern side of the island. Exploration will reveal traces of a decades-old shipwreck on the northern shore.

817: This huge island, 409 square miles in area, is mountainous, and has an active volcano. It is nearly oval in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a lava tube cave, a mysterious shrine that appears to have had offerings left within the past few days, a 81-foot-tall waterfall (with a cave behind it), and a small native village. Exploration will reveal some random flotsam and jetsam on the northern beach, and traces of a decades-old shipwreck on the southern shore.

818: This small island, 15 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly circular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A treasure seeker with a secret map is living in a crude hut invisible from the shore on the northeastern side of the island. Further examination will reveal nothing else interesting.

819: This small island, 13 square miles in area, surrounds an active volcano (30% chance of eruption). It is nearly rectangular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a cave. A recluse who is studying the biology of the island is living in a lean-to on the southern shore. A closer look will reveal a human skeleton in the northern part of the island.

820: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from the law is living in a grass hut on the east side of the atoll.

821: This small island, 16 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost circular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a lean-to near the highest point of the island. Further examination will reveal nothing else interesting.

822: This large island, 167 square miles in area, is mountainous, and has three active volcanos. It is long and narrow in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a very fine beach, a small native village, now deserted, and another small native village. Exploration will reveal mysterious text chisled into a rock on the western end, and marks of a recent canoe landing on the southeastern beach.

823: This huge island, 424 square miles in area, is mountainous, and has an active volcano. It is nearly circular in shape, with a sea cave on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a rock outcrop shaped like a skull on the east end of the island, a mysterious shrine that appears to have had offerings left within the past few weeks, a 98-foot-tall waterfall, a small native village, and disturbing ancient ruins. A closer look will reveal traces of a decades-old shipwreck on the southwestern shore, and a human skeleton in the western part of the island.

824: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. Exploration will reveal some random flotsam and jetsam on the northeastern beach.

825: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a coral sculpture of a chief facing inland on the northwestern shore. A recluse who is hiding from the law is living in a flimsy hut near the highest point of the island.

826: This huge island, 355 square miles in area, is mountainous, and has five active volcanos. It is irregular in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a cave, a very fine beach, a very fine beach, and a swampy area. A shipwrecked castaway is living in a lean-to near the highest point of the island. Exploration will reveal a crude grave marker on the northern end of the island. Digging there reveals only a few old bones, and traces of a decades-old shipwreck on the southern shore.

827: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A stowaway who was marooned here is living in a rough hut on the northwest side of the atoll.

828: This large island, 154 square miles in area, is mountainous, and has four active volcanos. It is generally oval in shape, with a cove on the southwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, a volcanic crater with a lava lake and fire fountains, a cave, and a swampy area. Further examination will reveal some random flotsam and jetsam on the southeastern beach, and a substantial amount of driftwood on the eastern beach. There is a pirate outpost here, occupied by 11 pirates.

829: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A mutinous sailor who was marooned here is living in a flimsy hut on the east side of the atoll.

830: This huge island, 332 square miles in area, surrounds an active volcano (30% chance of eruption). It is generally oval in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. The only feature of note is a wooden sculpture of a chief facing toward the sea on the northeastern shore. A closer look will reveal hot spring on the east side of the volcano, and some random flotsam and jetsam on the northwestern beach.

831: This medium-sized island, 122 square miles in area, is mountainous, and has three active volcanos. It is generally rectangular in shape, with a barren islet offshore on the southwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include strange ancient ruins, a volcanic crater with a lava lake and fire fountains, a swampy area, and a rock outcrop shaped like a skull on the northwest end of the island. A shipwrecked family is living in a tree house invisible from the shore on the northwestern side of the island. A closer look will reveal a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones.

832: This large island, 164 square miles in area, is mountainous, and has three active volcanos. It is nearly oval in shape, with a cove on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a small native village, a very fine beach, another small native village, and a mysterious shrine that appears to have had offerings left within the past few days. Further examination will reveal a crude grave marker on the southeastern end of the island. Digging there reveals only a few old bones, and a patch of quicksand near a stream to the northeast.

833: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the southwest

side of the atoll.

834: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the south side of the atoll.

835: This small island, 19 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally oval in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the northeast end of the island, and a coral sculpture of a chief facing north at the highest point of the island. A madman who lost his reason due to a head injury and thinks he came here seeking religious enlightenment, but is really a shipwrecked castaway, is living in a flimsy hut invisible from the shore on the northeastern side of the island. A closer look will reveal a human skeleton in the northern part of the island.

836: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the southeast side of the atoll.

837: This small island, 19 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a cave, and high cliffs. A madman who lost his reason due to great emotional trauma and thinks he came here seeking religious enlightenment, but is really someone who came here seeking religious enlightenment, is living in a lean-to invisible from the shore on the southern side of the island. Further examination will reveal a bottle enclosing a message washed up on a western beach.

838: This large island, 176 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a small native village. Further examination will reveal a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones, and the remains of an old camp on the southeast side of the island.

839: This huge island, 339 square miles in area, is mountainous, and has two active volcanos. It is irregular in shape, with a jutting spit of land on the western side. Its vegetation consists of a dense jungle. There are numerous freshwater streams and three ponds. Notable features include high cliffs, a small native village, and another small native village. Further examination will reveal some random flotsam and jetsam on the northeastern beach, and a human skeleton on the northeastern beach.

840: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few months.

841: This large island, 155 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a cove on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a small native village. A shipwrecked castaway is living in a lean-to on the southwestern shore. Further examination will reveal some random flotsam and jetsam on the northeastern beach, and hot spring on the north side of the volcano.

842: This huge island, 427 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a stone sculpture of an

unrecognizable being facing west at the center of the island, a mysterious shrine that appears to have had offerings left within the past few days, a small native village, and a very fine beach. A closer look will reveal mysterious text chisled into a rock on the southern end, and a population of brightly-colored crabs.

843: This huge island, 352 square miles in area, is mountainous, and has four active volcanos. It is generally circular in shape, with a cove on the western side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a cave, a native village, now deserted, another native village, and a volcanic crater with a lava lake and fire fountains. Further examination will reveal a seabird rookery on some offshore rocks to the west, and a bottle enclosing a message washed up on a southeastern beach.

844: This huge island, 332 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a cove on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and a pond. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and anomalous ancient ruins. A madman who lost his reason due to a drug administered to him by someone else and thinks he is preparing to conquer the world, but is really someone who came here seeking religious enlightenment, is living in a lean-to invisible from the shore on the northwestern side of the island. Further examination will reveal a lake in the volcano's crater, and a bottle enclosing a message washed up on a western beach.

845: This large island, 157 square miles in area, is mountainous, and has three active volcanos. It is long and narrow in shape, with a sea cave on the northern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a very fine beach, a very fine beach, and weird ancient ruins. A madman who lost his reason due to drink and thinks he came here seeking religious enlightenment, but is really hiding from an enemy, is living in a tent on the highest point of the island. A closer look will reveal a patch of quicksand near a stream to the southeast, and some random flotsam and jetsam on the southwestern beach.

846: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the northwest side of the atoll.

847: This small island, 2 square miles in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and a very fine beach. A recluse who is hiding from an enemy is living in a rough hut on the southeast side of the atoll. A closer look will reveal some random flotsam and jetsam on the northeastern beach.

848: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a sea cave on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a fish on the northern shore, mysterious ancient ruins, and a very fine beach.

849: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A recluse who is hiding from an enemy is living in a tent on the east side of the atoll.

850: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a barren islet offshore on the eastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. The only feature of note is mysterious ancient ruins.

851: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly oval in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There is a small

freshwater spring. Notable features include weird ancient ruins, and a mysterious shrine that appears to have had offerings left within the past few days.

852: This huge island, 360 square miles in area, is mountainous, and has five active volcanos. It is roughly rectangular in shape, with a sea cave on the western side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a small native village, strange ancient ruins, another small native village, and a lava tube cave. Further examination will reveal marks of a recent canoe landing on the northwestern beach, and a population of oddly rectangular crabs.

853: This huge island, 342 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a small native village, and a cave. A mutinous sailor who was marooned here is living in a small hut invisible from the shore on the northeastern side of the island. A closer look will reveal the remains of an old camp on the southeast side of the island, and a population of brightly-colored crabs.

854: This large island, 174 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a jutting spit of land on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, a lava tube cave, strange ancient ruins, and a swampy area. A closer look will reveal a bare footprint on the eastern beach, and marks of a recent canoe landing on the northeastern beach.

855: This large island, 173 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include a small native village, and a rock outcrop shaped like a skull on the west end of the island. A closer look will reveal a crude grave marker on the southern end of the island. Digging there reveals only a few old bones, and a bottle enclosing a message washed up on a southern beach.

856: This medium-sized island, 66 square miles in area, is mountainous, including two apparently extinct volcanos. It is long and narrow in shape, with a barren islet offshore on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a 108-foot-tall waterfall (with a cave behind it), a swampy area, a small native village, and high cliffs. A closer look will reveal a cooking pit containing charred wood and clam shells on the northeastern beach.

857: This large island, 160 square miles in area, surrounds an active volcano (50% chance of eruption). It is approximately rectangular in shape, with a cove on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, another small native village, and a lava tube cave. Further examination will reveal traces of a decades-old shipwreck on the southeastern shore, and marks of a recent canoe landing on the southern beach.

858: This huge island, 404 square miles in area, surrounds an apparently extinct volcano. It is almost oval in shape, with a sheltered lagoon on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and a pond. Notable features include a small native village, a rock outcrop shaped like a man's head on the west end of the island, and disturbing ancient ruins. Exploration will reveal marks of a recent canoe landing on the northern beach, and a human skeleton in the northern part of the island.

859: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from an enemy is living in a crude hut on the west side of the atoll.

860: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. The only feature of note is a small native village. Exploration will reveal some random flotsam and jetsam on the northern

beach.

861: This small island, 21 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a sea cave on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A mutinous sailor who was marooned here is living in a small hut on the eastern shore. Further examination will reveal nothing else interesting.

862: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and a coral sculpture of an octopus facing east at the center of the island.

863: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a rough hut on the northwestern shore.

864: This small island, 16 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a cove on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a rock outcrop shaped like a ship on the southeast end of the island. Exploration will reveal hot spring on the north side of the volcano.

865: This medium-sized island, 104 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly oval in shape, with a cove on the southern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. The only feature of note is a small native village. A shipwrecked castaway is living in a crude hut on the highest point of the island. Further examination will reveal nothing else interesting.

866: This medium-sized island, 66 square miles in area, is mountainous, and has three active volcanos. It is nearly rectangular in shape, with a sheltered lagoon on the southern side. Its vegetation consists of a dense jungle. There is a small freshwater spring. Notable features include a volcanic crater with a lava lake and fire fountains, strange ancient ruins, and a swampy area. A shipwrecked family is living in a tent on the northwestern shore. Exploration will reveal a human skeleton on the northeastern beach.

867: This small island, 17 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately circular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is disturbing ancient ruins. A closer look will reveal a bottle enclosing a message washed up on a eastern beach.

868: This medium-sized island, 75 square miles in area, is mountainous, and has an active volcano. It is almost rectangular in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a lava tube cave, a mysterious shrine that appears to have had offerings left within the past few months, a rock outcrop shaped like a skull on the east end of the island, a very fine beach, and a small native village. Exploration will reveal nothing else interesting.

869: This large island, 155 square miles in area, is mountainous, including four apparently extinct volcanos. It is nearly circular in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and two ponds. Notable features include a wooden sculpture of a fish at the center of the island, a 76-foot-tall waterfall, a very large extinct volcanic crater, and a cave. A madman who lost his reason due to a head injury and thinks he is hiding from an enemy, but is really a shipwrecked castaway, is living in a tree house invisible from the shore on the western side of the island. A closer look will reveal a bare footprint on the

western beach, and some random flotsam and jetsam on the northern beach.

870: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is generally circular in shape, with a sea cave on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and anomalous ancient ruins. A recluse who is hiding from the law is living in a tent on the northern shore.

871: This medium-sized island, 72 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, and a very fine beach. A closer look will reveal nothing else interesting. There is a large pirate base, with 91 permanent residents, on this island. A pirate ship is present, temporarily adding its crew to the population.

872: This large island, 158 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a sea cave on the southeastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include anomalous ancient ruins, and a rock outcrop shaped like a skull on the north end of the island. Further examination will reveal some random flotsam and jetsam on the eastern beach, and mysterious text chisled into a rock on the northern end. There is a pirate town, with 314 permanent residents, on this island. Three pirate ships are at the docks, arriving, or departing, temporarily adding their crews to the population.

873: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a cove on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the east end of the island, and a mysterious shrine that appears to have had offerings left within the past few weeks.

874: This small island, 14 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a freshwater stream. Notable features include a small native village, and high cliffs. A mad scientist is living in a small hut invisible from the shore on the western side of the island. Further examination will reveal a substantial amount of driftwood on the southeastern beach.

875: This small island, 19 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a cove on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few days. A recluse who is studying the geology of the island is living in a tent on the southern shore. A closer look will reveal nothing else interesting.

876: This large island, 163 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sea cave on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, and another small native village. A mad scientist is living in a grass hut near the highest point of the island. Exploration will reveal traces of a decades-old shipwreck on the western shore, and hot spring on the southwest side of the volcano.

877: This small island, 16 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A mad scientist is living in a flimsy hut on the eastern shore. Further examination will reveal a substantial amount of driftwood on the western beach.

878: This large island, 147 square miles in area, surrounds an active volcano (20% chance of eruption). It is generally circular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, a small native village, mysterious ancient ruins, and a 49-foot-tall waterfall. Exploration will reveal a patch of quicksand near a stream to the west, and a patch of quicksand near a stream to the northwest.

879: This large island, 152 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is roughly circular in shape, with a jutting spit of land on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include a rock outcrop shaped like a skull on the southeast end of the island, a small native village, and a very fine beach. A mad scientist is living in a grass hut near the highest point of the island. Exploration will reveal a population of oddly rectangular crabs, and a crate containing nothing but a sailor's clothes, ruined by salt water, washed up on the northeastern beach.

880: This large island, 152 square miles in area, is mountainous, and has two active volcanos. It is nearly oval in shape, with a cove on the southern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a rock outcrop shaped like a skull on the northwest end of the island, a lava tube cave, a native village, and high cliffs. A shipwrecked castaway is living in a small hut on the highest point of the island. Further examination will reveal some random flotsam and jetsam on the northeastern beach, and a hot spring on the west side of the volcano.

881: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few months. A recluse who is hiding from an enemy is living in a tent on the east side of the atoll.

882: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include , and .

883: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is mysterious ancient ruins. A shipwrecked castaway is living in a rough hut on the northwest side of the atoll.

884: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly rectangular in shape, with a cove on the southern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut near the highest point of the island.

885: This huge island, 378 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape, with a cove on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and a pond. Notable features include a coral sculpture of a chief facing north at the highest point of the island, and high cliffs. Exploration will reveal a bare footprint on the northeastern beach, and marks of a recent canoe landing on the northeastern beach. There is a large pirate base, with 99 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

886: This medium-sized island, 72 square miles in area, is mountainous, and has three active volcanos. It is generally rectangular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include high cliffs, a small native village, another small native village, and a native ritual center. A recluse who is seeking religious enlightenment is living in a small house on the northeastern shore. Further examination will reveal a patch of quicksand near a stream to the northeast.

887: This large island, 171 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a cove on the southern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. The only feature of note is a rock outcrop shaped like a ship on the east end of the island. A madman who lost his reason due to great emotional trauma and thinks he a scientist who was studying the geology of the island, but is really hiding from an enemy, is living in a tent invisible from the shore on the western side of the island. Further examination will reveal a substantial amount of driftwood on the northern beach, and a bottle enclosing a message washed up on a northern beach.

888: This medium-sized island, 103 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a sea cave on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, a mysterious shrine that appears to have had offerings left within the past few months, a swampy area, and another small native village. Exploration will reveal nothing else interesting.

889: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a barren islet offshore on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include a very fine beach, a rock outcrop shaped like a skull on the southeast end of the island, and anomalous ancient ruins. A treasure seeker with a secret map is living in a crude hut invisible from the shore on the northwestern side of the island.

890: This medium-sized island, 89 square miles in area, surrounds an apparently extinct volcano. It is nearly circular in shape, with a cove on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a very fine beach. Exploration will reveal hot spring on the west side of the volcano.

891: This large island, 149 square miles in area, surrounds an apparently extinct volcano. It is almost rectangular in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. Further examination will reveal a bottle enclosing a message washed up on a eastern beach, and a patch of quicksand near a stream to the south. There is a large pirate base, with 73 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

892: This large island, 160 square miles in area, is mountainous, and has four active volcanos. It is generally circular in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a cave, a lava tube cave, and a native village. Exploration will reveal a cooking pit containing charred wood and clam shells on the northwestern beach, and a seabird rookery on some offshore rocks to the northwest.

893: This large island, 174 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the southern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include mysterious ancient ruins, and a small native village. A mad scientist is living in a flimsy hut invisible from the shore on the northwestern side of the island. Further examination will reveal a bottle enclosing a message washed up on a southeastern beach, and marks of a recent canoe landing on the northwestern beach.

894: This small island, 12 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a sheltered lagoon on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A mad scientist is living in a rough hut on the eastern shore. Further examination will reveal nothing else interesting.

895: This large island, 170 square miles in area, is mountainous, and has an active volcano. It is nearly rectangular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a lava tube cave, a very fine beach, and a swampy area. A

shipwrecked castaway is living in a lean-to invisible from the shore on the western side of the island. Further examination will reveal a population of enormous crabs, and a bottle enclosing a message washed up on a southeastern beach.

896: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a cove on the northeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a crab on the southwestern shore, a mysterious shrine that appears to have had offerings left within the past few days, and a very fine beach.

897: This medium-sized island, 98 square miles in area, is mountainous, and has an active volcano. It is irregular in shape, with a sea cave on the eastern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a small native village, a valley of living prehistoric creatures, a lava tube cave, and a giant snake which is feared by the local inhabitants. A closer look will reveal mysterious text chisled into a rock on the southeastern end.

898: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is .

899: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a cove on the southwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few months, and a wooden sculpture of a local legendary figure facing south at the center of the island.

900: This large island, 174 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a coral sculpture of a fish at the highest point of the island, and a small native village. A shipwrecked castaway is living in a small hut on the southwestern shore. Further examination will reveal a seabird rookery on some offshore rocks to the south, and hot spring on the southeast side of the volcano.

901: This huge island, 338 square miles in area, is mountainous, and has an active volcano. It is irregular in shape, with a sea cave on the southwestern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, high cliffs, a small native village, and a cave. Further examination will reveal a seabird rookery on some offshore rocks to the southeast, and a seabird rookery on some offshore rocks to the east.

902: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and weird ancient ruins.

903: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a stone sculpture of a chief facing north at the center of the island, and . A shipwrecked castaway is living in a flimsy hut on the south side of the atoll.

904: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a flimsy hut on the northeast side of the atoll.

905: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include a wooden sculpture of a fish on the northern shore, and mysterious ancient ruins. A treasure seeker with a secret map is living in a tent on the northeastern shore.

906: This small island, 10 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally oval in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. The only feature of note is a very fine beach. A madman who lost his reason due to a drug administered to him by someone else and thinks he is hiding from an enemy, but is really fleeing from creditors, is living in a tent on the northeastern shore. A closer look will reveal a bottle enclosing a message washed up on a northeastern beach.

907: This small island, 23 square miles in area, surrounds an active volcano (10% chance of eruption). It is roughly circular in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a cave, and a small native village. A shipwrecked castaway is living in a small hut invisible from the shore on the southern side of the island. Exploration will reveal nothing else interesting.

908: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a cove on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include a mysterious shrine that appears to have had offerings left within the past few weeks, anomalous ancient ruins, and a very fine beach. A recluse who is seeking religious enlightenment is living in a rough hut on the northern shore.

909: This large island, 175 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a jutting spit of land on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a coral sculpture of a local legendary figure facing south at the center of the island, and a cave. A shipwrecked castaway is living in a rough hut invisible from the shore on the western side of the island. A closer look will reveal a seabird rookery on some offshore rocks to the southwest, and a bottle enclosing a message washed up on a southwestern beach.

910: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a sheltered lagoon on the western side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the east end of the island, and mysterious ancient ruins.

911: This small island, 15 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a sheltered lagoon on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a rough hut on the highest point of the island. Exploration will reveal nothing else interesting.

912: This large island, 167 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a cove on the eastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. A madman who lost his reason due to the effects of a tropical disease and thinks he is preparing to conquer the world, but is really fleeing from creditors, is living in a tent invisible from the shore on the southern side of the island. A closer look will reveal a human skeleton in the northwestern part of the island, and some random flotsam and jetsam on the southern beach.

913: This large island, 163 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long

and narrow in shape, with a cove on the eastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. It has no notable features. Exploration will reveal a crude grave marker on the northern end of the island. Digging there reveals only a few old bones, and marks of a recent canoe landing on the northwestern beach. There is a pirate town, with 286 permanent residents, on this island. Five pirate ships are at the docks, arriving, or departing, temporarily adding their crews to the population.

914: This tiny island, right around 1 square mile in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly rectangular in shape, with a barren islet offshore on the northern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut invisible from the shore on the eastern side of the island.

915: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include , and .

916: This huge island, 358 square miles in area, is mountainous, and has four active volcanos. It is nearly circular in shape, with a sea cave on the northeastern side. Its vegetation consists of open forest. There are numerous freshwater streams and three ponds. Notable features include a cave, a lava tube cave, a rock outcrop shaped like a skull on the south end of the island a swampy area, and a mysterious shrine that appears to have had offerings left within the past few weeks. Exploration will reveal a human skeleton in the eastern part of the island, and a human skeleton in the eastern part of the island.

917: This small island, 19 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a jutting spit of land on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a skull on the northwest end of the island, and mysterious ancient ruins. A shipwrecked castaway is living in a lean-to on the highest point of the island. A closer look will reveal a cooking pit containing charred wood and clam shells on the northwestern beach.

918: This small island, 17 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a sheltered lagoon on the western side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. Exploration will reveal nothing else interesting.

919: This small island, 22 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is roughly circular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a recognizable local legendary figure facing inland on the southwestern shore, weird ancient ruins, and a mysterious shrine that appears to have had offerings left within the past few days. Exploration will reveal nothing else interesting.

920: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include , and .

921: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a barren islet offshore on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a very fine beach, and a wooden sculpture of a chief facing inland on the eastern shore. A shipwrecked castaway is living in a rough hut invisible from the shore on the southeastern side of the island.

922: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a sea cave on the southern side.

Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a man's head on the east end of the island, strange ancient ruins, and a coral sculpture of a chief facing south at the center of the island.

923: This large island, 157 square miles in area, is mountainous, and has an active volcano. It is almost rectangular in shape, with a jutting spit of land on the eastern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a rock outcrop shaped like a man's head on the southeast end of the island, a volcanic crater with a lava lake and fire fountains, and a mysterious shrine that appears to have had offerings left within the past few days. A prospector is living in a small house on the highest point of the island. Exploration will reveal the remains of an old camp on the southeast side of the island, and a substantial amount of driftwood on the southwestern beach.

924: This large island, 164 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the southern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. Notable features include strange ancient ruins, and a small native village. A mad scientist is living in a crude hut near the highest point of the island. A closer look will reveal mysterious text chisled into a rock on the eastern end, and a cooking pit containing charred wood and clam shells on the western beach.

925: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

926: This small island, 15 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A mutinous sailor who was marooned here is living in a rough hut invisible from the shore on the western side of the island. Further examination will reveal mysterious text chisled into a rock on the southeastern end.

927: This huge island, 361 square miles in area, surrounds an active volcano (50% chance of eruption). It is approximately oval in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. It has no notable features. A madman who lost his reason due to the effects of a tropical disease and thinks he is a scientist who was studying the geology of the island, but is really the last survivor of an expedition to the island, is living in a tent on the northwestern shore. Further examination will reveal a seabird rookery on some offshore rocks to the west, and a substantial amount of driftwood on the northeastern beach.

928: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a wooden sculpture of a canoe at the center of the island, and a mysterious shrine that appears to have had offerings left within the past few days. A shipwrecked castaway is living in a flimsy hut on the west side of the atoll.

929: This small island, 21 square miles in area, surrounds an active volcano (5% chance of eruption). It is generally oval in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a very fine beach. A madman who lost his reason due to great emotional trauma and thinks he is a scientist who was studying the history of the island, but is really hiding from an enemy, is living in a flimsy hut invisible from the shore on the northwestern side of the island. Further examination will reveal nothing else interesting.

930: This medium-sized island, 91 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a sheltered lagoon on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, high cliffs, and another small native village, now deserted. Exploration will reveal some random flotsam and jetsam on the western beach.

931: This small island, 9 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost rectangular in shape, with a sea cave on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. It has no notable features. A recluse who is seeking religious enlightenment is living in a lean-to on the southern shore. Exploration will reveal mysterious text chisled into a rock on the eastern end.

932: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is mysterious ancient ruins. A shipwrecked castaway is living in a grass hut on the northwest side of the atoll.

933: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a very fine beach. A recluse who has fled from creditors is living in a tent on the west side of the atoll. A closer look will reveal traces of a decades-old shipwreck on the northwestern shore.

934: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a cove on the western side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a local legendary figure facing north at the center of the island, a rock outcrop shaped like a skull on the north end of the island, and mysterious ancient ruins.

935: This small island, 22 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally rectangular in shape, with a jutting spit of land on the northern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a stone sculpture of a fish at the center of the island, and a rock outcrop shaped like a skull on the southwest end of the island. A mutinous sailor who was marooned here is living in a rough hut near the highest point of the island. Further examination will reveal a crate containing various books, washed up on the southern beach.

936: This tiny island, 2 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly circular in shape, with a jutting spit of land on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A recluse who is hiding from the law is living in a lean-to near the highest point of the island.

937: This medium-sized island, 120 square miles in area, is mountainous, and has three active volcanos. It is irregular in shape, with a cove on the northern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a native village, a swampy area, a swampy area, a very fine beach, and another native village. Exploration will reveal a crude grave marker on the southeastern end of the island. Digging there reveals only a few old bones.

938: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A madman who lost his reason due to a head injury and thinks he is preparing to conquer the world, but is really a shipwrecked castaway, is living in a grass hut on the south side of the atoll.

939: This huge island, 390 square miles in area, surrounds an apparently extinct volcano. It is nearly oval in shape, with a sea cave on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and three ponds. Notable features include a small native village, another small native village, a very fine beach, and a rock outcrop shaped like a monkey on the northeast end of the island. A closer look will reveal a patch of quicksand near a stream to the east, and a patch of quicksand near a stream to

the northeast.

940: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the west side of the atoll. Further examination will reveal nothing else interesting.

941: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a coral sculpture of a chief facing south at the center of the island.

942: This large island, 175 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately oval in shape, with a sheltered lagoon on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A shipwrecked castaway is living in a lean-to on the northern shore. A closer look will reveal a cooking pit containing charred wood and clam shells on the southwestern beach, and some random flotsam and jetsam on the northwestern beach.

943: This medium-sized island, 113 square miles in area, surrounds an active volcano (25% chance of eruption). It is long and narrow in shape, with a cove on the southern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. The only feature of note is a small native village. An escaped slave from a nearby country is living in a lean-to near the highest point of the island. Exploration will reveal nothing else interesting.

944: This medium-sized island, 113 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of open forest. There is a freshwater stream. It has no notable features. A closer look will reveal mysterious text chisled into a rock on the southern end.

945: This large island, 171 square miles in area, surrounds an active volcano (20% chance of eruption). It is nearly rectangular in shape, with a jutting spit of land on the northwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, and a coral sculpture of a local legendary figure facing east at the highest point of the island. A mutinous sailor who was marooned here is living in a rough hut on the northern shore. Exploration will reveal marks of a recent canoe landing on the northern beach, and the remains of an old camp on the northeast side of the island.

946: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is approximately oval in shape, with a jutting spit of land on the northern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a stone sculpture of a chief facing west at the center of the island. A madman who lost his reason due to a head injury and thinks he is hiding from an enemy, but is really someone who came here seeking religious enlightenment, is living in a grass hut near the highest point of the island.

947: This huge island, 349 square miles in area, is mountainous, and has five active volcanos. It is generally oval in shape, with a jutting spit of land on the western side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a small native village, a cave, and a 94-foot-tall waterfall (with a cave behind it). A treasure seeker with a secret map is living in a small hut near the highest point of the island. Further examination will reveal mysterious text chisled into a rock on the southern end, and the remains of an old camp on the southeast side of the island.

948: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

949: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a rough hut on the southeast side of the atoll.

950: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. Exploration will reveal nothing else interesting.

951: This medium-sized island, 107 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a jutting spit of land on the southern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a rock outcrop shaped like a man's head on the north end of the island. A treasure seeker with a secret map is living in a small hut invisible from the shore on the southeastern side of the island. Exploration will reveal nothing else interesting.

952: This medium-sized island, 93 square miles in area, is mountainous, including two apparently extinct volcanos. It is almost rectangular in shape, with a jutting spit of land on the northern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a very fine beach, a stone sculpture of a whale at the highest point of the island, a cave, and a swampy area. Exploration will reveal nothing else interesting. There is a small pirate base, with 29 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

953: This large island, 158 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a sheltered lagoon on the western side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A mad scientist is living in a rough hut near the highest point of the island. A closer look will reveal a crate containing a supply of ship's biscuit, full of weevils and waterlogged, washed up on the southwestern beach, and a lake in the volcano's crater.

954: This small island, 16 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly rectangular in shape, with a jutting spit of land on the western side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. Notable features include a very fine beach, and a small native village. A shipwrecked castaway is living in a grass hut near the highest point of the island. A closer look will reveal nothing else interesting.

955: This large island, 173 square miles in area, surrounds an apparently extinct volcano. It is roughly circular in shape, with a jutting spit of land on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a small native village, and a cave. Further examination will reveal hot spring on the south side of the volcano, and some random flotsam and jetsam on the northwestern beach.

956: This huge island, 390 square miles in area, surrounds an apparently extinct volcano. It is roughly oval in shape, with a cove on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are numerous freshwater streams and a pond. Notable features include a small native village, and weird ancient ruins. A mad scientist is living in a small hut invisible from the shore on the western side of the island. Exploration will reveal a seabird rookery on some offshore rocks to the south, and marks of a recent canoe landing on the eastern beach.

957: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is . A recluse who has fled from creditors is living in a camp on the west side of the atoll.

958: This small island, 15 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sea cave on the southern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable

features. A treasure seeker with a secret map is living in a small hut on the highest point of the island. A closer look will reveal a patch of quicksand near a stream to the west.

959: This small island, 20 square miles in area, surrounds an active volcano (30% chance of eruption). It is nearly rectangular in shape, with a sea cave on the eastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a cave, and high cliffs. A mutinous sailor who was marooned here is living in a lean-to on the highest point of the island. A closer look will reveal some random flotsam and jetsam on the western beach.

960: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a grass hut on the southeast side of the atoll.

961: This large island, 143 square miles in area, surrounds an active volcano (5% chance of eruption). It is roughly rectangular in shape, with a cove on the northeastern side. Its vegetation consists of open forest. There are several freshwater streams. The only feature of note is a small native village. Exploration will reveal a bare footprint on the northeastern beach, and a patch of quicksand near a stream to the southeast.

962: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. The only feature of note is a very fine beach. A stowaway who was marooned here is living in a flimsy hut on the east side of the atoll. Exploration will reveal nothing else interesting.

963: This large island, 173 square miles in area, is mountainous, and has three active volcanos. It is nearly oval in shape, with a sheltered lagoon on the southern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a cave, a swampy area, a small native village, and a mysterious shrine that appears to have had offerings left within the past few months. A closer look will reveal some random flotsam and jetsam on the western beach, and a crude grave marker on the southwestern end of the island. Digging there reveals only a few old bones.

964: This small island, 15 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a small freshwater spring. It has no notable features. A shipwrecked castaway is living in a rough hut on the highest point of the island. A closer look will reveal nothing else interesting.

965: This large island, 164 square miles in area, is mountainous, and has two active volcanos. It is generally rectangular in shape, with a sea cave on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, a small native village, and a swampy area. An exiled noble from a nearby country is living in a lean-to on the northern shore. Exploration will reveal a seabird rookery on some offshore rocks to the south, and a patch of quicksand near a stream to the northeast.

966: This medium-sized island, 96 square miles in area, surrounds an apparently extinct volcano. It is generally oval in shape, with a sea cave on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include high cliffs, and a small native village. A closer look will reveal a cooking pit containing charred wood and clam shells on the western beach.

967: This large island, 155 square miles in area, surrounds an apparently extinct volcano. It is long and narrow in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. It has no notable features. A prisoner of pirates who was marooned here is living in a flimsy hut on the highest point of the island. Exploration will reveal some random flotsam and jetsam on the western beach, and a bottle enclosing a message washed up on a northwestern beach.

968: This medium-sized island, 99 square miles in area, is mountainous, and has two active volcanos. It is roughly

rectangular in shape, with a barren islet offshore on the northern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a very fine beach, a mysterious shrine that appears to have had offerings left within the past few days, and a coral sculpture of a crab at the center of the island. A shipwrecked castaway is living in a small hut invisible from the shore on the northern side of the island. Exploration will reveal nothing else interesting.

969: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is generally circular in shape, with a cove on the southeastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a coral sculpture of a chief facing toward the sea on the southern shore, and a rock outcrop shaped like a skull on the east end of the island. A madman who lost his reason due to great emotional trauma and thinks he is preparing to conquer the world, but is really someone who came here seeking religious enlightenment, is living in a crude hut invisible from the shore on the southern side of the island.

970: This huge island, 364 square miles in area, is mountainous, and has three active volcanos. It is almost oval in shape, with a cove on the northern side. Its vegetation consists of a dense jungle. The only water that may be present is rainwater caught in temporary pools. Notable features include a volcanic crater with a lava lake and fire fountains, a very fine beach, a swampy area, and a coral sculpture of an unrecognizable being facing west at the highest point of the island. Exploration will reveal a population of brightly-colored crabs, and some random flotsam and jetsam on the southeastern beach.

971: This small island, 10 square miles in area, surrounds an active volcano (15% chance of eruption). It is nearly oval in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include weird ancient ruins, a lava tube cave, a swampy area, and a coral sculpture of an unrecognizable being facing south at the center of the island. Further examination will reveal nothing else interesting.

972: This medium-sized island, 96 square miles in area, surrounds an apparently extinct volcano. It is roughly rectangular in shape, with a cove on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a small native village, and a cave. A madman who lost his reason due to great emotional trauma and thinks he a scientist who was studying the biology of the island, but is really hiding from an enemy, is living in a tent invisible from the shore on the southern side of the island. Further examination will reveal nothing else interesting.

973: This large island, 176 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly rectangular in shape, with a barren islet offshore on the northeastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There are several freshwater streams. It has no notable features. A recluse who is hiding from an enemy is living in a tent on the highest point of the island. Further examination will reveal traces of a decades-old shipwreck on the northeastern shore, and a substantial amount of driftwood on the northern beach.

974: This medium-sized island, 81 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is almost oval in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. The only feature of note is a small native village. A prisoner of pirates who was marooned here is living in a crude hut near the highest point of the island. Exploration will reveal a crate containing various books, ruined by salt water, washed up on the northwestern beach.

975: This medium-sized island, 90 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is long and narrow in shape, with a jutting spit of land on the southwestern side. Its vegetation consists of palm trees, grass, and a few tough bushes. There is a freshwater stream. It has no notable features. A closer look will reveal a human skeleton in the eastern part of the island. There is a pirate outpost here, occupied by 7 pirates. A pirate ship is anchored offshore, temporarily adding its crew to the population.

976: This huge island, 389 square miles in area, is mountainous, including an apparently extinct volcano. It is roughly rectangular in shape, with a barren islet offshore on the northern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. Notable features include a small native village, another small native village, a rock outcrop shaped like a skull on the east end of the island, a mysterious shrine that appears to have had offerings left within the past few days, and a very fine beach. Exploration will reveal a bare footprint on the eastern beach, and a cooking pit containing charred wood and clam shells on the southern beach.

977: This large island, 166 square miles in area, surrounds an active volcano (30% chance of eruption). It is almost rectangular in shape, with a cove on the southwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a lava tube cave, a mysterious shrine that appears to have had offerings left within the past few weeks, mysterious ancient ruins, and a very fine beach. Further examination will reveal a population of oddly rectangular crabs, and a cooking pit containing charred wood and clam shells on the southwestern beach. There is a pirate outpost here, occupied by 6 pirates. A pirate ship is anchored offshore, temporarily adding its crew to the population.

978: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is almost rectangular in shape, with a sea cave on the eastern side. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include anomalous ancient ruins, a rock outcrop shaped like a monkey on the northeast end of the island, and a wooden sculpture of a canoe at the center of the island. A shipwrecked castaway is living in a grass hut invisible from the shore on the northeastern side of the island.

979: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is approximately oval in shape, with a jutting spit of land on the northeastern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a wooden sculpture of a local legendary figure facing west at the highest point of the island, mysterious ancient ruins, and a very fine beach.

980: This large island, 168 square miles in area, surrounds an apparently extinct volcano. It is irregular in shape, with a sheltered lagoon on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a lava tube cave, high cliffs, and a cave. A closer look will reveal a patch of quicksand near a stream to the north, and a population of enormous crabs. There is a small pirate base, with 31 permanent residents, on this island. Two pirate ships are anchored offshore, temporarily adding their crews to the population.

981: This large island, 164 square miles in area, is mountainous, and has two active volcanos. It is almost circular in shape, with a cove on the northern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a small native village, a lava tube cave, high cliffs, another small native village, and a volcanic crater with a lava lake and fire fountains. A treasure seeker with a secret map is living in a tent on the southeastern shore. A closer look will reveal some random flotsam and jetsam on the southwestern beach, and mysterious text chisled into a rock on the eastern end.

982: This small island, 19 square miles in area, surrounds an apparently extinct volcano. It is almost circular in shape, with a sea cave on the northeastern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a small native village, and a cave. A treasure seeker with a secret map is living in a lean-to on the western shore. A closer look will reveal a human skeleton on the northwestern beach.

983: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. Notable features include a coral sculpture of a whale at the center of the island, and a small native village. A closer look will reveal nothing else interesting.

984: This medium-sized island, 97 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a sheltered lagoon on the southeastern side. Its vegetation consists of bushes and scattered clumps of palm trees.

There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a small hut invisible from the shore on the northeastern side of the island. A closer look will reveal a population of exceptionally large crabs.

985: This tiny island, 3 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a sea cave on the eastern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. It has no notable features.

986: This small island, 23 square miles in area, surrounds an active volcano (25% chance of eruption). It is generally circular in shape, with a cove on the western side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. Notable features include a swampy area, a small native village, and a cave. A recluse who is studying the archaeology of the island is living in a camp on the southwestern shore. A closer look will reveal a bare footprint on the western beach.

987: This large island, 158 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is irregular in shape, with a barren islet offshore on the western side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a stone sculpture of a squid facing east at the center of the island. A shipwrecked castaway is living in a crude hut near the highest point of the island. Further examination will reveal hot spring on the northwest side of the volcano, and a substantial amount of driftwood on the northeastern beach.

988: This large island, 165 square miles in area, is mountainous, and has two active volcanos. It is roughly circular in shape, with a cove on the western side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include strange ancient ruins, a lava tube cave, a 127-foot-tall waterfall, a valley of living prehistoric creatures, and a mysterious shrine that appears to have had offerings left within the past few months. A closer look will reveal a population of brightly-colored crabs, and mysterious text chisled into a rock on the northwestern end. There is a pirate town, with 322 permanent residents, on this island. Six pirate ships are at the docks, arriving, or departing, temporarily adding their crews to the population.

989: This tiny island, 3 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a sea cave on the northwestern side. Its vegetation consists of open forest. There is a small freshwater spring. Notable features include a rock outcrop shaped like a skull on the east end of the island, and a mysterious shrine that appears to have had offerings left within the past few weeks.

990: This tiny island, only a few acres in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. It has no notable features. A shipwrecked castaway is living in a crude hut on the southwest side of the atoll.

991: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. The only feature of note is a mysterious shrine that appears to have had offerings left within the past few weeks. A shipwrecked castaway is living in a grass hut on the west side of the atoll. Further examination will reveal a bottle enclosing a message washed up on a northwestern beach.

992: This small island, 16 square miles in area, surrounds an active volcano (25% chance of eruption). It is almost rectangular in shape, with a sea cave on the northern side. Its vegetation consists of bushes and scattered clumps of palm trees. There is a small freshwater spring. Notable features include a small native village, disturbing ancient ruins, and another small native village. Exploration will reveal marks of a recent canoe landing on the northeastern beach.

993: This medium-sized island, 87 square miles in area, is mountainous, and has three active volcanos. It is generally rectangular in shape, with a sheltered lagoon on the southwestern side. Its vegetation consists of open

forest. There are several freshwater streams. Notable features include mysterious ancient ruins, a 100-foot-tall waterfall (with a cave behind it), a giant crocodile, and a mysterious shrine that appears to have had offerings left within the past few weeks. Further examination will reveal nothing else interesting. There are signs that pirates have visited this island, but there are none here now.

994: This huge island, 381 square miles in area, is mountainous, and has four active volcanos. It is roughly rectangular in shape, with a sheltered lagoon on the eastern side. Its vegetation consists of a dense jungle. There are several freshwater streams. Notable features include a small native village, a mysterious shrine that appears to have had offerings left within the past few weeks, and a lava tube cave. A recluse who has fled from creditors is living in a small hut in the jungle on the northwestern side of the island. Exploration will reveal some random flotsam and jetsam on the northeastern beach, and a cooking pit containing charred wood and clam shells on the northeastern beach.

995: This medium-sized island, 91 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is nearly oval in shape, with a sea cave on the northern side. Its vegetation consists of a few palm trees along the shore. There is a small freshwater spring. It has no notable features. A mad scientist is living in a flimsy hut on the highest point of the island. Further examination will reveal a population of oddly rectangular crabs.

996: This large island, 167 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is generally rectangular in shape, with a barren islet offshore on the eastern side. Its vegetation consists of a few palm trees along the shore. There are several freshwater streams. Notable features include a coral sculpture of a crab at the center of the island, and a rock outcrop shaped like a skull on the east end of the island. A treasure seeker with a secret map is living in a tent on the highest point of the island. Exploration will reveal a bottle enclosing a message washed up on a western beach, and a human skeleton in the southwestern part of the island.

997: This large island, 161 square miles in area, is made up of jutting rocks surrounded by a barrier reef. It is irregular in shape, with a sea cave on the southwestern side. Its vegetation consists of bushes and scattered clumps of palm trees. There are several freshwater streams. It has no notable features. A treasure seeker with a secret map is living in a tent invisible from the shore on the eastern side of the island. Exploration will reveal a human skeleton on the southern beach, and a seabird rookery on some offshore rocks to the east.

998: This huge island, 363 square miles in area, surrounds an apparently extinct volcano. It is generally rectangular in shape, with a cove on the northwestern side. Its vegetation consists of open forest. There are numerous freshwater streams and a pond. The only feature of note is a very fine beach. A treasure seeker with a secret map is living in a tent invisible from the shore on the western side of the island. Exploration will reveal some random flotsam and jetsam on the northern beach, and a population of exceptionally large crabs.

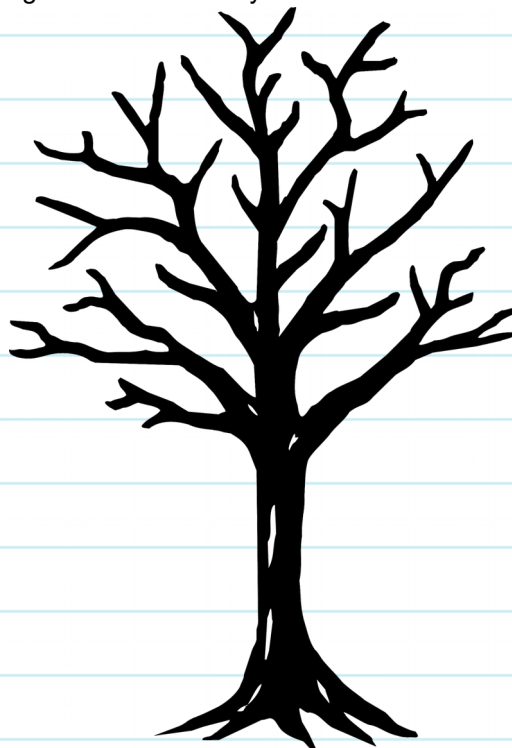

999: This small island, right around 1 square mile in area, is a coral atoll with no terrain more than a few feet above sea level. Its vegetation consists of palm trees, grass, and a few tough bushes. The only water that may be present is rainwater caught in temporary pools. Notable features include weird ancient ruins, and a very fine beach. A recluse who is hiding from an enemy is living in a camp on the east side of the atoll. Further examination will reveal some random flotsam and jetsam on the eastern beach.

1000: This tiny island, right around 1 square mile in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is long and narrow in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of a few palm trees along the shore. The only water that may be present is rainwater caught in temporary pools. Notable features include a stone sculpture of a chief facing west at the highest point of the island, a very fine beach, and a rock outcrop shaped like a monkey on the west end of the island. A shipwrecked castaway is living in a rough hut on the western shore.

1001: This large island, 173 square miles in area, is made up of jutting rocks, which are the mostly-submerged remains of a long-extinct volcano, surrounded by a barrier reef. It is nearly oval in shape, with a barren islet offshore on the northwestern side. Its vegetation consists of open forest. There are several freshwater streams. Notable features include a mysterious shrine that appears to have had offerings left within the past few days, and a small native village. Exploration will reveal a bare footprint on the northeastern beach, and a crude grave marker on the

northwestern end of the island. Digging there reveals only a few old bones.
